Allan, John	-	-	2	3	.	.
Allan, James B.	Helensburgh, Quoad Sacra S.	Dumbarton	3	2	.	.

* The students are *classed*, at the end of each year of training, according to the result of the examinations passed by them, but are not *certificated*. No certificate of merit is granted to a student, as a teacher, until he has been for two years in charge of the same elementary school, and has been twice reported on, as the teacher of it, by Her Majesty's Inspector. Whether he is to be entitled to a certificate, and of what class, is determined by the tenor of those reports, and by the result of his examination previous to quitting the normal college. If the first report be favorable, he is paid for the first year on the scale of the lowest class. If the second report be favorable, his augmentation and class of certificate is fixed for the next five years. After which interval, and so on from time to time, the certificate and augmentation are open to revision, according to the character of the intermediate reports. The value of the certificate, in the first instance, is not fixed higher than the first division of the third class, for any student who has resided less than two years at a normal college under inspection.—(Minute of 20 August 1853, s. 11.)

CLASS LIST

Of Students in Normal Colleges, and Teachers in Elementary Schools, examined before Her Majesty's Inspectors of Schools, at Christmas 1856.

The letter (D.), *after a Student's or Teacher's name, indicates that he has obtained a Certificate of Competency as a Teacher of Drawing.—*(*Minute of* 28 *January* 1854.)

*** A prize for proficiency in Drawing has been awarded to every Candidate to whose name an asterisk (*) is prefixed.

ENGLAND AND WALES.

I. MALE TRAINING COLLEGES.

Battersea.

Students of the Second Year.

FIRST CLASS.

Ashton, Philip.
Bennett, Robert.
Cubbin, John.
Dawson, James.
*Emery, John (D.)
French, Robert James.
Harrap, Thomas.
*Heap, Charles John.
Howitt, Charles.
Hutton, William.
Jennings, John.
Kay, James.
*Moss, James.
*Robinson, John E.
*Swaine, Absalom R.
Tetley, John Henry.
Thomas, John.
*Veecock, James.

SECOND CLASS.

Beaumont, Thomas.
Bowden, Edward R.
*Church, George.
*Emmerson, John.
Garaway, Francis.
Gledhill, Joseph.
Howarth, Edwin.
Knowles, William.
*Large, James J.
Latter, William.
Long, Thomas.
*Onn, William T.
Rayner, George.
Thomas, William.
*Timm, Thomas.
Ward, William.

THIRD CLASS.

Day, William S.
Lodge, Charles.
*Maddern, Richard.
Wilson, Edwin.

Students of the First Year.

FIRST CLASS.

Barton, George.
Brewer, Robert F.
*Chambers, William O.
Cooper, Henry.
Cross, George R.
*Daniel, Evan.
Halliwell, Edwin.
*Hill, John.
Hopping, Charles J.
*Lawson, James.
Major, Henry.
*Maytum, William J.
*Mensing, Thomas W.
Morse, Thomas.
*Sargent, John R.
Todd, John.
*Ullyett, Henry.

SECOND CLASS.

Aishton, John.
Augwin, Benjamin.
*Barrington, William J.
*Bartholomew, Robert.
Burnett, Edward.
Cavill, John I.
Chalk, Joseph.
Chaplin, Robert W.
Chick, James.
Cobham, James.
Dell, Joseph.
*Fillingham, William.
*Garnon, William.
*Glover, Henry.
Green, Samuel.
Hamilton, William H.
Jones, Joseph T.
Jones, William.
*Leader, Leonard M.
Line, John.
*Lloyd, William.
Napper, Edwin W.
*Pratt, Henry.
Robertson, John.
Salter, Moses.
Sinclair, James B.
Smith, Henry W.
Smith, John A.
*Snelus, George J.
Tabraham, George.
*Wilson, James.

THIRD CLASS.

Bill, John.
Daddo, William.
Davies, Charles.
Hannaford, John.
Henwood, Henry.
Jay, William.
Killingbeck, James.
*Marsh, William.
Roberts, Thomas.
*Wall, Christopher.
Walker, Michael T.

SCHEDULE.

Darley, William.
Large, Herbert.
*Newton, William H.
Parker, John.
Stephenson, Jackson.

Whaley, John Walmsley.

SECOND CLASS.

*Fewings, John Annely.
Rooke, George.
*Whitehead, Eli.

THIRD CLASS.

Bird, Edward.

Students of the First Year

FIRST CLASS.

*Balchin, Richard.
*Brown, John Stanley.
*Burrows, Richard.
*Catchasides, William.
*Collett, John.
*Davies, Dan Isaac.
*Eckersall, William.
Floyd, William.
*Haysman, David.
*Ingamells, Joshua.
*Jarvis, William.
*Jones, Ebenezer Lloyd.
*Naish, Charles.
*Ogden, Thomas.
*Pearce, Alfred James.
*Smith, Henry.
*Steane, John.
*Tinker, Henry.
*Woolnough, Wm. Harewell.

SECOND CLASS.

*Allen, Thomas Painter.
*Crossman, John.
*Hardy, Norton.
*Hawkins, Baines.
*Hay, Robert.
*Horton, William.
Jones, David.
*M'Michael, David.
*Nunweek, Richard.
Presley, James Thomas.
*Simpson, John Thomas.
*Uren, Henry Francis.
*Vipond, James.
*Vivian, William John Rowe.
*Webb, Frederick John.
Willett, Samuel.
Williams, Griffith.

THIRD CLASS.

Bartlett, James Michael.
*Chamberlain, Jos. Ananias.
*Dixon, Henry.
*Grayston, John.
Griffiths, James.
*Jones, John.

SCHEDULE.

Burn, John.
Damarell, Charles Henry.
Gray, William.
Melmer, William.
Moden, Jabez.
Pilkington, John.
*Rowse, Richard Anthony.

Caermarthen.

Students of the Second Year.

THIRD CLASS.

Coppard, Denis George.
*Hartnell, William Porter.

Students of the First Year

FIRST CLASS

Rees, Griffith.

SECOND CLASS.

Davies, David Rees.
John, William.
*Powell, John.
*Smith, John.

THIRD CLASS.

Burgess, Matthew.
Dillon, James Henry.
*Page, George Alfred.
Smithies, William.
Thomas, William.
*Williams, Emanuel Evan.
Wilson, James.

SCHEDULE.

Lewis, Thomas Whittle.
Lewis, David.
Mathias, David Christmas.
Owens, William.
Routledge, James.
Williams, Joseph.
Wood, Henry.

Caernarvon.

Students of the Third Year.

THIRD CLASS.

*Davies, David.
*Roberts, Robert.

Students of the Second Year.

FIRST CLASS.

*Edwards, Thomas.

SECOND CLASS.

*Jones, Griffith.
Owen, William.
Williams, Richard.

THIRD CLASS.

Evans, Robert.
Parry, William.

Students of the First Year.

SECOND CLASS.

*Clayton, Joseph.
Harvey, John.
Lloyd, William.
Morgan, John.
Thomas, David.
Williams, Evan.

THIRD CLASS.

Edwards, Joseph W.
Hughes, Edward.
Jones, John Ebenezer.

SCHEDULE.

Jones, William.
Morris, Thomas.

Chelsea (St. Mark's).

Students of the Third Year.

SECOND CLASS.

Dawe, Charles Joseph.
Lee, Robert.
Veness, Thomas Robert.

THIRD CLASS.

Goodwin, William Henry.

Students of the Second Year.

FIRST CLASS.

*Nash, William.
Thorne, Joseph.

SECOND CLASS.

Briggs, William.
Cowdell, Samuel.
Day, William.
Hall, John.
*Hunt, Frederick Goodman (D.)
Powell, William.
Roberts, Robert.
Snell, Robert.

THIRD CLASS.

Craven, Joseph.
Draper, Elijah.
Dyson, William.
Glover, Alfred Walker.
*Owen, William.
*Smith, Hercules.
Stott, Charles Henry.
Tate, Joseph.

Students of the First Year

FIRST CLASS.

Cook, James.
Cuttance, John Francis
*Jenkin, William G.
Lakin, Thomas.
*Masters, John.
Perkins, Thomas.
Smith, Joseph Henry.
Thatcher, Geo. Ferdinand.
*Walker, Walter.
Welsh, James.
Wright James.

SECOND CLASS.

Amps, James Henry.
Barnacle, John.
Binns, Michael.
Craddock, Edw. William.
Dew, John.
Dove, Kershaw.
Fairman, John Benjamin.
Field, Ebenezer.
*Freeman, Allen.
Minkley, George.
*Newnham, John William.

Durphy, Richard - Blackburn, St. Ann's R. C. S.
Maguire, Edward - Preston, St. Winfred's R. C. S.

EXAMINATION PAPERS.

1. For Candidates for *Queen's Scholarships;* Christmas 1856.
2. For *Male Students* in *Training Colleges* (in First, Second and Third Years); Christmas, 1856.
3. For *Female Students* in *Training Colleges;* Christmas, 1856.
4. For *Teachers* being Candidates for *Registration,* or for *Infant-School Certificates;* Easter, 1856.
5. For Candidates for *Lecturerships* in *Training Colleges;* Easter, 1856.

(No. 1.)

EXAMINATION OF CANDIDATES FOR QUEEN'S SCHOLARSHIPS.

CHRISTMAS, 1856.

Candidates are advised to begin by reading the questions through to the end, before they attempt to answer any of them.

Candidates are not expected to answer all the questions. Far higher marks will be gained by a few accurate and sensible answers than by a great number of indifferent attempts.

Candidates will do well to answer those questions first *which they* feel best able to answer. *The answers should (as far as possible) be* begun to be written *opposite to the questions to which they refer. If, in any case, candidates cannot conveniently comply with this direction, they should head the answer thus:—" Question, No. "*

All the answers are to be written on this paper. Answers written on any other paper will not be looked over.

The following table must be carefully filled up:—

Your Christian Name and Surname, in full, *and the* current *Year of your Age.*	*The Name of the Training College at which you are now being examined.*	*The Name of the School in which your Apprenticeship was served. If you have not been a Pupil-teacher, state so.*

RELIGIOUS KNOWLEDGE.

(Three Hours allowed for this Paper.)

In each of the first four Sections, you may not take more than one question to answer.

Section 1.

1. Give the names of the Judges of Israel, with dates, and a short history of one of them.
2. Mention the points of difference between the Captivity of the Kingdoms of Israel and Judah respectively, as narrated in the Old Testament.
3. Write out a short history of the Jews, from the dedication of the second Temple to the coming of Christ.

Section 2.

1. Enumerate the different Herods mentioned in Holy Scripture, with a short account of each.
2. Explain the following terms:—Proselyte of the Gate; Proselyte of the Covenant; Publicans; Scribes; Stoics; Tetrarch.
3. Describe the way in which each Evangelist commences his Gospel.

Section 3.

1. "Pray without ceasing." Write out the notes of a lesson on this text.
2. On what lessons from Holy Scripture would you chiefly dwell, in teaching a child to love God?
3. "Give us this day our daily bread." How is the full meaning of this explained in the Church Catechism? Illustrate it, as to your first class, from examples in the Old Testament.

Section 4.

1. Write out (as nearly as you can in the words of Scripture) *one* of the following parables:—
   (*a*) The Wise and Foolish Virgins. (*b*) The Prodigal Son.
   (*c*) The House on the Sand, and the House on the Rock.

   Explain the parable which you write out.
2. What were the words of our Lord (*a*) about little children; (*b*) the lilies of the field; (*c*) God and Cæsar; (*d*) the Resurrection; (*e*) the Devil?
3. Enumerate the chief events which occurred to St. Paul (*a*) at Antioch; (*b*) Iconium; (*c*) Philippi; (*d*) Athens; (*e*) Corinth; (*f*) Ephesus; (*g*) Jerusalem; (*h*) Cæsarea.

   Draw an outline map of the Eastern end of the Mediterranean Sea, and write the names of these places in the proper parts.

Section 5.

1. Write out the questions and answers relating to Baptism in the *first* portion of the Catechism.
2. Why is Baptism explained twice over in the course of the Catechism? What particulars, *exactly*, are contained in the first account of Baptism, and not in the second? What in the second, and not in the first?
3. "Thou art not able to walk in the commandments of God, nor to serve him, without his special grace."

   What does "special grace" signify in this passage? What means does the Catechism teach us of obtaining special grace?

Section 6.

1. What (*describe them*) are the Collects used in the order of Morning Prayer? What in the order of Evening Prayer?

2. In what part of the Daily Service does the General Thanksgiving come?
3. When is the Prayer for the High Court of Parliament to be used, and when not?
4. When is the Prayer for all conditions of men to be used, and when not? Why so?
5 How does each of the three last-mentioned Prayers begin?

GRAMMAR.

(Three Hours allowed for this Paper.)

1. Paraphrase the following passage (*the more briefly* you can express *the same sense* in different words, the better will your answer be reckoned).

[Throughout this paper, whenever *examples* are called for, it is preferred that you should find them in this passage.]

"Our *next-door* neighbour at my father's house had been a carpenter. *Fresh* from the *sort* of *reading* I have mentioned, I was eager to *examine his* tools, *their* powers, and *their* uses. This carpenter was a man of a strong and vigorous mind; and, his faculties *having been* chiefly *confined* to the range of his profession, *he* was fertile in experiments and ingenious in reasoning *upon* these particular topics. I *therefore* obtained from him considerable satisfaction; and, my *mind* being set in action, I sometimes *even* improved upon the hints he furnished. His conversation was particularly agreeable *to me*. I *at first* worked with him for *my* amusement, and afterwards *for a short time* as his journeyman. I was constitutionally vigorous, my bones well knit, and my limbs sinewy and powerful; and, by the experience *thus* attained, I added to the abstract possession of power the skill *of applying it* when I pleased, in such a manner as that no part should be inefficient."

2. Parse the words printed in italics.

3. "Our next-door neighbour at my father's house had been a carpenter."

Divide this sentence into *subject, copula, predicate.*

In the subject, distinguish the substantive from the attributive parts.

4. Enumerate the different kinds of pronoun. Decline such pronouns as admit of declension.

5. "I sometimes even improved upon the hints he furnished."

Is this a complete construction? If not, complete it; parse whatever you insert, and give the name of the grammatical figure which denotes the omission of words.

6. Write out the following words, so as to mark by hyphens the *root*, and the *affix* or *prefix*. Draw a line in each case under the root:

neighbour,	profession,	obtained,	occasionally,
vigorous,	experiment,	conversation,	sinewy,

Is there anything different from the rest to remark about the additions to the root in the word "obtained"?

7. Correct the mispelling which appears in any of the following instances:—

procede,	fullfilling,	greatful,	harrass,
exceed,	fulfil,	believe,	embarass,
recede,	fulfill,	greive,	ribbon,
analagous,	jenerous,	recieve,	missconduct.

8. What are *moods* and *tenses?* Exhibit the whole of them in a connected and systematic arrangement, and explain it.

9. Show by examples how the auxiliary verbs *to be* and *to have* are used in distinguishing the active from the passive voice, and the past or imperfect from the present time, in other verbs.

10. "This carpenter was a man *of a strong and vigorous mind.*" Which of these words might be omitted without injury to the sense or grammar?

How would you change the rest of the sentence so as to turn the words printed in italic from the *possessive* to the *objective* case?

How would you change it so as to make *strong and vigorous* the predicate?

11. Give the derivation and literal meaning of *journeyman.* Make it the occasion of explaining one of the sources from which modern English is derived.

12. Classify the letters of the alphabet, and point out the uses, in teaching etymology, which may be made of such classification.

13. (*a*) Adjectives are said to *qualify* nouns, adverbs to *modify* verbs; explain the meaning of these terms.

(*b*) Those verbs are said to be intransitive, in which "*the action does not pass over from the agent to the object.*" Explain the words in italics.

(*c*) Conjunctions are said to be "parts of speech which join words and sentences together." Examine the accuracy of this definition.

Find examples, in each case, from the passage given for paraphrase.

14. As there is no difference in the *form* of the word between the nominative and objective case of nouns, how can it be ascertained that transitive verbs and prepositions in English govern the objective case?

15. Which of the parts of speech have the effect of *abbreviating* language? Give examples.

GEOGRAPHY AND HISTORY.

(Three Hours allowed for this Paper.)

GEOGRAPHY.

1. Draw a map of the coast of Wales, showing the course of the rivers descending to it, and the mountains in which they take their origin.

2. Draw a map of the Mediterranean Sea, naming in it the chief islands, ports, and river-mouths.

3. Give some account of New Zealand, mentioning the size, shape, and position of the islands, with the principal settlements in them.

4. Describe the chief physical features of South America.

5. State, as far as you are able, the latitude and longitude of the following places and their distance from London, giving a full account of one of them—

Moscow, Calcutta, Quito, Archangel, Venice, Sierra Leone, Canton, Buenos Ayres.

6. In what countries are the sugar-cane, the cotton-plant, tea, coffee, and rice chiefly grown? Say what kind of climate and soil is required for each.

HISTORY.

1. Show some great differences between the Saxon and Norman invasion and occupation of England.

2. Name, with dates, the principal events in the reign of Henry II.; describe more fully one of them.
3. Give a short account of the state of the kingdom at the accession of Henry VII.
4. Under what circumstances and with what results was the Union of the Crowns of England and Scotland effected? Trace the descent of the first king of Great Britain.
5. Relate, as far as you can, how the woollen manufacture was introduced into England, and its subsequent progress.

(For Females only.)

6. Write a short account of one of the following personages:—

Philippa of Hainault,	Lady Jane Grey,
Joan of Arc,	Lady William Russell.

SCHOOL MANAGEMENT,

(Three Hours allowed for this Paper.)

Write the first line of your first answer as a specimen of copy-setting in large-hand; *and the first line of your second answer as a specimen of copy-setting in* small-hand.

1. Show how the time-table of a school should be drawn up, so as to exhibit the time given weekly to each subject taught in each class.
2. What explanation would you give of the following terms, as applied to the management of a school?

Discipline.	Standard of instruction.	Divisions.
Organization.	Principle of classification.	

3. In some schools the children stand during all but the writing lessons; in some they sit during all the lessons. What fault may be found with each of these practices, and what arrangements may be substituted instead?
4. A good school register ought to show at *any time* how long each child has actually attended a school since its first admission. What entries would be necessary to give this information in the case of children placed on the register of a school in 1854?
5. Why should a school register show for every week, (*a*) the average number present during the week, and (*b*) the total number who have been present even once during the week?
6. At what time of the day was the attendance registered in the school in which you were apprenticed? How was it done? What would have been difference in the average attendance for the year if the registers had contained only the number present at the time fixed for coming into school?
7. Were particular classes placed in your charge during your apprenticeship? For what periods did you take charge of them? By whom, and in what manner, were you superintended and directed in this practical part of your instruction?
8. What arrangements were made for your lessons out of school hours during your apprenticeship? Should you adopt precisely the same plan, if you had the charge of pupil-teachers in a school of your own? Give your reasons.
9. Did any industrial employment form part of the business of the school in which you were apprenticed? With what kind of industrial work would it be most useful for masters and mistresses to be familiar?
10. State (*a*) for what lessons, and (*b*) in what way, you would use the black-board?
11. What is a dictation lesson, and what are the advantages of it?
12. In teaching the first elements of arithmetic, what means would you use besides figures on the slate or black-board?

MUSIC.

1. Classify the orders of measure or kinds of time most commonly employed in musical compositions, and explain the difference between relative and absolute time.
2. Write out as many major diatonic scales or keys as you are able, prefixing to each its appropriate signature.
3. Show on a staff of eleven lines the average compass of each register of voice, and represent each register separately on a staff of five lines, with its proper clef.

ARITHMETIC.

(Three Hours allowed for this Paper.)

1. How many miles will a wheel, whose circumference is 16½ feet, traverse in 7,825 revolutions? $\frac{5}{8}$
2. What sum of money will be required to allow 359 persons each 3*l*. 6*s*. $10\frac{8}{55}\frac{8}{6}d$.? Prove the work.
3. The purchase money of a parcel containing 907 articles of equal value is 1,703*l*. 9*s*. $2\frac{1}{4}d$., show the cost price of each article. Test the answer by multiplication and practice.
4. $40\frac{5}{8}$ yards of silk are purchased for 14*l*. 1*s*. 7*d*.; for what amount of money may $4\frac{1}{2}$ yards be purchased at the same rate?
5. A man travels 640 miles in 12 days of 16 hours duration; in how many days of 12 hours duration will he travel 720 miles?
6. Three parties agree to advance 14,280*l*. for business purposes, in the several proportions of 4, 5, 6; the clear gain is 872*l*. 10*s*. What amount of capital and gain belongs to each?
7. State exactly what is meant by the expression, "multiply $\frac{3}{7}$ by $\frac{3}{7}$?" and work the following, $2\frac{1}{13}\frac{3}{3} \times 5\frac{9}{17}\frac{9}{7} \times 7$.
8. Reduce 7*s*. 4½*d*. to the decimal of 3*l*. 7*s*. 2½*d*., and show what decimal of 1*l*. 19*s*. 4½*d*. is 10 guineas.
9. What is meant by the terms "involution" and "evolution"? Give examples in illustration of each, and work the following proposition: "A square field contains 15a. 2r. 20p.; find its side in chains."
10. The interest on 608*l*. for three years is 61*l*. 17*s*. 1½*d*.; find the rate per cent.?
11. If 12 per cent. be gained upon silk by selling it at 11*s*. 8*d*. per yard, at what price per yard should it be sold to clear 25 per cent.?
12. If 1½ lbs. of tea be worth 3½ lbs. of coffee, and 6½ lbs. of coffee worth 24 lbs. of sugar, and 7½ lbs. of sugar worth 14 lbs. of soap; how many lbs. of soap are 3 lbs. of tea worth?

13. State what books are essential to the system of "double entry," and illustrate their use, as far as may be, by the following transaction: "A country draper purchases from a Belfast manufacturer five pieces of linen, each 26 yards long, for 19*l.* 10*s.*, or 3*s.* per yard; he sells off the whole quantity at 3*s.* 6*d.* per yard.

EUCLID.

Candidates are not permitted to answer questions in more than one of the three Sections into which this Paper is divided. No marks will be given for Papers in which this direction is not observed.

Section 1.

1. If two triangles have two sides of the one equal to two sides of the other, each to each, and have likewise their bases equal, the angle which is contained by the two sides of the one shall be equal to the angle contained by the two sides equal to them, of the other.
2. If two triangles have two sides of the one equal to two sides of the other, each to each, but the angle contained by the two sides of one of them greater than the angle contained by the two sides equal to them, of the other, the base of that which has the greater angle shall be greater than the base of the other.
3. The opposite sides and angles of a parallelogram are equal, and its diagonal bisects it.
4. If the square described upon one of the sides of a triangle be equal to the squares described upon the other two sides of it, the angle contained by these two sides is a right angle.
5. If a straight line be divided into two equal parts, and also into two unequal parts, the rectangle contained by the unequal parts, together with the square of the line between the points of section, is equal to the square of half the line.
6. To describe a square that shall be equal to a given rectilineal figure.
7. If a point be taken within a circle, from which there fall more than two equal straight lines to the circumference, that point is the centre of the circle.
8. The angle at the centre of a circle is double of the angle at the circumference upon the same base, that is, upon the same part of the circumference.
9. From a given circle to cut off a segment, which shall contain an angle equal to a given rectilineal angle.
10. To describe a square about a given circle.

ALGEBRA.

Section 2.

1. Reduce to its simplest form the expression

$$(x-a)\ (x+b)\ (x-c) + a\ (x+b)\ x-c) - b\ (x-c)\ (x-a) + c\ (x+b)\ (x-c) - ab\ (x-c) - bc\ (x-a) + ca\ (x+b) - abc.$$

2. Show that when x and y are real and unequal numbers, $x^2+y^2 > 2xy$, and $x^2+y^2+z^2 > xy+yz+zx$ when x, y, z are real and not all equal.
3. Divide x^6+7x^3-8 by x^2+x-2.
Find the G.C.M. of $x^4+x^3-x^2+5x-2$ and $x^4-3x^3+6x^2-6x+4$.
5. Extract the square root of $5-2\sqrt{6}$, and the cube root of 100739·353077.
6. Solve the equations—

I. $2x-1+\frac{7x-2}{3}-\frac{3x+4}{5}=\frac{7x-4}{5}+\frac{5x+1}{3}$.

II. $\frac{ax}{b}-\frac{bx}{a}=\frac{a^2}{b}-\frac{b^2}{a}$.

III. $\frac{10x-3}{3x+1}+\frac{8x+1}{7x-11}=5\frac{1}{8}$.

IV. $\sqrt{7x+1}=\sqrt{7x-26}+3$.

V. $\begin{cases} 2x-3y=5. \\ 2x^2-3y^2=29. \end{cases}$

VI. $\begin{cases} xy+yz=21. \\ 3xy-yz=3. \\ xyz=30. \end{cases}$

7. The 5th term of an arithmetical progression is 7 and the 9th term is 13; find the 13th term and the 1st term.
8. On a line of railway the telegraph posts are placed at equal distances; a train moving uniformly passes along one of these distances in $7\frac{1}{2}$ seconds; if the number of distances in a mile were increased by 8 and the length of each distance diminished accordingly, the train would pass along one of them in six seconds; find the distance between two posts and the rate of the train per hour.

MENSURATION AND MECHANICS.

Section 3.

1. A roof, which is 35 feet 8 inches long and 18 feet 3 inches broad, is covered with lead weighing 8 lbs. per square foot: what will it cost at 1 guinea per cwt.?
2. The solid contents of a box are $58\frac{5}{8}$ cubic feet, the width is 5 feet 4 inches, and the length is three times the depth; find the length and depth.
3. How many horse-power will be required to raise $5\frac{1}{4}$ tons of coals, 75 fathoms in an hour?
4. The length of a lever, which balances of itself, is 4 feet 3 inches; the weights which balance, when hung at its extremities, are as 9 to 8; find the lengths of the arms.
5. The arms of a bent lever, inclined to each other at an angle equal to $\frac{3}{4}$ of a right angle, are moveable about its fulcrum in a vertical plane: find the relation between the weights, which will balance it when hung at the extremities of the arms, with one of the arms horizontal. (The lever supposed to be without weight.)
6. The lever of a screw is 3 feet, the distance between two threads $\frac{1}{4}$ inch; what power must be applied to the end of the lever to support an iron weight hung from the screw, in the form of a cylinder, whose diameter is one foot, and height 7 inches, $3\frac{1}{2}$ cubic inches of iron weighing 1 lb.?

7. Find the magnitude of a force which is equivalent to two forces of 5 lbs. and 12 lbs., acting together at a point at right angles to each other, and draw a figure to represent the directions of the three forces.

DOMESTIC ECONOMY.

(Three Hours allowed for this Paper.)

1. What directions would you give with respect to female clothing, in order to the *preservation of health?*—Answer this question as fully as you can.
2. State, and clearly explain, how it is that health suffers from the want of out-door exercise, and of water for the purpose of washing the body.
3. Give a recipe for *one* of the following preparations:—
   (*a*) Cheap nourishing soup, with *or* without meat, *in quantity sufficient for six persons.*
   (*b*) Oatmeal porridge.
   (*c*) Gruel.
   (*d*) A cheap bread, or other farinaceous, pudding.
4. Three of the first-class girls of an ordinary national school go out to service as housemaid, nurserymaid, and kitchenmaid respectively. Write down suitable directions for *one* of the three.
5. Do you consider that it is or is not desirable for a cottager to keep a pig, and why?
6. Would you recommend the mother of a family to go out to daily work? Give your reasons fully.
7. To what class of disorders does small-pox belong? What are its symptoms? How should it be treated until the attendance of a medical man can be obtained? What other disorders belong to the same class?
8. Supposing a chimney to be on fire, what are the best means of putting it out?
9. Mention the chief vegetable and mineral poisons from which children are especially in danger. What are the respective remedies to which immediate recourse should be had?
10. What diseases arising from want of cleanliness are commonly met with among the children of the poor? What is the proper treatment in each case?

(No. 2.)

GENERAL EXAMINATION OF TRAINING COLLEGES.

CHRISTMAS 1856.

MALE STUDENTS.—FIRST YEAR.

All your answers are to be written on this paper; answers written on any other paper will not be looked over.

You are not permitted to answer more than one question in each section.

Before beginning your answers, you are to fill up the following Table, so far as it applies to you. You will be so good as to do this, although you may not attempt to answer any part of the paper; which, in that case, you will return to the Inspector, *writing the words "not attempted" in large letters below.*

The Name of the Training College at which you are now being examined.	*Your Christian Name and Surname* in full, *and the* current *Year of your Age.*	*Do you attend this Examination as—* 1. *A resident Student?* 2. *A Teacher to be examined for a Certificate of Merit, and* from what School?	*If you are, or have been, a Student, state the Month and Year in which you entered the Training College and the Month and Year in which you left it.*

1. THE HISTORY, CHRONOLOGY, AND GEOGRAPHY OF THE BIBLE.
2. THE GOSPEL ACCORDING TO ST. MATTHEW.

(Three Hours allowed for this Paper.)

Section 1.

1. Describe the course of the Jordan.
2. What tribes or nations occupied Canaan when Abraham and Joshua, respectively, crossed the Jordan?
3. Draw a map of Syria, inserting the mountains and rivers, Antioch, Damascus, Tyre, Jerusalem, and the six cities of refuge.

Section 2.

1. Write a history of Gideon.
2. Distinguish between trespass offerings, peace offerings, and burnt offerings. Give the rules for each.
3. Give an analysis of one of the prophetical books in the Old Testament, with some account of its author.

Section 3.

1. What do we know of St. Matthew from the Bible? What is the commonly received opinion on the date, and original language of his gospel? What circumstances mark for whom it was written?
2. Mention any miracles, parables, or phrases peculiar to this Gospel.

3. Narrate the parable of the labourers in the vineyard. What circumstances led to the parable? What is its doctrinal meaning? Can you find anything parallel to it in ordinary life?

Section 4.

1. When did our Lord first begin to foretel his own sufferings?
2. Mention the occasions on which the disciples are said to have quarrelled amongst themselves. State in each case what circumstances seem to have led directly or indirectly to the quarrel.
3. Give an analysis of the Sermon on the Mount, showing its unity and coherence. What leading doctrines or precepts of the Gospel find no place in it?

Section 5.

What is the best teaching that can be given to children between the ages of seven and nine, out of the Old Testament? Illustrate your answer by a sketch of a specimen Old Testament lesson.

Section 6.

Write an explanation for a class of children between eleven and thirteen of the parables of the Leaven and the Mustard Seed. Be careful to point out the difference as well as the similarity of meaning in the two parables.

Section 7.

Write such notes on the following passage as will give an illustration of the preparation that you would make for hearing it read by your first class, and explaining it to them:—

"And when they were come to Capernaum, they that received tribute money came to Peter, and said, Doth not your master pay tribute?

"He saith, Yes. And when he was come into the house, Jesus prevented him, saying, What thinkest thou, Simon? of whom do the kings of the earth take custom or tribute? of their own children, or of strangers?

"Peter saith unto him, Of strangers. Jesus saith unto him, Then are the children free.

"Notwithstanding, lest we should offend them, go thou to the sea, and cast an hook, and take up the fish that first cometh up; and when thou hast opened his mouth, thou shalt find a piece of money: that take, and give unto them for me and thee."—*Matthew*, xvii. 24 to 27.

CATECHISM, LITURGY, AND CHURCH HISTORY OF THE FIFTEENTH AND SIXTEENTH CENTURIES.

(Three Hours allowed for this Paper.)

Section 1.

Explain, as if to a class of children between nine and eleven; illustrate by examples, and enforce by texts from the New Testament,—

Either 1. The Second Commandment;—or, 2. The Fifth Commandment;—or,
3. The Ninth Commandment.

Section 2.

Write out the explanation which is given of the Lord's Prayer in the Catechism, and comment upon it as you would to your second class, so as to make them feel its use towards understanding that Prayer.

Section 3.

1. Write such comments on the 95th Psalm as you would give to your first class, to enable them to join in it with intelligence, in the Morning Service.
2. Explain as you would to pupil-teachers the benediction at the end of the Litany. Dwell particularly on the words "grace" and "fellowship," and illustrate them from other passages in the Bible.
3. Comment on the special Psalms and lessons appointed for the Morning Service on Easter day or Christmas Day, and if you can remember one of those Psalms or Lessons in detail, give a full explanaion of it. Easter day: Proper Psalms, 2, 57, 111; proper Lessons, Exodus, 12—Romans, 6. Christmas day: Proper Psalms, 19, 45, 85; proper Lessons, Isaiah, 9 to v. 8—Luke, 2 to v. 15.

Section 4.

1. Write a life of Wickliffe.
2. Give an account of the Lollards. Were they popular or unpopular in this country, and why?
3. In what countries, if in any, was the Reformation chiefly a reformation in doctrine, in what a reformation in discipline, and in what a reformation in church government. Prove your answer by historical facts.

Section 5.

1. Give an account of Calvin and his chief followers.
2. By what steps and by what authority were the Thirty-nine Articles composed and made binding on the clergy of the Church of England?
3. What causes stopped the progress of the Reformation over Europe, and in some degree undid what had been already done?

Section 6.

1. State the practical value of Creeds and Catechisms in the education of children; and show in what manner the teacher should use these means of religious instruction.
2. Write full notes of a lesson to be given to children, between eleven and thirteen, illustrating, by events in the History of the Reformation, the Parable of the Tares.

ENGLISH GRAMMAR.

(Three Hours allowed for this Paper.)

Every candidate is required to write out the paraphrase and do the parsing. Besides this he is to choose one question in each of the other sections.

Section 1.

Paraphrase the following passage—

"For the principal aim of society is to protect individuals in the enjoyment of those absolute rights which were vested in them by the immutable laws of nature; but which could not be preserved in peace without that mutual assistance and intercourse which is gained by the institution of social and friendly communities. Hence it follows, that the first and primary end of human laws is to maintain and regulate these absolute rights of individuals. Such rights as are social and relative result from,

and are posterior to, the formation of states and societies: so that to maintain and regulate these, is clearly a subsequent consideration. And therefore the principal view of human law is, or ought always to be, to explain, protect, and enforce such rights as are absolute, which in themselves are few and simple; and then such rights as are relative, which, arising from a variety of connexions, will be far more numerous and complicated."—*Warren's Blackstone*, p. 60.

Section 2.

Parse the following sentence, and be careful to give in full the *syntax* of the prepositions, conjunctions, and pronouns.

"For all of us have it in our choice to do everything that a good man would desire to do; and are restrained from nothing but what would be pernicious either to ourselves or our fellow citizens."

Section 3.

"So that to maintain and regulate these, is clearly a subsequent consideration."

1. In what sense is the word "these" a pronoun, and in what an adjective? What is the etymology of the word "pronoun," and what is its meaning, according to that etymology? Does this imply any change in the meaning commonly attached to the word "noun?"
2. Parse the word "so." Give other instances of adverbs similarly used. Distinguish between the meaning of "so" and "as."
3. Parse the word "to." Are there any cases in which this word before an infinitive may more properly be called a preposition than a sign of the mood? In what cases is the sign of the infinitive omitted?

Section 4.

"And therefore the principal view of human law is, or ought always to be, to explain, protect, and enforce such rights as are absolute, which, in themselves, are few and simple; and then such rights as are relative, which, arising from a variety of connexions, will be far more numerous and complicated."

1. Give the etymology and etymological meaning of "explain, protect, enforce, absolute, rights, simple, relative, connexions, complicated."
2. What is the general meaning of the terminations ive, tion, an, wise, al, ty, ous? Give instances of each.
3. Analyze the above passage into subject, copula, and predicate, marking the subordinate clauses which are comprised under each of these divisions.

Section 5.

Describe accurately every step in the process of teaching the full parsing of nouns and verbs.

Section 6.

1. In what order ought children to learn to distinguish parts of speech?
2. Explain exactly the different use that you would make of the passage at the head of Section 4, in teaching grammar to pupil-teachers in the third year, to the children in your first class, and to the children in your second class.
3. How can the teaching of grammar be made of use in teaching children to write correct English? What grammatical mistakes do children and uneducated people most frequently make?

GEOGRAPHY.

(Three Hours allowed for this Paper.)

Section 1.

Describe, *in words*, the coast, the boundaries, the mountain-chains, and the river system of—
1. France; or, 2. Russia: or, 3. Hungary.

Section 2.

Describe, *in words*, one of the following coast lines:
1. North America, from the Straits of Belle Isle to New Orleans.
2. Asia from Aden to Hong Kong.
3. Europe, from Gibraltar to St. Petersburgh.

Section 3.

Draw an outline map of
1. Spain; or, 2. Greece; or, 3. Denmark.

Section 4.

1. Describe, *or* draw a map of, the basin of the Rhine.
2. Draw a map of the Mediterranean Sea.
3. Trace in words, or by a map, the water-shed which divides the northern and western from the southern and eastern drainage of Europe.

Section 5.

Write full notes, and draw such maps and illustrations as would be required, for a lesson to your first class upon the geography of—
1. South America: or, 2. Canada; or, 3. Yorkshire.

Section 6.

Write full notes of a lesson upon, and draw proper maps and diagrams to illustrate, one of the following passages, supposing it to be read by your first class:—

1. "*Lapland*, which belongs to Sweden, as you know, is perhaps the most dreary country in Europe. During a great part of their long cold winter, the inhabitants have no daylight; and in their short summer hardly any darkness: for the nearer one approaches to the north pole the longer the days and nights become. At the pole itself there are six months' darkness, and then six months' light; but in Lapland there is but a very short period in which there is no light at all, though during the whole summer the sun sets for a short time only."—*Irish* IV. Book, p. 79-80.

2. "The advantages derived from rivers as the sources of national wealth are incalculable. They feed canals, turn mills, and mingle and assist in nearly all the operations of human industry. The one hundred and ten canals which England now boasts are supplied from the exhaustless munificence of her rivers.

"Rivers are the outlets by which the wealth of a nation is conveyed to foreign realms, and the inlets by which it receives their riches in return. Places situate on a river and near the sea are therefore advantageously situated for commerce; hence most capitals and many large cities are built on the banks of rivers. It is to her position on the Thames that London is chiefly indebted for her rank as the first commercial city in the world."—*British and Foreign* IV. Book, p. 21.

3. "During the summer of the northern hemisphere, the countries of Arabia, Persia, India, and China, are much heated, and reflect great quantities of the sun's rays into the atmosphere, by which it becomes extremely rarefied, and the equilibrium consequently destroyed. In order to restore it, the air from the equatorial southern regions, where it is colder (as well as from the colder northern parts) must necessarily have a motion towards those parts. The current of air from the equatorial regions produces the trade-winds for the first six months in all the seas between the heated continent of Asia and the equator. The other six months, when it is summer in the southern hemisphere, the ocean and countries towards the southern tropic are most heated, and the air over those parts most rarefied; then the air about the equator alters its course, and flows exactly in an opposite direction."—*M'Culloch's Course of Reading*, p. 241-242.

ENGLISH HISTORY.

Three Hours allowed for this Paper.

Section 1.

Give an account of—
1. The character and government of Edward the Confessor; or,
2. The victories and subsequent expulsion of the Danes; or,
3. The steps which led to the consolidation of the Heptarchy into a monarchy.

Section 2.

Enumerate the instances in which
1. England took part in the Crusades; or,
2. England has interfered by arms to support foreign sovereigns against their subjects, or foreign subjects against their sovereigns; or,
3. England has engaged in foreign war in support of (*a*) the hereditary rights of her Sovereign, (*b*) the unity of the British Empire, (*c*) protection or extension of her commerce.

Section 3.

1. Give an account of the reign of Henry IV.
2. Give the pedigree, life, and character of Henry VII.
3. Sketch the successive attempts made by England to conquer or unite the Kingdom of Scotland.

Section 4.

1. Give a brief outline of the Wars of the Roses, and of their effects upon the country, both as regards domestic and foreign policy.
2. Give an outline of the reign of Elizabeth.
3. Write a sketch of the growth, and narrate in detail any one of the principal feats of the British Navy.

Section 5.

Write full notes, and draw proper maps or other illustrations for a lesson to be given to your first class, on
1. The wars of Edward III. in France; or, 2. The English colonization of America; or,
3. The progress of British power in India.

Section 6.

Write full notes, and draw proper maps or other illustrations to show how you would treat one of the following passages, supposed to be read by your first class:—

1. "America was discovered by Columbus in the year 1492. Several European nations, following the example of Spain, sent out ships to explore the new continent, and the beautiful countries and rich gold and silver mines they found there disposed them to try and get possession of all they could. As the nations were some of them ignorant savages, and the rest not nearly so well skilled in war as the Europeans, they were easily overcome, and numbers of them were cruelly slaughtered by the conquerors, who made themselves masters of nearly the whole continent, and kept those of the natives who were not killed in a state of bondage. After much war and bloodshed both among the Europeans themselves and with the natives, the chief part of North America remained at last divided between the Spaniards and English, and the South between the Spaniards and Portuguese. But in the year 1783, the descendants of the English who inhabited the centre of North America, separated themselves from Great Britain, and formed themselves into an independent republic called the *United States*."—*Irish* IV. Book, pp. 133, 134.

2. "In the time of Henry the Second of England Ireland was conquered, and since that period has been under the English kings. Its history is therefore blended with that of England. In the year 1800 its parliament was united to that of England.

"A great part of this island is covered with immense *bogs*. These form a remarkable feature of the country; they afford abundant supplies of peat, used by the inhabitants for fuel. These bogs are the remains of ancient forests; and large quantities of wood and the skeletons of animals have been found in them.

"The lakes of Killarney at the south-western extremity of the island are very beautiful, and will bear comparison with the finest in England or Scotland. Their banks are high, and covered with wood, and verdant islands are scattered over the surface."—*British* IV. Book, p. 82.

3. "*On the threatened Invasion in* 1803.—By a series of criminal enterprises, the liberties of Europe have been gradually extinguished, and we are the only people in the eastern hemisphere who are in possession of equal laws and a free constitution. Freedom, driven from every spot on the Continent, has sought an asylum in a country which she always chose for her favourite abode; but she is pursued even here, and threatened with destruction. The inundation of lawless power, after covering the whole earth, threatens to follow us here; and we are most exactly, most critically placed in the only aperture where it can be successfully repelled—in the Thermopylæ of the World."—*M'Culloch's Course of Reading*, p. 24.

SCHOOL MANAGEMENT.

(Three Hours allowed for this Paper.)

Write the first line of your first answer as a specimen of copy-setting in large-hand; *and the first line of your second answer as a specimen of copy-setting in* small-hand.

Section 1.

1. Describe such apparatus, and the general characteristics of such a series of reading books, as you would require to teach children to read.
2. How can the learning of reading and writing be made most effectually to tell upon each other?

3. Describe a reading lesson given to your first class, showing what methods you take to secure the five requisites of
fluency, correctness, distinctness, intelligent emphasis, and proper expression.

Section 2.

1. Describe the proper position of the body, the paper, the fingers, and the pen when writing. What is the use of regulating the position?
2. What is the advantage, and what the disadvantage, of the classification of forms introduced by Mülhauser?
3. State precisely what use is to be made of copies set on the black-board, of printed copies, and of copies set by hand in the children's books.

Section 3.

1. What have we lost by discarding the old spelling-books? and how is it to be replaced?
2. What rules would you give to a pupil-teacher of the fifth year for dictation lessons to the first class?

Section 4.

Give a concise account of every step in the process of teaching simple multiplication, both short and long.

LATIN.

(Three Hours allowed for this Paper.)

Section 1.

1. Decline *honor*, *honoris*, throughout.
2. What is the termination of the nominative case in the first, fourth, and fifth declensions? Give two instances of each.
3. In what declensions is the ablative the same as the dative? What is the difference in meaning? Are both of these cases used after prepositions? If not, which? Give three instances.

Section 2.

1. How many forms of declension are there of adjectives? Decline *velox*, *velocis*, throughout.
2. Decline ambo, unus, duo, tres, in full.
3. State the general rule for the comparison of adjectives, with instances.
   In what sense is it true to say that *melior* is the comparative of *bonus*?
   What are the positive forms of *superior*, *prior*, *inferior*?

Section 3.

1. Decline hic, ille, qui, and se.
2. Write out the present indicative of adsum, possum, prosum.
3. Write out, side by side, the terminations of the future indicative, active and passive, in each of the four conjugations.

Section 4.

1. In what particulars must a verb agree with its nominative case? Are there any exceptions?
2. What determines the case of a relative? Is the gender of a relative always the same with that of its antecedent?
3. Translate into Latin—

To know oneself [*Noscere se ipse*] is the first step [*gradus*] to [*ad*] wisdom [*sapientia*]; which, as [*ut*] it is the most difficult [*difficilis*], so [*ita*] it is the most useful [*utilis*] of all things [*omnis*].

Section 5.

1. From *what part of* the Latin verb is each of the following English words derived—
   Direction. *Student.* *Futurity.*
2. How does the learning of another language enable you more easily to understand the grammar of your own? Illustrate by instances from Latin and English.
3. What difference must be made in the method of learning a language when you wish to make it a study, and when you wish to make immediate use of it.

ARITHMETIC.

(Three Hours allowed for this Paper.)

Every question is to be worked as a model for the imitation of your first-class in working all similar questions. A correct result not obtained by a clear method will be considered of no value.

Section 1.

1. Divide $2\frac{1}{4}$ by $3\frac{1}{2}$, and add the quotient to $\frac{5}{14}$.
2. Divide ·00044408 by ·0112.
3. Add together the cube roots of ·007301384 and 32768, and divide the result by the square root of $72\frac{1}{4}$.

Section 2.

1. Make out a bill for the following articles: 3 lbs. of tea at 3*s.* 4*d.*, $4\frac{1}{2}$ lbs. of sugar at $5\frac{1}{4}$*d.*, $6\frac{1}{2}$ lbs. of butter at 1*s.* 2*d.*, $3\frac{1}{2}$ lbs. of cheese at $9\frac{1}{2}$*d.*, 2 lbs. of currants at $9\frac{1}{2}$*d.*, 6 lbs. of raisins at $8\frac{1}{2}$*d.*, and 10 lbs. of soap at 1*s.*
2. It is required to cut a piece equal to a solid foot from a plank $2\frac{1}{2}$ inches thick and 8 inches wide.
3. A besieged place, garrisoned by 10,000 men, was victualled for 27 days, but, after 9 days, 2,500 men cut their way out. How long would the provisions last the survivors, supposing the daily rations undiminished?

Section 3.

1. What is the interest of 528*l.* 9*s.* 0*d.*, for 4 months at $4\frac{1}{2}$ per cent. per annum?
2. A can reap $1\frac{1}{2}$ acres in $2\frac{1}{4}$ hours; B can reap $1\frac{1}{2}$ acres in $2\frac{1}{2}$ hours: in what time will they together reap $10\frac{1}{2}$ acres, and, if the rate of payment be 1*s.* per acre, what ought each to receive when it is done?
3. A lb. of tea and 3 lbs. of sugar together cost 6*s.*, but if sugar were to rise 50 per cent. and tea 10 per cent. the same quantities would together cost 7*s.* What is the price of each?

Section 4.

1. Find the area of a circular ring, whose internal and external diameters are 5 and 15 feet respectively.
2. How many cubic feet of water are contained in a ditch, shaped like a wedge, 120 yards long, 6 feet deep, and 4 feet broad at the top?
3. If a cubic foot of metal weighs 4 cwt. 1 qr., what will be the cost of a mile of piping made of it with a 9-inch bore and $\frac{3}{8}$ inch thick, at 10*l.* per ton?

Section 5.

Explain fully but concisely every step in your method of teaching—
1. Notation of integers;—or,
2. Notation of vulgar fractions:—or
3. Notation of decimals.

Section 6.

Explain fully but concisely every step in your method of teaching proportion, both simple and compound.

ALGEBRA.

(Three Hours allowed for this Paper.)

Section 1.

1. Add $a+b-c$, $a-(b-c)$, $a+b+c$, and $-a+b+c$.
2. Multiply $a^3+3a^2b+3ab^2+b^3$ by a^2-ab+b^2.
3. Divide $a^6-2a^3x^3+x^6$ by $a^2-2ax+x^2$.

Section 2.

1. Extract the square root of $4x^4-12x^3+25x^2-24x+16$.
2. Find the greatest common measure of $5x^3+2x^2-15x-6$ and $7x^3-4x^2-21x+12$.
3. Find the cube of $(x+\sqrt{-y^2})^{\frac{1}{3}}-(x-\sqrt{-y^2})^{\frac{1}{3}}$.

Section 3.

Solve the equations—

1. $\frac{x}{8}-\frac{x-1}{2\frac{1}{2}}=\frac{3x-4}{15}+\frac{x}{12}$.

Or, 2. $\begin{cases} x-\frac{y-2}{7}=5. \\ 4y-\frac{x+10}{3}=3. \end{cases}$

Or, 3. $\begin{cases} x+y+xy=11. \\ x^2y+xy^2=30. \end{cases}$

Section 4.

1. A farmer sells to one person 9 horses and 7 cows for 300*l.*; and to another, at the same prices, 6 horses and 13 cows for the same sum. What were the prices?
2. A bill of 25 guineas was paid with crowns and half-guineas; and twice the number of half-guineas exceeded three times that of the crowns by 17: how many were there of each?
3. Divide the number 26 into three such parts that their squares may have equal differences, and that the sum of those squares may be 300.

Section 5.

1. Write out the algebraical proof of the rule for finding the greatest common measure, and then find by first principles,—following the algebraical method, but not using algebraic symbols,—the greatest common measure of 31866 and 100110.
2. Which of the questions in Section 4 can be worked by arithmetic, and which, if any, cannot? Work out one of them without algebra, and show the exact correspondence of the arithmetical and the algebraical processes.
3. Give instances in which a schoolmaster may find a knowledge of algebra of use to him in teaching arithmetic.

Section 6.

Prove and illustrate, as you would to a pupil-teacher in his fifth year, that negative factors multiplied together make a positive product.

EUCLID.

(Three Hours allowed for this Paper.)

Section 1.

1. The exterior angle of a triangle is greater than the interior and opposite on the same straight line.
2. Straight lines which join equal and parallel straight lines towards the same parts are themselves equal and parallel.
3. The rectangle contained by the sum and difference of two lines is equal to the difference of their squares.

Section 2.

1. Angles in the same segment of a circle are equal.
2. The segment of a circle being given, to describe the circle of which it is the segment.
3. If a straight line touch a circle, and a line be drawn from the point of contact, cutting the circle, the angles between the touching line and the cutting line shall be equal to the angles in the alternate segments of the circle.

Section 3.

1. Inscribe a circle in a given triangle.
2. Describe a circle about a given square.
3. Describe an isosceles triangle, each of whose angles at the base shall be double the third angle.

Section 4.

Show how to prove experimentally to children the rule for finding the area of
1. A parallelogram, when base and altitude are given;—or,
2. A triangle, when base and altitude are given;—or,
3. A regular polygon, when one of the sides is given, and the perpendicular on it from the centre of the circumscribed circle.

Section 5.

1. Explain how you would ascertain that a pupil-teacher, who correctly repeated to you the 34th proposition of the First Book, thoroughly understood every step of the argument.
2. Explain, as to a pupil-teacher, the difference between definitions, axioms, postulates, problems, and theorems. Mention any axioms in Euclid which do not appear to be rightly classed under that head.
3. Give specimens of the very simplest deductions, such as might be used in teaching boys who had just worked to the end of the fifth proposition of the First Book.

MECHANICS.

(Three Hours allowed for this Paper.)

Section 1.

1. Define Friction and give instances of its uses.
2. What is the proportion of the power to the weight, in a combination of four levers, in which the long arms are 15, 16, 17, 18 feet, and the short arms 2, 3, 4, 5 feet, respectively, the long arms being all on the side of the power?
3. What is the proportion of the power to the weight in a compound wheel and axle employed to draw a load up an inclined plane, the length of the handle being 3 feet, the diameter of the larger axle 10 inches, that of the smaller axle 8 inches, and the inclination of the plane one foot in five, the friction being neglected?

Section 2.

1. Define the centre of gravity and show how the centre of gravity of an irregular body may be experimentally determined.
2. The breadth of a water-fall is 2 feet, the depth 1 foot, the mean velocity 50 feet per minute, the height of the fall 16 feet, what is the horse-power of the water-wheel which does $\frac{5}{6}$ of the work of the water?
3. Find the situation of the centre of gravity of six bodies, weighing 1, 2, 3, 4, 5, 6 lbs. respectively, and placed in consecutive order at the six angles of a hexagon, each of whose sides measures a foot.

Section 3.

Show precisely how you would demonstrate to your first class—
1. The principle of the lever. 2. The parallelogram of forces. 3. The laws of friction.

Section 4.

Draw a diagram and describe the action of the parts of—
1. A gas-meter;—or 2. The hydrostatic press.

Section 5.

Write full notes; state the apparatus, if any, that you would exhibit; draw the diagrams that you would put on the black-board for a lesson to your first class on the fire-engine.

MALE STUDENTS—First and Second Years.

MUSIC.

(Three Hours allowed for this Paper.)

1.—*The questions in Division II. are not to be attempted by any* candidate of the first year *who has not answered one question in each of the preceding sections. No such candidate may answer more than two of the questions in Division II.*
2.—*Candidates of the second year, and teachers in charge of schools, may not answer more than six questions, but may choose them from any part of the paper.*

Division I.

Section 1.

1. What is Music? How many different kinds of notes are there in music, and how are they distinguished? Write them on blank stave No. 1, and put their respective rests in blank stave No 2.
2. The term *Bar* is used in two senses: name them. What is meant by *Gamut, Clefs?* What is the use of clefs, and how many are there?
3. How does a ♯, a ♭, a ♮, or a point affect a note? In what way does a *diatonic* semitone differ from a *chromatic* semitone? Give an example of each in the opposite blank stave.

Section 2.

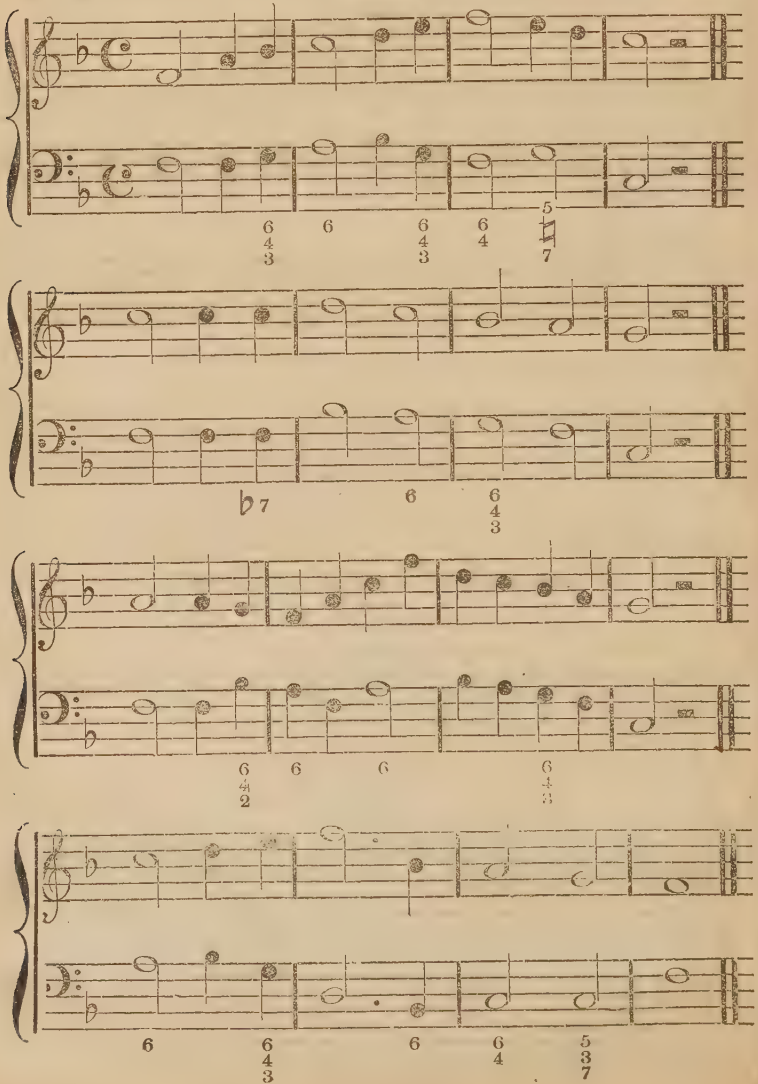
1. What is meant by *keeping time* in the performance of a piece of music? What are the various kinds of time, and how are they subdivided?
2. What is musical *accent?* How does it differ from *emphasis*, and by what mark or sign is emphasis generally expressed?
3. When is an interval said to be *inverted?*
What are the *inversions* of a major 3rd, an extreme sharp 4th, an extreme flat 7th, a perfect 5th, and a chromatic semitone?

Section 3.

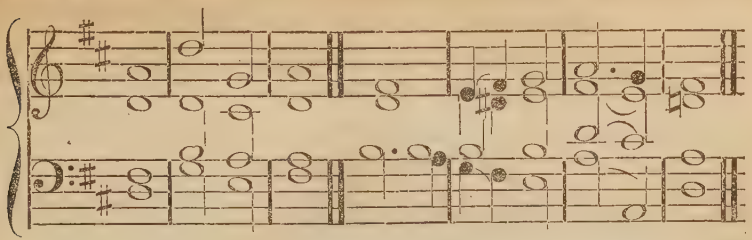
1. Explain the following terms: *tonic, supertonic, mediant, sub-dominant, dominant, sub-mediant, leading note or sub-tonic.*
The leading note or sub-tonic is called by the *French* the sensible note; why?
2. What is the meaning of syncopation? Exemplify your answer on the blank stave.
3. By what means can we best determine the key note? How can we determine whether a piece is in a major or a minor key?

DIVISION II.

1. Point out the difference between *Melody* and *Harmony?*
2. Define Modulation, Transposition, Thorough-Bass.
3. Transpose the following psalm tune into the key of D (Re), fill up the harmony, and write a verse of words according to its metre, and mark where two notes are sung to one syllable.



4. Arrange the following for the treble, alto, tenor, and bass voices, prefixing the proper clefs and signatures.

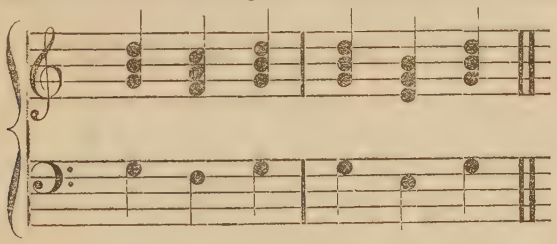


5. Name the keys with 4 sharps, 5 flats, 5 sharps, and their relative minors. What does the term *relative* mean as applied to major and minor keys?

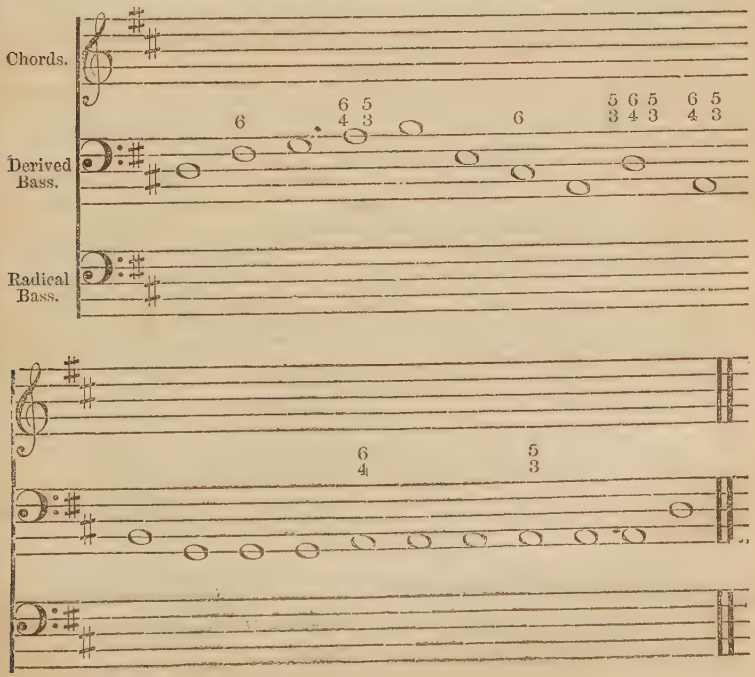
6. What is meant by common chord? In how many positions may the common chord be taken? Give an example. Can you write a common chord to every note in the scale?

7. Write common chords to the scale of D (Re), ascending only.

8. What are the progressions to be avoided in writing or playing chords? How are these faults to be remedied in the given example of consecutive fifths and octaves?



9. Fill up the following exercise, and add the radical or fundamental bass.



10. Mention some of the terms in most general use, which denote the velocity in which a piece is to be sung or played, and explain the following signs, viz.,

 & D.C.

MALE STUDENTS.—Second Year.

ACTS OF THE APOSTLES.—FIRST EPISTLE TO THE CORINTHIANS.

(Three Hours allowed for this Paper.)

Section 1.

1. Can you assign any reasons for the community of goods at Jerusalem? Was the example followed by other churches? Give the grounds of your answer.
2. What persecutions of the Christians as a body, or of any individuals or parties among them, are mentioned in the Acts? Is there any difference in character discernible between the earlier and later persecutions?
3. Enumerate the speeches or sermons recorded in the Acts, and point out the characteristics of each speaker.

Section 2.

1. Narrate the circumstances attending the conversion of Cornelius.
2. In chap. vi. v. 14, we are told that one accusation against St. Stephen was, that he had said that "Jesus of Nazareth shall destroy this place." Is there any similar accusation in the Old Testament, or elsewhere in the New? In what respects does the charge appear to have been true? How does St. Stephen's defence bear upon it?
3. Compare the accounts of St. Paul's conversion, and of his subsequent life till the Council of Jerusalem, as given in three places in the Acts, and by himself in the Epistles.

Section 3.

Write such notes as will show how you would treat the following passage, supposing it to have been read by your first class.

"And when they heard it, they glorified the Lord, and said unto him, Thou seest, brother, how many thousands of Jews there are which believe: and they are all zealous of the law:

"And they are informed of thee, that thou teachest all the Jews which are among the Gentiles to forsake Moses, saying that they ought not to circumcise their children, neither to walk after the customs.

"What is it therefore? the multitude must needs come together: for they will hear that thou art come.

"Do therefore this that we say to thee; We have four men which have a vow on them;

"Them take, and purify thyself with them, and be at charges with them, that they may shave their heads: and all may know that those things, whereof they were informed concerning thee, are nothing; but that thou thyself also walkest orderly, and keepest the law.

"As touching the Gentiles which believe, we have written and concluded that they observe no such thing, save only that they kept themselves from things offered to idols, and from blood, and from strangled, and from fornication."—*Acts of the Apostles* xxi. 20-25.

Section 4.

1. Give the probable time, place, and occasion of the First Epistle to the Corinthians, stating the reasons for each particular in your answer.
2. "All things are lawful for me." Where does this phrase occur? What does St. Paul mean by it, and how does he qualify it? What connection has it with the leading characteristics of his teaching, and how does it seem to have been abused?
3. Compare the arguments and decisions given in the eighth and tenth chapters, on the eating of meats offered to idols. How do you account for the interruption of the subject by the ninth chapter?

Section 5.

1. Explain the following passage, and its connection with its context before and after:

"Though I speak with the tongues of men and of angels, and have not charity, I am become as sounding brass, or a tinkling cymbal.

"And though I have the gift of prophecy, and understand all mysteries, and all knowledge; and though I have all faith, so that I could remove mountains, and have not charity, I am nothing.

"And though I bestow all my goods to feed the poor, and though I give my body to be burned, and have not charity, it profiteth me nothing."—1 *Corinthians* xiii. 1—3.

2. "The Jews require a sign, and the Greeks seek after wisdom." Explain the full force of these two objections to the Gospel. With which had St. Paul chiefly to contend at Corinth? To which do we find allusion made in the lifetime of our Lord? and when?
3. Explain the following passage, and its connection with its context before and after:

"For other foundation can no man lay than that is laid, which is Jesus Christ.

"Now if any man build upon this foundation gold, silver, precious stones, wood, hay, stubble;

"Every man's work shall be made manifest; for the day shall declare it, because it shall be revealed by fire; and the fire shall try every man's work of what sort it is.

"If any man's work abide which he hath built thereupon, he shall receive a reward.

"If any man's work shall be burned, he shall suffer loss: but he himself shall be saved; yet so as by fire.

"Know ye not that ye are the temple of God, and that the Spirit of God dwelleth in you?

"If any man defile the temple of God, him shall God destroy; for the temple of God is holy, which temple ye are."—1 *Corinthians* iii. 11—17.

Section 6.

Write such notes on the following passage (the Epistle for the Ninth Sunday after Trinity) as will show how you would prepare your first class thoroughly to understand it, when they heard it read in Church.

"Moreover, brethren, I would not that ye should be ignorant, how that all our fathers were under the cloud, and all passed through the sea;

"And were all baptized unto Moses in the cloud and in the sea;

"And did all eat the same spiritual meat;

"And did all drink the same spiritual drink: for they drank of that spiritual Rock that followed them: and that Rock was Christ.

"But with many of them God was not well pleased: for they were overthrown in the wilderness.

"Now these things were our examples, to the intent we should not lust after evil things, as they also lusted.

"Neither be ye idolators, as were some of them; as it is written, The people sat down to eat and drink, and rose up to play.

"Neither let us commit fornication as some of them committed, and fell in one day three and twenty thousand.

"Neither let us tempt Christ, as some of them also tempted, and were destroyed of serpents.

"Neither murmur ye, as some of them also murmured, and were destroyed of the destroyer.

"Now all these things happened unto them for ensamples: and they are written for our admonition, upon whom the ends of the world are come.

"Wherefore let him that thinketh he standeth take heed lest he fall.

"There hath no temptation taken you but such as is common to man: but God is faithful, who will not suffer you to be tempted above that ye are able; but will with the temptation also make a way to escape, that ye may be able to bear it."—1 *Corinthians* x. 1—13.

Section 7.

1. What principles should be specially borne in mind, and what practical rules should be founded upon them in the instruction of children, between 9 and 11, out of the New Testament?
2. Write a short lesson on the parable of the labourers in the vineyard, illustrating it by the case of St. Paul, and showing how well such an illustration suits the occasion which induced our Lord to give the parable.
3. Draw out a systematic course of instruction in religious knowledge for your first class, stating what you would expect them to know on entering it, and what you would expect them to know after having been in it a year.

CHURCH HISTORY.

(Three Hours allowed for this Paper.)

Section 1.

1. Give an account of the Council of Basle.
2. Give an account of Sigismond the Emperor, and Pope Nicholas V.
3. "The most dangerous moment for a bad government is usually that when it enters upon the work of reform." Illustrate this proposition in detail from the History of the Church in the fifteenth century.

Section 2.

1. Give an account of the Mendicant orders.
2. What other bodies, besides the Mendicant Orders, of a similar character, appeared in the Church about the same time? What condition of the Church does the appearance of such bodies indicate?
3. What were the characteristic features of the Benedictine, the Mendicant, and the Jesuit Orders? Give a short account of Ignatius Loyola.

Section 3.

1. Compare the opinions of Huss with those of Luther.
2. Give an account of Marc of Ephesus and Bessarion of Nice. What was the final result of the Council of Florence?
3. "The real, though secret, impulse which brought about the Reformation was the desire for freedom of thought." Examine what may be said for and against this proposition as applied to England.

Section 4.

1. Give a precise account of the First Prayer Book of Edward VI., pointing out how it differed from the present Book of Common Prayer.
2. By what steps and by what authority were the Thirty-Nine Articles composed and made binding on the Clergy of the Church of England?
3. What features in the Church of England represent the influence exercised by Foreign Protestant Bodies? and what are peculiarly English?

Section 5.

1. State the practical value of Creeds and Catechisms in the education of children; and show in what manner the teacher should use these means of religious instruction.
2. Write notes of a lesson for your first class on the Parable of the Tares, illustrating it by the History of the Church at the time of the Reformation.
3. Write notes of a lesson to be given to pupil-teachers in the fifth year on the causes and nature of the connection in this country between the Church and State.

Section 6.

Write notes of a lesson for your first class on—

1. The dissolution of the Monasteries;—or 2. The character and life of Cranmer;—or,
3. The Order for Morning Prayer.

ENGLISH GRAMMAR.

(Three Hours allowed for this Paper.)

The first and third sections refer to the Fourth Book of Milton's "Paradise Lost."

The second and fourth to Shakspeare's play of "Macbeth."

You are not at liberty to answer upon each author.

Your paper will not be read over unless it contains a paraphrase of one of the passages (including the parsing of the words in italics in the same passage).

You may take the other questions for answering at your discretion from any of the sections, but you must *not attempt to answer more than six questions* (exclusive of the paraphrase and parsing). You are advised to confine yourself, as far as possible, to the questions arising upon the passage which you paraphrase.

You are requested to answer at least two questions in Section 5.

Section 1.

MILTON.

Ah gentle pair, ye little think how nigh
Your change approaches, when all these delights
Will vanish and deliver ye to woe;
More woe, *the more* your taste is now of joy;
Happy, but *for* so happy ill *secured*
Long to *continue*, and this high seat, your heaven,
Ill fenced *for heaven to keep out such a foe*
As now is entered; yet no purposed foe
To you, whom I could pity thus *forlorn*,
Though I unpitied: league with you I seek,
And mutual amity, so straight, so close,
That I with you must dwell, or you with me
Henceforth; my dwelling haply may not please,
Like this fair Paradise, your *sense*; yet such
Accept, your Maker's *work*; he gave it me
Which I as freely give.

1. Paraphrase this passage.
2. Parse the words in *italics*, and fully explain the construction of each with the rest of the sentence.
3. In whose mouth are these words put, and on what occasion? What is the substance of the remainder of the speech.
4. Mention any phrases or images in the Fourth Book which have passed into common use.
5. What is the precise office of a preposition? Distinguish accurately between a preposition and an adverb. Have any words passed from being one to being the other? Can prepositions be compared?
6. Analyze the sentence beginning "league with you I seek" and ending "you with me henceforth."

Section 2.

SHAKESPEARE.

If it were done, when 'tis done, then 'twere well
It were done quickly: *if* the assassination
Could trammel up the consequence, and catch,
With his surcease, success; *that but* this blow
Might be the be-all and the end-all here,
But here, upon this bank and shoal of time,
We'd jump the life *to come*. *But* in these cases
We still have judgment here; *that* we *but* teach
Bloody instructions, which, *being taught*, return
To plague the inventor. This even-handed justice
Commends the ingredients of our poisoned chalice
To our own lips.

1. Paraphrase this passage.
2. Parse the words in *italics*, explaining the construction of each with the rest of the sentence.
3. Is the word "but" ever a preposition? Prove your answer. How many prepositions become conjunctions and *vice versâ?*
4. Analyze the sentence beginning "If the assassination" and ending "the life to come."
5. Write out the argument of the First Act, and show particularly how Macbeth is gradually worked up to determine upon committing his great crime.
6. "I dare do all that may become a man;
Who dares do more is none."
Show the force of these words by—
a. The context of the play;
b. A paraphrase, in the shape of a brief practical lesson to a boy of fourteen, who is leaving school for the world.

Section 3.

MILTON.

So promised he: and Uriel to his charge
Returned on that bright beam, whose point now *raised*
Bore him *slope* downward to the sun, now fallen
Beneath the Azores; whether the prime orb,
Incredible how swift, had thither rolled
Diurnal, or this less voluble earth,
By shorter flight to the east, had left him there
Arraying with reflected purple and gold
The clouds that on his western throne attend.
Now came *still* evening on; and twilight gray
Had in her sober livery all things clad;
Silence accompanied; *for beast* and bird,
They to their grassy couch, these to their nests
Were slunk, *all but* the wakeful *nightingale*,
Who all night *long* her amorous descant sung.

1. Paraphrase this passage.
2. Parse the words in *italics*, fully explaining the construction of each with the sentence.
3. Do relative pronouns perform any other office besides that of standing for nouns? Can any other words be called relatives besides relative pronouns? In what cases can a conjunction with a personal or demonstrative pronoun be substituted for a relative pronoun, and in what cases not?
4. Analyze the sentence "and Uriel to his charge" and ending "beneath the Azores."
5. Write out the argument of the Fourth Book.
6. Distinguish accurately between extensions and completions of the predicate.

Section 4.

SHAKESPEARE.

Time thou anticipat'st my dread exploits:
The flighty purpose never is o'ertook,
Unless the deed go with it. *From this* moment
The very firstlings of my heart shall be
The firstlings of my hand. And *even* now,
To crown my thoughts with acts, be *it* thought and done:
The castle of Macduff I will surprise;
Seize upon Fife; give to the edge of the sword
His wife, his babes, and all unfortunate souls,
That trace him in his line. No *boasting like a fool;*
This deed I'll do *before* this purpose cool:
But *no* more *sights*.

1. Paraphrase this passage.
2. Parse the words in *italics*, showing fully the construction of each with the rest of the sentence.
3. What is antithesis? How does it help to make composition forcible? How is it to be marked in reading? Draw a line under every word which is antithetical in the above passage.
4. Analyze the sentence beginning "No boasting like a fool" and ending "no more sights."
5. On what occasion does Macbeth use these words? Trace the changes in Macbeth's character from the beginning to the end of the play.
6. Whence did Shakespeare derive his supernatural machinery? Compare that which he uses in this play and that which he uses elsewhere. What are the characteristics of his use of it?

Section 5.

1. Describe the successive steps in teaching children to parse the verb and its object.
2. A noun may be defined by a reference to its meaning, or by a reference to its office in a sentence. Examine which is the best definition to use in teaching children.
3. Describe the successive steps in teaching children to parse prepositions? When do you consider a preposition fully parsed?

4. Compare the teaching of grammar with that of arithmetic. Why are children able to understand the one at an earlier age than they are able to understand the other?
5. What peculiar advantages belong to grammar and arithmetic as subjects of elementary instruction?

GEOGRAPHY.

(Three Hours allowed for this Paper.)

Section 1.

Draw a map to exhibit

1. The geology of Great Britain;—or, 2. The river system of Europe;—or,
3. The system of islands between the Pacific and Indian Oceans.

Section 2.

1. What peculiar commercial advantages belong to the position of the British possessions in North America?
2. Exhibit, by three outline maps, the political divisions of Europe, in 1683, in 1760, and in 1820.
3. Mention instances of connections that can be traced between the physical features of a country and its history.

Section 3.

1. Give a full account of the commerce of Russia and of the means which she possesses of increasing it.
2. What changes are likely to be produced in the commerce of a country by the increase of population and the progress of discovery? Illustrate your answer by reference to the case of Great Britain.
3. The commerce of a country may either be based on superior natural capabilities, or on some accidental priority, or on artificial encouragement. Classify the commerce of France under these three heads.

Section 4.

1. Explain what is meant by sidereal, solar, mean solar, and equinoctial time.
2. Explain the principle on which dials are constructed, and show how to construct a vertical south dial.
3. Enumerate the means that may be used for finding the longitude, and explain one of them in detail.

Section 5.

Write full notes, and draw proper maps, diagrams, and other illustrations for a lesson to pupil-teachers, in the fourth year, on

1. The commerce and commercial capabilities of British India;—or,
2. The tides;—or, 3. The Peninsular War.

Section 6.

1. What is the right use of a map in teaching geography, and what of the black-board? Is there any advantage in sometimes drawing maps on the floor?
2. In what respects is it better to aim at giving children a detailed knowledge of the geography of their own country, and how far a general knowledge of the geography of many countries?
3. Describe accurately the successive steps in teaching a child to use a map for himself.

HISTORY.

(Three Hours allowed for this Paper.)

Section 1.

1. Describe the successive steps in the trial of a person accused of a felony.
2. What remedy is provided by the British Constitution for illegal action by the Executive? Can you mention any instances in history of that remedy having been applied?
3. What is a court of appeal? What courts of appeal have we in England?

Section 2.

1. What is understood by "the common law" in England?
2. Define the privileges and powers of the House of Lords.
3. What is a corporation? What are its powers, privileges, and disabilities? What are corporations sole, and what has occasioned their creation?

Section 3.

1. Describe the causes and effects of the introduction into England of the Flemish immigrants in early times, and of the French immigrants more recently.
2. Give a short sketch of the improvement of agriculture since the time of Henry VII.
3. Give an account of the commencement and growth of the chief manufactures now carried on in England, and mention any that have died out.

Section 4.

1. Give an account of the successive changes in the weapons of war used by European nations.
2. What beverages have been in use in England between the Conquest and the present time, and when was each introduced?
3. Give as detailed a description as you can of the *several parts* of an ancient baronial castle. Mention some of the principal monuments of this kind in the kingdom; and refer, in the course of your answer, to any of them which you have seen. At what periods in English history were the principal changes in the residences of the nobility introduced, and why? What is the last historical incident connected with most of those which are in ruins?

Section 5.

Write full notes of a lesson to your first class on one of the following passages:—

1. "The government of any country, whether it be a king or a president, or a senate or parliament, or, in short, whatever kind of government it is, must always have *power* to make all the people submit; since, otherwise, it could not perform the office of protecting them. It is not left to each person's choice, therefore, how much he shall pay for his protection, but government fixes the taxes, and enforces the payment of them.

"Many governments have made a bad use of this power, and have forced their subjects to pay much more than the reasonable expenses of protecting and governing the country. In some countries, and in this among others, the people are secured against this kind of ill-usage by

choosing their own governors; that is, the members of Parliament, without whom no laws can be made, or taxes laid on."—*Irish* IV. Book, 228, 229.

2. "The *first* kind of government sprang from that of the father of a family, and is called patriarchal. It existed before the flood, and also prevailed in many parts of Asia long after that event. But mankind were at length divided into separate tribes, and these became involved in wars with each other. In the struggles which ensued, some men displayed superior strength, courage, and skill. These naturally became the leaders, and were entrusted with extensive authority.

"All men are fond of power, and these leaders soon acquired almost complete dominion over the people. This produced the *second* kind of government, the head of which was a chief, and was usually that of warlike tribes, who had advanced from the savage to the barbarous state.

"When society had progressed so far as to build towns and cities, the military chieftain was not exactly suited to the more refined and luxurious tastes of the people.

"A *third* kind of government was therefore formed, which is called monarchical.

"In some countries the people elected their rulers, and made laws for themselves. Thus a *fourth* kind of government was instituted, called republican."—*British and Foreign* IV. Book, p. 26.

3. "'I am lodged in a house that affords me conveniences and comforts which even a king could not command some centuries ago. There are ships crossing the seas in every direction, to bring what is useful to me from all parts of the earth. In China, men are gathering the tea-leaf for me; in America, they are planting cotton for me; in the West India islands, they are preparing my sugar and my coffee; in Italy, they are feeding silk-worms for me; in Saxony, they are shearing the sheep to make me clothing; at home, powerful steam-engines are spinning and weaving for me, and making cutlery for me, and pumping the mines that minerals useful to me may be procured. My patrimony was small, yet I have post-coaches running day and night on all the roads to carry my correspondence; I have roads, and canals, and bridges, to bear the coal for my winter fire; nay, I have protecting fleets and armies around my happy country, to secure my enjoyments and repose. Then I have editors and printers who daily send me an account of what is going on throughout the world among all these people who serve me, and in a corner of my house I have *books*, the miracle of all my possessions, more wonderful than the wishing-cap of the Arabian tales; for they transport me instantly, not only to all places, but to all times.'"—M'Culloch's *Course of Reading*, p. 263, 264.

Section 6.

1. What is the most suitable kind of historical teaching for children under 13? Draw out such a scheme, for this purpose, as you would propose to adopt for your first class.

2. Distinguish between history, chronology, and a series of biographies.

3. In what order should military, social, and political or constitutional history be taught? At what age do you consider children capable of entering into the last of these three? Draw out a plan for the instruction of a pupil-teacher in history, during the fourth and fifth years of his apprenticeship?

SCHOOL-MANAGEMENT.

(Three Hours allowed for this Paper).

Write the first line of your first answer as a specimen of copy-setting in large hand; *and the first line of your second answer as a specimen of copy-setting in* small hand.

Section I.

From the subjoined extract from a class-register calculate—

The average age of the children;—The average attendance for the week;—The number present at all;—And the average number of days attended by each child present at all.

Show the process, and explain the value of the information under each head.

Age.	Names.	Monday.		Tuesday.		Wednesday.		Thursday.		Friday.	
9¼	John Webber	+	+	+		+	+	+		+	+
9½	Charles Farrall	+	+	+	+	+	+	+	+	+	+
10	John Barchett		+		+						
10¼	James Warwick				+	+	+	+	+		+
11	Thomas West			+		+	+	+	+		+
10	William Turrill	+	+	+	+				+	+	
10	James Tagg	+	+	+		+	+		+	+	+
8½	John Thompson			+	+	+		+	+		+
8¾	William Stewart		+		+	+	+		+	+	+
9	John Allenson										
9½	James Varty				+	+	+	+			
10	Richard Clarke				+	+	+	+	+	+	
10	John Andersen	+	+	+	+	+	+	+	+	+	+
9¾	James Short		+	+	+	+	+		+	+	+
10½	Henry Williams			+							
8	Walter Barlow	+	+	+		+					
8½	Thomas Worth										

Section 2.

To what registers, to what part of them, and in what manner, would you refer, in order to make the following return?

Number of Children on the Books aged		Boys.	Girls.	Total.
Under Four				
Between Four and Five				
Between Five and Six				
Between Six and Seven				
Between Seven and Eight				
Between Eight and Nine				
Between Nine and Ten				
Between Ten and Eleven				
Between Eleven and Twelve				
Between Twelve and Thirteen				
Between Thirteen and Fourteen				
Over Fourteen				
Total				
Who have been in the School.	Less than one Year			
	One Year*			
	Two Years*			
	Three Years*			
	Four Years*			
	Five Years and over			
Admitted in last Twelve Months				
Left in last Twelve Months				
Highest Weekly Average in past Year				
Lowest Weekly Average in past Year				
Average attendance for past Year				
Present ordinary attendance				

Section 3.

1. Explain the tripartite method of organizing a school.
2. Draw a plan of such a school-room as you would prefer, and of the arrangement of the desks and other furniture within it, and give your reasons for each particular.
3. Draw up a time-table for a school of 120 children, situated in a seaport town; supposing yourself to have three pupil-teachers. Explain the reasons for your arrangement and the length of time you allow to each subject.

Section 4.

1. What are the advantages and disadvantages of mixed schools (of boys and girls together)? What special regulations would you make in conducting such a school? How would you employ male and female pupil-teachers respectively in such a school?
2. How may evening classes for adults be best combined with an elementary day school, in which the master has pupil-teachers?
3. Explain in detail the importance of having a separate infant school (*a*), as regards the infants (*b*), as regards the other scholars. On what principle should it be determined whether a child ought to be classed in the infant or in the juvenile school? If a separate infant school cannot be had, by what other expedients can some of its advantages be secured?

Section 5.

Write a short theme on the best mode of securing regular attendance.

Section 6.

Give the abstract of a lesson—

1. From the Irish Fourth Book, on Wages; or,
2. From the British and Foreign Fourth Book on the Velocity of Sound; or,
3. From M'Culloch's *Course of Reading* on Capillary Attraction.

LATIN PROSE.

(Three Hours allowed for this Paper.)

Translate literally into English:

"Ut enim alios omittam, nobis rempublicam gubernantibus, nonne togæ arma cessere? Neque enim in republica periculum fuit gravius umquam, nec majus otium. Ita consiliis diligentiaque nostra celeriter de manibus audacissimorum civium delapsa arma ipsa ceciderunt. Quæ res igitur gesta umquam in bello tanta? qui triumphus conferendus? Licet enim mihi, Marce fili, apud te gloriari, ad quem et hereditas hujus gloriæ, et factorum imitatio pertinet. Mihi quidem certe vir abundans bellicis laudibus, Cn. Pompeius, multis audientibus, hoc tribuit, ut diceret, frustra se triumphum tertium deportaturum fuisse, nisi meo in rempublicam beneficio, ubi triumpharet, esset habiturus. Sunt ergo domesticæ fortitudines non inferiores militaribus: in quibus plus etiam quam in his, operæ studiique ponendum est."

Section 1.

1. Parse the words—
   cessere, republica, delapsa, ceciderunt, ponendum.
2. Explain the government and construction of—
   nobis rempublicam gubernantibus, licet enim mihi, inferiores militaribus,
   togæ, multis audientibus, studii.
3. Why is esset habiturus in the subjunctive mood? What is the name given to this construction?
4. Give the reasons for the mood of—
   ut omittam, ut diceret, ubi triumpharet.
5. Analyze, according to the rules of Morell's Analysis, the last sentence, Sunt ergo....ponendum est.
6. Give a list of the words in the above passage from which English words are derived.

Section 2.

Translate into Latin—

We are all partakers [*particeps*] of reason [*ratio*] and of that [*is*] superiority [*præstantia*] by which we excel [*antecello*] the beasts [*bestia*].

Section 3.

1. The English grammars have usually been little more than adaptations of the Latin grammar to the English language. What has been their consequent defect?
2. What difference must be made in the method of learning a language when you wish to make it a study, and when you wish to make immediate use of it? and why?
3. In what respects is English parsing generally more difficult than Latin? Can you suggest any means of overcoming the difficulty?

LATIN POETRY.

(Three Hours allowed for this Paper.)

Translate into literal English prose:

"Portus ab accessu ventorum immotus, et ingens
Ipse; sed horrificis juxta tonat Ætna ruinis,
Interdumque atram prorumpit ad æthera nubem,
Turbine fumantem piceo, et candente favilla;
Attollitque globos flammarum, et sidera lambit:
Interdum scopulos avulsaque viscera montis
Erigit eructans, liquefactaque saxa sub auras
Cum gemitu glomerat, fundoque exæstuat imo.
Fama est, Enceladi semiustum fulmine corpus
Urgeri mole hac, ingentemque insuper Ætnam
Impositam ruptis flammam exspirare caminis;
Et, fessum quoties mutet latus, intremere omnem
Murmure Trinacriam, et cœlum subtexere fumo.
Noctem illam tecti silvis immania monstra
Perferimus; nec, quæ sonitum det causa, videmus.
Nam neque erant astrorum ignes, nec lucidus æthra
Siderea polus, obscuro sed nubila cœlo;
Et lunam in nimbo nox intempesta tenebat."

(*Æneid*, iii, 570–587.)

Section 1.

1. Parse the words—
   ventorum, æthera, viscera, fulmine, fessum,
   prorumpit, attolit, liquefacta ruptis, tenebat.
2. Explain the construction of—
   montis, Ætnam, tecti silvis.
   urgeri mole hac, noctem illam,
3. Analyze according to the rules of Morell's Analysis,
   Noctem illam tecti silvis immania monstra
   Perferimus; nec, quæ sonitum det causa, videmus.
4. Scan the two last lines.
   Why is the last syllable *long* in *siderea*, and short in *nubila* and *intempesta*?
5. Give a list of the words in the above passage from which English words are derived.
6. What are the general rules for the quantity of the final syllables of words ending in a, e, i, o, u?

Section 2.

1. In what respects do we learn more of a language by studying its poetry than by studying its prose?
2. Mention any instances that you can remember of Latin constructions, or mythological allusions, in English poets, and explain them as you would to a pupil-teacher who knew nothing of Latin.
3. Is the syntax or the accidence the fundamental part of grammar? Which do we usually begin with in teaching? Give the reasons for and against this way of beginning?

LOGARITHMIC ARITHMETIC.

Books of Logarithmic Tables are allowed to be used with this paper, provided they contain no introductory treatise on logarithms.

(Three Hours allowed for this Paper.)

Section 1.

1. Define a logarithm, and prove from the definition that extraction of the n^{th} root of a number corresponds to the division of its logarithm by n.

2. How are the logarithms of numbers less than 1 to be found from the tables? Find the logarithm of ·0015.

3. Explain and demonstrate the use of the tables of proportional parts. Find the logarithm of 172387; and the number corresponding to the logarithm 3·1612452.

Section 2.

1. Find the value of $(1{\cdot}05)^{20}$ and of $(16{,}807)^{\frac{1}{5}}$.

2. How much money must be invested at compound interest to produce 5,000*l.* in 16 years, at 4 per cent. per annum.

3. Find the different amounts of 150*l.* at the end of 12 years at 3 per cent. per annum, compound interest, the interest being due monthly, quarterly, half-yearly, and yearly.

Section 3.

1. What must be the rate of compound interest to enable a sum to double itself in 5 years?

2. Find the present value of an annuity of 50*l.*, to commence 30 years hence, and to be paid for 16 years, interest being compound, and reckoned at 3 per cent.

3. In return for a cargo of hardware, valued at 3,900*l.*, a merchant received fruit estimated at 1,700*l.*, wine at 1,800*l.*, and 400*l.* in cash. He sold the fruit afterwards for 1,450*l.*, and the wine for 2,500*l.* Pass these items through the accounts to balancing.

Section 4.

1. In teaching arithmetic, what proportion should be observed between the times devoted to the explanation of a process by the teacher, to the working of examples of that process on the black-board, and to the working of examples by the children without assistance?

2. Work one of the examples set in Section 2, without the use of logarithms, as a model whereby your first class might work similar examples. What kind of problems in compound interest may be worked without logarithms, and what may not?

3. Explain, as if to a pupil-teacher in his fifth year, the notation used to express powers and roots, and show that tables of logarithms are nothing more than adaptations of that notation.

HIGHER MATHEMATICS.

Euclid, Surveying, and Practical Astronomy.

(Three Hours allowed for this Paper.)

Section 1.

1. In a right-angled triangle if a perpendicular be drawn from the right angle to the base, the triangles on each side of it are similar to the whole triangle and to one another.

2. Similar triangles are to one another in the duplicate ratio of their homologous sides.

3. The rectangle contained by the diagonals of a quadrilateral inscribed in a circle is equal to both the rectangles contained by its opposite sides.

Section 2.

1. Describe a rhombus, of which one diagonal shall be double the other.

2. In a given triangle place a straight line equal and parallel to a given straight line.

3. If two circles intersect, the common chord produced bisects the common tangent.

Section 3.

1. Describe the process of surveying without the theodolite, and the instruments that would be needed.

2. Describe the construction and use of the Vernier.

3. Draw the plan, and calculate the area of a field from the following field book:—

From	230 to C A	
0	150 to A	0
	80	10
From	D on L	
0	135 to D	0
	70	12
	45	12
From	C on L	
0	140 to C	0
	110	15
	60	0
From	B on L	
0	220 to B	0
	200	10
From	A go'	East

Section 4.

1. Define altitude, azimuth, zenith, horizon, declination, radius vector, perigee, apogee, conjunction, opposition.

2. Show how the latitude of a place on the earth's surface can be found.

3. Mention and explain the five astronomical corrections necessary to deduce from the observed or registered place of a heavenly body its true one.

Section 5.

1. Show how to prove experimentally to children that similar figures are to one another in the duplicate ratio of their homologous sides; and express the proposition itself in fit terms for such a purpose. Illustrate the proposition, when proved, by familiar examples.

2. Explain how you would show a boy of 13 to ascertain roughly the distance of an inaccessible object, such as a tree on the other side of a river, by observations made to scale on a piece of paper, without any but common drawing instruments.
3. Write full notes, and draw proper diagrams, for a lesson to the first class of an elementary school situated in a seaport town, on the finding of the longitude by lunar observations.

Section 6.

1. What is the essential difference between the experimental and mathematical proof of a geometrical proposition? Illustrate your answer by a comparison of the two methods of proving the Fourth Proposition of the First Book.
2. Why is geometry more difficult to children than arithmetic? At what age is it usually possible to begin teaching geometry mathematically?

HIGHER MATHEMATICS.

Algebra and Trigonometry.

(Three Hours allowed for this Paper.)

Section 1.

1. If any two quantities partly rational and partly quadratic surds, be equal to one another, the rational parts of the two are equal, and also the irrational parts.
2. Prove the formulæ for finding the sums of arithmetical and geometrical progressions.
3. A farmer bought a lot of oxen, sheep, and horses for 127*l.*; each horse cost 15*l.*, each ox 10*l.*, and each sheep 30*s*, and the number of sheep was equal to twice that of the horses and oxen together. How many did he buy of each?

Section 2.

1. Show how to find the greatest term in the expansion of $(a+x)^n$.
2. If two numbers are prime to each other they are the least in that proportion.
3. Resolve into partial fractions $\frac{1-x+x^2}{(1+x)x^2}$; $\frac{14x^3+6x^2-32x-12}{(x^2-1)(x^2-4)}$; $\frac{1}{x^3-1}$.

Section 3.

1. The product of any r consecutive numbers is divisible by $1 \cdot 2 \cdot 3 \ldots r$.
2. Express $\sqrt{7}$ and $\sqrt{18}$ in continued fractions.
3. Reduce to a vulgar fraction in the senary scale, without passing into the decimal scale, the following recurring senary fraction ·434343 *ad inf.*; and then express the vulgar fraction so obtained in the decimal scale.

Section 4.

1. Prove that $\sin(A+B) = \sin A \cos B + \sin B \cos A$.
2. Prove that $\operatorname{cosec} 2A + \cot 4A = \cot A - \operatorname{cosec} 4A$, and find A when $\operatorname{Tan} A + 3 \cot A = 4$.
3. If two circles touch externally, the diameter of one of which is four times that of the other, the sine of the angle between their common external tangents is $\frac{24}{25}$.

Section 5.

1. Write out the algebraical proof of the arithmetical rule for finding the square root, and find by first principles, without algebraical symbols, the square root of 14641.
2. Prove, as you would to a pupil-teacher in the fifth year, by algebra and geometry, without the use of trigonometry, the rule for finding the area of a triangle when the three sides are given.
3. Point out exactly how far algebra corresponds to arithmetic, and at what point, not merely a peculiar notation, but new principles or conceptions are introduced.

Section 6.

1. Describe exactly the successive steps in the process of teaching algebraical multiplication to a pupil-teacher in his fifth year.
2. Explain the means that you would adopt to give your first class a clear idea how distances can be measured by trigonometry.
3. Compare the effect of teaching boys of seventeen algebra, &c., and teaching them geometry.

PHYSICAL SCIENCE.

(Three Hours allowed for this Paper.)

Section 1.

1. Describe the construction and explain the action of
1. The air pump;—or, 2. The differential thermometer;—or, 3. The galvanic battery.

Section 2.

1. Describe the parallel motion, and demonstrate its principle mathematically; or show by diagrams how it could be demonstrated experimentally. What different forms may it assume?
2. Write the chemical symbols of laughing gas, firedamp, rock-crystal, sulphuretted hydrogen, carbonic acid, common salt.
3. Explain the construction and use of a sextant.

Section 3.

1. Describe the hygrometer, and explain its action.
2. Explain the meaning of HgS, NO_5, Fe_2O_3, $SbCl_3$, Au_5Cl_3, C_5H_4.
3. Describe experiments to illustrate the chemical properties of chlorine, hydrogen, and iodine.

Section 4.

1. Describe and explain the action of the common syphon, the Wurtemburg syphon, and the syphon fountain.
2. Explain the uses, and draw diagrams to show the form of a retort, a pipette, a pneumatic trough, a gas-holder, and an eudiometer.

3. Describe the most common modes of preparing phosphorus, phosphorous acid, and phosphuretted hydrogen, giving the proper chemical equations in each case.

Section 5.

Write full notes, and draw proper diagrams, to show how you would treat one of the following passages, supposed to be read by your first class.

1. Single microscopes, of the greatest power, are very small globules of glass, which are made by melting the ends of fine threads of glass in the flame of a candle; or by taking a little fine powdered glass on the point of a very small needle, and melting it into a globule. With such microscopes as these, Lewenhoek made all his wonderful discoveries. The most wonderful single microscopes are those lately made of diamond. The *compound microscope* consists of at least two lenses, by one of which an image is formed, and this image is viewed through the other lens, called the eye-glass, instead of the object itself, as in the single microscope."—*Irish IV. Book*, p. 292.

2. The barometer is a very useful instrument, and is constructed with reference to the weight and pressure of the atmosphere. It indicates the state of the weather, and is used to measure great altitudes, such as those of high mountains, balloons, &c.

"The barometer consists of a glass tube about three feet in length, open only at one end. This tube in the construction of the instrument is first filled with mercury, the open end is then stopped with the finger, and the whole is immersed in a cup which contains a little mercury. Part of the mercury which was in the tube now falls down into the cup, leaving a vacant space in the upper part of the tube to which the air cannot gain access. This space is therefore a partial vacuum, and the mercury in the tube being thus relieved from the pressure of the atmosphere, whilst that in the cup remains exposed to it, the pressure of the air in the cup supports the mercury in the tube, and prevents it from falling. Thus the equilibrium of the mercury is destroyed only to preserve the general equilibrium of fluids.—*British and Foreign IV. Book*, p. 90.

3. "Compound bodies are innumerable; but none are more important than the two I shall now describe to you,—*air* and *water*.

"The term atmosphere is applied to that mass of gaseous matter which everywhere surrounds the earth, which is preserved at the surface of the earth by the force of gravity, and which revolves together with it around the sun. Air was one of the four elements of the ancients; but modern chemistry has demonstrated it to be a compound body. There is now no doubt that it is composed of oxygen and nitrogen, and that 100 measures of pure atmospheric air consist of twenty volumes of oxygen and eighty of nitrogen. This, however, it must be recollected, is the constitution of pure atmospheric air. The atmosphere itself is never absolutely pure; it always contains a certain variable quantity of carbonic acid and watery vapour, besides the odoriferous matter of flowers and other volatile substances."—*M'Culloch's Course of Reading*, pp. 186, 187.

Section 6.

1. What is the essential difference between an object lesson and a lesson on elementary science, supposing the object in each case to be the same, as, for instance, the lever.

2. What kind of experiments are best suited to teach the rudiments of science to boys between 12 and 14, and what kind may be used to teach boys between 17 and 19? Give instances to show your precise meaning.

3. What is the chief difficulty in the way of using physical science as a means of cultivating the minds of children? How may that difficulty be, to some extent, overcome?

MALE STUDENTS.—Third Year.

THE HOLY SCRIPTURES.

Every candidate is required to answer at least two questions in the Second Section.

(Three hours allowed for this Paper.)

Section 1.

1. Compare Gideon and Jephtha. Is either of them ever alluded to in Books of the Bible later than the Book of Judges?

2. What indications are there before the time of Saul of a growing inclination on the part of the Israelites to set up a monarchy? How far is Samuel responsible for having caused their final determination?

3. Sketch the character and the reign of Saul, and give a particular account of the circumstances attending his appointment.

4. What different forms of idolatry successively seduced the Israelites? Distinguish between those which were breaches of the first, and those which were breaches of the Second Commandment.

5. Enumerate and describe the different kinds of sacrifice ordained among the Jews, and explain the significance of each.

6. Give an account of David's army, and how it was gradually formed.

7. What is the subject of the prophecy of Joel? Can you mention any phrase or phrases which he seems to have introduced into prophetical language?

8. Give an analysis of one of the Gospels.

9. What miracles worked by our Lord appear to have a distinctly symbolical meaning? Explain that meaning in any one instance.

10. Explain our Lord's three last Parables.

11. Collect together the various occasions on which our Lord disregarded the Pharisaical traditions on the observance of the Sabbath, and was assailed by the Pharisees in consequence.

12. Arrange St. Paul's epistles in their chronological order. Can you group them together under any general heads?

13. To which Epistle of St. Paul would you refer as containing, in the most striking form, his teaching on the divinity of our Lord? Give the substance of that teaching.

14. Narrate what is told us in the Bible of St. Peter, and add if you can any traditions of his late years.

Section 2.

1. Arrange the Sermon on the Mount and the Parables into a system for the doctrinal instruction of your first class.
2. What difference would you make in the religious instruction of children under 7 and above 11?
3. Explain and illustrate, as you would to your first class, the three Parables in the 15th chapter of St. Luke on Repentance.
4. In what respects should a lesson from the Bible differ from any ordinary lesson?

EVIDENCES OF CHRISTIANITY.

(Three Hours allowed for this Paper.)

Section 1.

1. Distinguish between *contrary to general* and *contrary to particular* experience. How does Paley apply this distinction, to answer Hume?
2. What evidence can be found in the New Testament to prove that the preaching the Gospel was attended with danger? What is the strict value of this evidence?
3. What is the evidence, and what the value of the evidence, that the danger of preaching the Gospel was foreseen by those who preached it?
4. What arguments for the truth of the Gospel does Paley derive from our Lord's prediction of the destruction of Jerusalem, and how does he answer the objection that that prediction may have been a forgery after the event?
5. Paley always argues on the supposition that if the books of the New Testament are not genuine and authentic, they are intentional forgeries. Is any third supposition possible, and, if so, how must it be dealt with?
6. "When it is once settled, no matter upon what principle, that to do good is virtue, the rest is calculation?" Where does Paley say this? What does he mean by "to do good." How far is Paley supported, in this view, by the common feelings of religious people?
7. "No two things can be more different than the heroic and the Christian character." Comment upon this statement of Paley's, and illustrate your comments by historical examples. Is it possible to maintain the argument which Paley founds on this statement, and yet to give up the statement itself?
8. Examine the third of the three cases in which Paley concedes that a history, and a series of letters, referring to the same events, are no confirmation of each other.
9. Describe the marks by which a coincidence between two writings may be recognised as undesigned, and give instances.
10. What forgeries does Paley compare with the genuine epistles of St. Paul? and what is the result of the comparison? Can you mention any other spurious or untrustworthy documents, professing to belong to the time of the Apostles?

Section 2.

1. What kind of doubts sometimes occur to the minds of children? Can they be met by such arguments as Paley's Evidences.
2. In what cases is it expedient to solve children's doubts, and in what cases is it better to trust to time?
3. In what respects is a teacher better able to give religious instruction to children, in consequence of a careful study of the evidences for religion?

SCHOOL-MANAGEMENT.

(Three Hours allowed for this Paper.)

On illustration, as an element in teaching:—

Show its necessity, and point out what kinds of illustration are best suited to each of the usual subjects of elementary instruction.

HISTORY.

Hallam's Middle Ages.

(Three Hours allowed for this Paper.)

Section 1.

1. To what causes may we assign the success of Edward III. in his war with France? Compare that war, in respect to causes, character, and consequences, with that of Henry V.
2. Give a brief sketch of the feudal system, and examine how far it was favourable to the growth of liberty.
3. When was the change effected from the feudal to the modern military system? What were the causes and what the consequences of that change?
4. Give an account of the commerce of Italy during the Middle Ages.
5. What germs of political liberty are to be found in the laws and customs of other countries besides England? and how were they lost?
6. Give an account of Innocent III.
7. What was the Saxon Law of Frank pledge?
8. Describe the Common law, and the manner of its establishment.
9. What three constitutional principles may be considered as established by Parliament in the reign of Edward III? And how?
10. Give an account of the gradual extinction of villenage.
11. To what causes does Hallam attribute the intellectual improvement of Europe towards the end of the Middle Ages?

Section 2.

Draw up a scheme for a course of historical lessons to the two upper classes of a large elementary school, supposing the children to begin the subject at the average age of ten, and to quit the school at the average age of thirteen.

HISTORY.

MACAULAY AND MAHON.

(Three Hours allowed for this Paper.)

Section 1.

1. Give an account of the growth, character, and fall of the Star Chamber and High Commission Courts.
2. What were the circumstances that led to the Triple Alliance? What was the nature and effect of that Alliance?
3. Give an account of Monmouth's Rebellion against James II., and the circumstances which attended its suppression.
4. Describe the abdication of James II.
5. Describe the origin of the National Debt and the establishment of the Bank of England.
6. Describe the reformation of the currency in the reign of William III., and the difficulties attending it.
7. Give an account of the Rebellions of 1715 and 1745. Compare the chances of success in each case.
8. Give an account of the South Sea Scheme, and its failure.
9. Describe the rise of the Methodists.
10. At what period in our history did government by a Cabinet begin? Mention the most important Prime Ministers that have since held office.

Section 2.

What do you consider to be the chief purposes of teaching history to children?

HISTORY.

BLACKSTONE.

(Three Hours allowed for this Paper.)

Section 1.

1. Define municipal law and explain the definition, in detail. What mischiefs are likely to arise if municipal law be confounded with moral?
2. What are the three estates of the realm? Give reasons for the power assigned to each, in the British Constitution.
3. What is the peculiar business of the House of Commons, besides that which it has in common with the House of Lords?
4. Describe the passage of a bill through Parliament. Explain particularly the difference between the debate on the reading of a bill and the debate on the same bill in Committee.
5. Enumerate the means provided by the British Constitution to protect the liberty of the subject, and sketch the history of their gradual growth.
6. Describe the ancient and modern English tenures of land. How and when was the change from one to the other effected?
7. Describe the English judicial system. When did it first assume its present form and when did it become independent of the executive?
8. What is meant by a Corporation? Trace the origin and growth of municipal corporations during the feudal period.

Section 2.

Mention instances in which a teacher will be able to apply his own knowledge of the character of our Constitution to the instruction of children in an elementary school, and write full notes of a lesson on one of these instances.

MENTAL SCIENCE.

LOGIC.

(Three Hours allowed for this Paper.)

Section 1.

1. What is the proper business of Logic? Against what kind of error will it guard us, and against what is it powerless?
2. Distinguish between extension and comprehension? Which is, generally speaking, the more comprehensive term, the subject or predicate? Give instances.
3. By what other name is Division known? What is its use? Draw up, side by side, a table of the requisites of division and definition, such as to show that the one is related to the extension of terms precisely as the other is related to their comprehension.
4. What is the cause of the difficulty of definition? Do perfect definitions generally precede or succeed scientific study? Give instances.
5. What is meant by the subalternation, and what by the opposition of propositions?
6. Give a table of the syllogistic figures. What is the most common use of each figure?
7. Explain the fallacy of division and composition, and give instances of it.
8. What is the dilemma? Give any pointed instances that may occur to you. Dilemmas are said to be often fallacious. Where will the fallacy generally be found?
9. It is not usual in reasoning to express both premises. Is the more certain or the more doubtful premise usually omitted? Give instances to prove what you say.
10. Under what head of fallacies would you class the evidence usually adduced to establish vulgar superstitions?
11. What is meant by an analogy? How is it distinguished from an illustration? And how from an example? Give instances of all three.
12. Are precisely the same logical processes applicable in the same degree to the study of Geometry, Physical Science, and Natural History?

Section 2.

1. Is the study of logic the only or the best means of cultivating the reasoning faculty? How do you cultivate that faculty in children?
2. It is said that mathematicians generally reason well from given premises, but frequently neglect to examine the premises themselves. To what kind of study would logic point as the proper corrective?
3. In what respects will the study of logic assist a teacher in giving elementary instruction to children?

Section 3.

Supplemental.—First Part of Mill's Political Economy.

1. Arrange, in a system, the different kinds of labour; and explain why some are more highly remunerated than others.
2. Distinguish unproductive labour and labour for the supply of unproductive consumption.
3. Define capital: explain its source and its use.
4. For what are wages, profits, interest, and rent the proper payments respectively? and what regulates the amount of each.
5. Write out lesson for your first class on the combination of labour.

MENTAL SCIENCE.

MORAL SYSTEMS.—HISTORY OF THE PROGRESS OF ETHICAL PHILOSOPHY, BY MACKINTOSH.

Section 1.

1. Distinguish between the controversy on the origin and that on the nature of Moral Sentiments. In what instances have these questions been confounded?
2. What is meant by the Criterion of Morality? Point out Paley's error in arguing from what he considered the criterion of morality to the nature of obligation.
3. Describe the change introduced into ethical discussion by Butler.
4. Describe the Association Theory of Morals. Is its great advocate, Hartley, to be considered as belonging to the selfish or the disinterested school?
5. Is it possible that considerations of the beneficial consequences of virtuous actions may damp, instead of stimulating the desire to do them? Give reasons for your answer.
6. What may be said in favour of considering Conscience an innate, and what in favour of considering it an acquired faculty? Classify the leading English writers on morals, according to the view held by each on this question. Does the authority of conscience in any way depend upon the answer?

Section 2.

1. Is it ever justifiable in a teacher to be angry with a child? If so, what considerations must control that anger, and what mischief will follow if those considerations be neglected?
2. Examine the arguments for and against corporeal punishment in the education of children, especially considering its effect on the conscience of the children so punished.
3. In what cases does a teacher act wisely in appealing to the principle of self-love as a motive to influence the conduct of children? And in what cases, if in any, would this be a mistake, and why?
4. How ought a teacher to regard and treat the particular dispositions of individual children? Apply what you say specially to the case of a self-reliant, strong-willed boy, who showed a tendency to obstinate disobedience.
5. How would you propose to cultivate in children a love of neatness, order, cleanliness, and punctuality?
6. What is meant by secondary affections and desires? Can the formation of them be aided by education? What considerations may you deduce from thence on school discipline?

MENTAL SCIENCE.

MENTAL FACULTIES AND MORAL PHILOSOPHY.

(Three Hours allowed for this Paper.)

Section 1.

1. What name do we give to the faculty by which we perceive what passes within ourselves? Is this faculty of the nature of a sense, or is it a part of the understanding? What studies keep it in exercise?
2. Distinguish between the primary and secondary qualities of objects. Which of our bodily senses perceive the one, and which the other?
3. What appears to be the ground for the division of our bodily senses into five? Arrange these five in a table, with their proper objects of perception opposite.
4. What is the perfection of memory? With what other powers is that of memory connected?
5. What do you mean by common sense? To what objections is the term liable.
6. Under what few heads does Butler sum up our moral nature? How does he establish the supremacy of conscience?
7. What are the chief arguments against the theory that duty consists in having a regard to our eternal interest? On what other foundation can the obligation of duty be placed?
8. What is meant by a duty to ourselves? Does the same sentiment of disapprobation attach to a breach of this duty as to a breach of any other?
9. Distinguish between appetites, desires, and affections. Is self-love to be classed under any of these? Is conscience?
10. Define precisely the terms dexterity, skill, tact, taste, and judgment.

Section 2.

1. Describe the best method of cultivating the different qualities of a good memory.
2. Describe the natural tendency to imitation. How can a teacher best avail himself of it?
3. In what way can a taste for order, neatness, and cleanliness be produced?
4. Which of the faculties may be most safely trusted to their spontaneous growth for development, and which most require cultivation. Give reasons for your answer.

GREEK GRAMMAR AND EXERCISES.

(Three Hours allowed for this Paper.)

Section 1.

Translate into Greek:

a The arrows pierced through the shields.
ὁ τόξευμα χωρέω διὰ ὁ ἀσπίς.

b It is not right that Menelaus should prosper, and that thy father, and thou, and thy sister should die.
οὐ δεῖ Μενέλεως μὲν εὐτυχέω δὲ ὁ σὸς πατὴρ καὶ σὺ καὶ ἀδελφὴ θνήσκω.

c The wise say that communion, and friendship, and order, and temperance, and justice hold together heaven and earth.
ὁ σοφὸς φημί ὁ κοινωνία καὶ φιλία καὶ κοσμιότης καὶ σωφροσύνη καὶ δικαιοσύνη συνέχω οὐρανὸς καὶ γῆ.

d I am he whom thou seekest.
εἰμὶ αὐτὸς ὃς ζητέω.

e Many of the beasts perished with hunger.
πολὺς ὁ ὑποζύγιον απόλλυμι ὑπὸ λιμός.

Section 2.

1. Write out, in a tabular form, the terminations of all the Greek declensions.
2. Write out, in a tabular form, the terminations of all the persons in every tense, through all moods of the active voice, in a regular Greek verb.
3. Or of the verb *τίθημι*.

Section 3.

Distinguish accurately between that part of grammar which is the same in all languages and that which is different in different languages. Show how the distinction bears upon the teaching of grammar.

GREEK PROSE.

(Three Hours allowed for this Paper.)

Section 1.

Translate literally into English—

"Κῦρος δ' ὁρῶν τοὺς Ἕλληνας νικῶντας τὸ καθ' αὑτοὺς καὶ διώκοντας, ἡδόμενος καὶ προσκυνούμενος ἤδη ὡς βασιλεὺς ὑπὸ τῶν ἀμφ' αὐτόν, οὐδ' ἐξήχθη διώκειν, ἀλλὰ συνεσπειραμένην ἔχων τὴν τῶν σὺν ἑαυτῷ ἑξακοσίων ἱππέων τάξιν ἐπεμελεῖτο ὅ,τι ποιήσει βασιλεύς, καὶ γὰρ ἤδει αὐτὸν ὅ,τι μέσον ἔχοι τοῦ Περσικοῦ στρατεύματος.

"Καὶ πάντες δ' οἱ τῶν βαρβάρων ἄρχοντες μέσον ἔχοντες τὸ αὐτῶν ἡγοῦνται, νομίζοντες οὕτω καὶ ἐν ἀσφαλεστάτῳ εἶναι, ἢν ἥ ἡ ἰσχὺς αὐτῶν ἑκατέρωθεν, καὶ εἴ τι παραγγεῖλαι χρήσοιεν, ἡμίσει ἂν χρόνῳ αἰσθάνεσθαι τὸ στράτευμα.

"Καὶ βασιλεὺς δὴ τότε μέσον ἔχων τῆς αὐτοῦ στρατιᾶς ὅμως ἔξω ἐγένετο τοῦ Κύρου εὐωνύμου κέρατος, ἐπεὶ δὲ οὐδεὶς αὐτῷ ἐμάχετο ἐκ τοῦ ἀντίου οὐδὲ τοῖς αὐτοῦ τεταγμένοις ἔμπροσθεν, ἐπέκαμπτεν ὡς εἰς κύκλωσιν."—*Xenophon's Anabasis I.* chap. viii.

Section 2.

1. Parse the words (accidence and syntax)—

νικῶντας	ἤδει	ἐπεμελεῖτο	αἰσθάνεσθαι
ἡδόμενος	παραγγεῖλαι	ποιήσει	ἐγένετο
ἐξήχθη	τεταγμένοις	ἡγοῦνται	ἐμάχετο
συνεσπειραμένην	προσκυνοῦμενος	νομίζοντες	ἐπέκαμπτεν
ὅ,τι	ἔχων	παραγγεῖλαι	

2. What is the difference between—
ἤν and εἰ ὅ,τι and ὁτι οὐδὲ and οὔτε?
ὡς and ὡς ἥ and ἡ

3. Decline in full—
βασιλεὺς τάξιν στράτευμα χρόνῳ στρατιᾶς

4. What is the difference in meaning and use between the optative and subjunctive moods? Illustrate your answer, from an instance in the above passage.

Section 3.

Translate literally into English—

"Καὶ γὰρ ἔργῳ ἐπεδείκνυτο καὶ ἔλεγεν ὅτι οὐκ ἄν ποτε προοῖτο ἐπεὶ ἄπαξ φίλος αὐτοῖς ἐγένετο, οὐδ' εἰ ἔτι μὲν μείους γένοιντο ἔτι δὲ κάκιον πράξειαν.

Section 4.

1. Parse the words (accidence and syntax)—

ἐπεδείκνυτο	ἐγένετο	κακίον
προοῖτο	μείους	πράξειαν

2. Give the rules for the formation of comparatives and superlatives.
3. Give the rules for the construction of ἄν. Why is it joined with προοῖτο in the above passage, and not with γένοιντο?
4. Explain the exact meaning of κάκιον πράξειαν, and give analogies in English.

Section 5.

What advantages does a teacher derive from the knowledge of a language which he will never be required to teach?

GREEK POETRY.

(Three Hours allowed for this Paper.)

Section 1.

Translate into English—

" ἄλλος δέ τις μάταιος, ἀνομίᾳ θρασύς,
ἐγέλασεν εὐχαῖς, ναυτίλους δ' ἐφθαρμένους
θάσσειν φάραγγ' ἔφασκε τοῦ νόμου φόβῳ,
κλύοντας ὡς θύοιμεν ἐνθάδε ξένους.
ἔδοξε δ' ἡμῶν εὖ λέγειν τοῖς πλείοσι,
θηρᾶν τε τῇ θεῷ σφάγια τἀπιχώρια.
κἀν τῷδε πέτραν ἄτερος λιπὼν ξένων
ἔστη, κάρα τε διετίναξ' ἄγαν κάτω
κἀπεστέναξεν, ὠλένας τρέμων ἄκρας,
μανίαις ἀλαίνων, καὶ βοᾶ κυναγὸς ὥς,
Πυλάδη, δέδορκας τήνδε; τήνδε δ' οὐχ ὁρᾷς
Ἄιδου δράκαιναν, ὥς με βούλεται κτανεῖν
δειναῖς ἐχίδναις εἰς ἔμ' ἐστομωμένη;
ἡ δ' ἐκ χιτώνων πῦρ πνέουσα καὶ φόνον,
πτεροῖς ἐρέσσει, μητέρ' ἀγκάλαις ἐμὴν
ἔχουσα, πέτρινον ὄχθον, ὡς ἐπεμβάλῃ.
οἴμοι· κτενεῖ με. ποῖ φύγω; παρῆν δ' ὁρᾶν
οὐ ταὐτὰ μορφῆς σχήματ', ἀλλ' ἠλλάσσετο
φθογγάς τε μόσχων καὶ κυνῶν ὑλάγματα
ἃ φάσ' Ἐριννὺς ἴέναι μιμήματα."

Iphig. in Tau., 275–294.

Section 2.

1. Parse the words (accidence and syntax)—

ἐγέλασεν	λιπὼν	κλυόντας	πνέουσα
ἐφθαρμένους	δέδορκας	ἔστη	παρῆν
φάραγγα	χιτώνων	διετίναξε	ἠλλάσσετο
ἔδοξε	ἐπεμβάλῃ	βούλεται	
πλείοσι	ἴέναι	κτανεῖν	

2. Decline in full—

τις	σφάγια	πῦρ
θρασὺς	τήνδε	μητέρα

3. Scan the first two lines, name the metre, and give its rules.
4. Who is the speaker of the above passage, and what is the substance of his whole speech?

Section 3.

Translate literally into English—

"ὄρνις, ἃ παρὰ τὰς πετρίνας
πόντου δειράδας, ἀλκυών,
ἔλεγον οἷτον ἀείδεις,
εὐξύνετον ξυνετοῖσι βοάν,
ὅτι πόσιν κελαδεῖς ἀεὶ μολπαῖς,
ἐγώ σοι παραβάλλομαι
θρήνους, ἄπτερος ὄρνις,
ποθοῦσ' Ἑλλάνων ἀγόρους,
ποθοῦσ' Ἄρτεμιν λοχείαν,
ἃ παρὰ Κύνθιον ὄχθον οἰκεῖ
φοίνικά θ' ἁβροκόμαν,
δάφναν τ' εὐεργέα, καὶ
γλαυκᾶς θαλλὸν ἱερὸν ἐλαί-
ας, Λατοῦς ὠδῖνα φίλαν,
λίμναν θ' εἰλίσσουσαν ὕδωρ
κύκνειον, ἔνθα κύκνος μελῳ-
δὸς Μούσας θεραπεύει.
ὦ πολλαὶ δακρύων λιβάδες,
αἳ παρηίδας εἰς ἐμὰς
ἔπεσον, ἀνίκα πύργων
ὀλλυμένων ἐνὶ ναυσὶν ἔβαν
πολεμίων ἑρετμοῖσι καὶ λόγχαις."

Iphig. in Tau., 1089–1110.

Section 4.

1. Parse the words (accidence and syntax)—

δειράδας	φοίνικα	ἀείδεις	ἔπεσον
θρήνους	ὠδῖνα	κελαδεῖς	ὀλλυμένων
ποθοῦσα	λιβάδες	παραβάλλομαι	ἔβαν

2. Decline in full—

ὄρνις	πόσιν	ὕδωρ	ναυσίν
βοάν	Λατοῦς	παρηίδας	

3. In what dialect is this passage written, and what are the peculiar characteristics of this dialect?
4. What is the proper office of the chorus in a Greek drama? How far does it interfere with the dramatic effect? Is there anything similar in English dramatic poetry?
5. What is the difference between epic and dramatic poetry? Make a list of the chief epic and chief dramatic poets of Greece, Italy, and England, specifying the principal works of each.

Section 5.

1. Give a list of English words of Greek etymology, with their meanings.
2. What is the best substitute to be employed by those who have not time to learn any other language than their own, in order to obtain some of the advantages which are given by a study of a classical language?

HIGHER MATHEMATICS.

Bookwork.

(Three Hours allowed for this Paper.)

Section 1.

1. The sines of the sides of a spherical triangle are as the sines of the angles to which they are respectively opposite.
2. In an oblique-angled spherical triangle, if two sides and the included angle are given, show how the remaining sides and angles are to be found.
3. Explain aberration, and show how the angular correction due on that account may be found.
4. Describe accurately the mode of observation with the mural circle.
5. Prove that the difference of longitude is to the departure as the radius is to the cosine of the middle latitude.
6. Prove the principle of virtual velocities in the case of a single particle acted on by any system of forces in the same plane.
7. The path of a projectile in vacuo is a parabola.
8. Two imperfectly elastic balls moving in the same direction, but with different velocities, impinge on one another; find the velocities after impact.
9. Diverging rays are incident on a concave spherical reflector; find the geometrical focus.
10. Define the focal length of a lens; determine it mathematically, and show how it may be determined experimentally.
11. Define a differential coefficient, and prove the rule for differentiating a fraction.
12. State and prove McLaurin's theorem.
13. Prove that if a function be a maximum, its first differential coefficient will vanish.
14. Prove that in any curve $\frac{dy}{dx}$ = tangent of angle between tangent and axis of x.

Section 2.

Show how a teacher's knowledge of higher mathematics may assist him in the preparation of problems for teaching lower subjects, such as Euclid. Give instances.

HIGHER MATHEMATICS.

Problems in pure Mathematics.

(Three Hours allowed for this Pader.)

Section 1.

1. Describe a circle which shall pass through two given points and touch a given straight line.
2. Find a point within an isosceles triangle whose distance from either angle at the base is double of its distance from the vertex.
3. Show that in a right angled spherical triangle, of which c is the right angle,
$$\sin 2b \cos 2a = \sin (c + a) \sin (c - a).$$
4. If one angle of a spherical triangle be equal to the sum of the other two angles the greatest side is double of the distance of its middle point from the opposite angle.
5. Differentiate $a = \sin^{-1} \frac{1 - x^2}{1 + x^2}$.
$$a = \varepsilon^{\sin x}.$$
6. Find the value of $u = \frac{b - (b^2 + x^2)^{\frac{1}{2}}}{x^2}$ when $x = o$.
$$u = \frac{x - (n+1)x^{n+1} + n \cdot x^{n+2}}{(1-x)^2} \text{ when } x = 1.$$
7. Find the minimum value of $\frac{x^2 - x + 1}{x^2 + x - 1}$ and of $(1+x)^{\frac{2}{3}} \cdot (7 - x)^{\frac{1}{3}}$.
8. Describe the largest rectangle in a given segment of a circle.
9. Trace the curve $ay = x^2$.
10. Integrate $\frac{du}{dx} = \frac{\varepsilon^x \cdot x}{1 + x^2}$.
11. Find the area of a parabola whose equation is $y^2 = 4ax$.
12. Find the length of the hypocycloid whose equation is $x^{\frac{2}{3}} + y^{\frac{2}{3}} = a^{\frac{2}{3}}$.

Section 2.

What danger is there that an elementary teacher, in pursuing the study of abstract mathematics, may be unfitted for, instead of assisted in his proper work? and how is he to guard against this danger?

HIGHER MATHEMATICS.

Problems in Applied Mathematics.

(Three Hours allowed for this Paper.)

Logarithmic Tables may be used with this Paper.

Section 1.

1. Find the centre of gravity of a solid cone and a solid cylinder on opposite sides of the same circular base, the height of the cone being half that of the cylinder.
2. A sphere weighing 20 pounds rests upon two inclined planes, whose inclinations to the horizon are 60° and 30° respectively. Find the pressure on each plane.
3. A weight of 15 tons is supported by a power acting on a system of 6 pulleys, every string being attached to the weight, and the friction of every pulley being $\frac{1}{7}$ of the pressure on that pulley. Find the power.
4. With what velocity must a ball strike another equal ball that is moving 5 feet in a second, so that the impinging ball may be reduced to rest, the common elasticity of the balls being $\frac{1}{3}$?

5. A body is projected at an angle of 45° with a velocity of 805 feet per second. Find the range.
6. If the length of a pendulum beating seconds be $39\frac{1}{8}$ inches, what will be the length of a pendulum beating minutes?
7. The specific gravity of two substances being 9 and 12, find the specific gravity of a substance compound of them in equal proportions of both, and find the greatest thickness that may be given to the sides of a cubical box, made of the compound, so that it may be just able to float in water, the outside of the box being a cube foot.
8. An arrow 2 feet long is placed vertically, at a distance of 6 feet, before a spherical mirror, also placed vertically, whose radius is 3 feet. Where will the image be, and will it be magnified or diminished, erect or inverted?
9. An object is seen through two lenses, one convex and the other concave, placed at a distance equal to the difference of their focal lengths. In what cases will it be erect, in what inverted, in what magnified, and in what diminished?
10. In latitude 52° 5′ N., the true meridian altitudes of three fixed stars were 58° 6′ 12″ N., 31° 50′ 12″ N., and 64° 7′ N., find their declinations.
11. Given the ratio of the earth's equatorial and polar diameters $= \frac{3963}{3950}$. Find approximately the latitude taken from the centre of the earth of a place whose observed latitude is 45°.
12. Required the course and distance from lat. 10° 15′ N., long. 15° 6′ W., to lat. 8° 15′ S., long. 36° 5′ W.

Section 2.

Sketch out a syllabus, and give a list of the illustrations for a course of lessons on Mechanics, in which no apparatus is to be used but such as could be made by yourself, or found in any ordinary household.

EXPERIMENTAL SCIENCE.

Inorganic Chemistry.

(Three Hours allowed for this Paper.)

Section 1.

1. What is the atomic theory, and what is its connexion with the laws of combining proportion?
2. Give instances which exhibit distinctly the difference between chemical affinity and other kinds of attraction?
3. Explain the principles of chemical notation, and point out clearly what part of that notation is conventional and what necessary.
4. What is meant by specific heat? Is there any connexion between the specific heat of a body and its equivalent?
5. Describe the leading articles of a proper set of chemical apparatus and chemicals for a beginner of the study.
6. What is the law of gaseous diffusion? Describe experiments to prove it.
7. Describe the preparation and experiments to show the properties of nitric acid.
8. Describe the properties and the chief compounds of calcium.
9. By what tests can you detect in any substance the presence of arsenic, mercury, or lead?
10. Give the chemical notation of common salt, gypsum, alum, litharge, lunar caustic, calomel, sal ammoniac, white sand; and name the substances represented by ZnO,SO_3; NO_5; CH_2; CaO,CO_2; KO,NO_5; HgO,SO_3; KBr; $NaO,CO_2 + HO,CO_2$.

Section 2.

Give a list of experiments to exhibit the laws of heat without any other apparatus than a couple of thermometers and such articles of domestic use as can be readily procured in any household.

EXPERIMENTAL SCIENCE.—Organic and Applied Chemistry.

(Three Hours allowed for this Paper.)

Section 1.

1. Give the chemical composition of gum arabic, gun cotton, grape sugar, alcohol, ethyle, vinegar, chloroform, camphor, and prussic acid.
2. Describe the process of fermentation, and compare it with that of putrefaction.
3. Describe the several effects produced in us by breathing. What gases are mischievous if taken into the lungs?
4. What remedies should be used to save the life of a person who has just taken common arsenic, sulphuric acid, corrosive sublimate, or sugar of lead?
5. Upon the presence of what substance does the nutritiousness of bread depend? What kind of bread contains the most nutriment? Is it always true that food which contains most nutriment in proportion to its weight is most nutritious?
6. Explain the action of tea, coffee, and alcohol upon the human body.
7. Upon what characteristics and the presence of what substance does the fertility of a soil depend?
8. Explain distinctly the chemical and physical requisites to form a good manure for the growth of a given plant on a given soil.

Section 2.

Draw up a syllabus, and indicate very briefly under each head, the needful experiments for a course of lessons to your first class on the elements of

1. Agricultural Chemistry. 2. Domestic Chemistry and Physiology.

EXPERIMENTAL SCIENCE.—Physics.

(Three Hours allowed for this Paper.)

Section 1.

1. What is meant by a couple? How is the effect of a couple measured?
2. Explain the action of the Genou.
3. Show by what modes rotatory motion may be made to communicate alternate rectilinear motion.
4. Describe the Whorling table and its use.
5. Define the metacentre of a floating symmetrical body.
6. What is Marriotte's law of the relation between the volumes of gases and the pressures upon them? How is it established?
7. Explain the principle and action of the centrifugal pump.
8. What connexion has been discovered between magnetism and electricity? What experiments may be used to demonstrate it?
9. Explain the electrical experiments made with the electric balls, the electric fly-wheel, the electric swan.
10. Describe the galvanic battery and its action.
11. What is a caustic? How can you show caustics by reflection and caustics by refraction?
12. Describe the camera obscura, the camera lucida, and the magic lantern.
13. Describe the Stanhope lens and Wollaston's doublet.

Section 2.

Give a list of the apparatus that you would require, and of the chief experiments that you would show for a course of lessons to your first class on

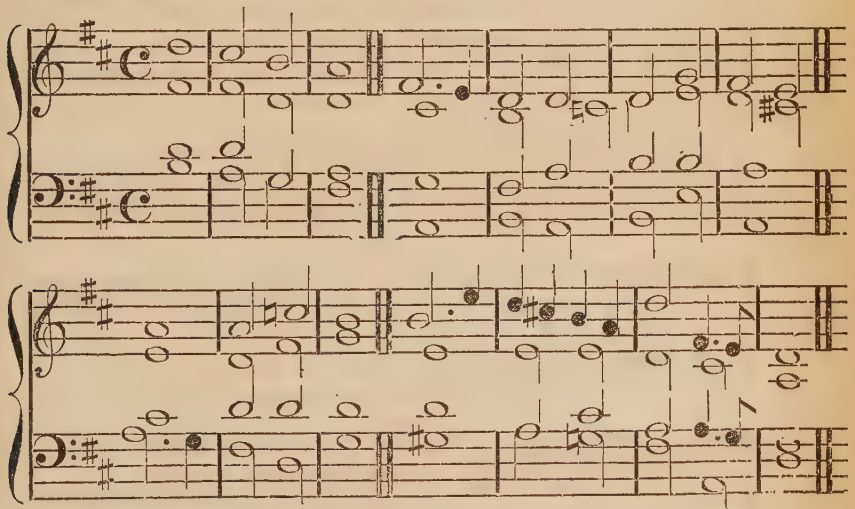
1. Pneumatics; or, 2. Electricity, magnetism, and galvanism; or, 3. Optics.

MUSIC.

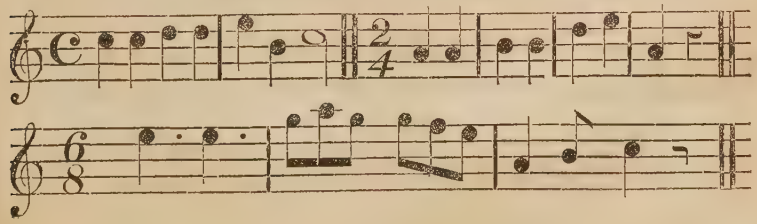
(Three Hours allowed for this Paper.)

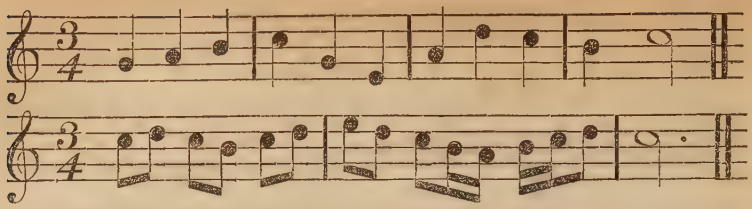
[Candidates are not expected to answer more than six questions, but these may be taken from any part of the paper.]

1. (1.) Show that the idea of Music comprises both an art and a science. (2.) Write out a table of signatures of every key, major and minor, naming the notes which are sharp or flat. (3.) Can it be ascertained by the signature whether a piece of music is written in a major key or in its relative minor? (4.) If not, state the method of ascertaining it. (5.) In what key is the subjoined chant written?



2. Define *accent, emphasis, syncopation, transposition.* How does accent differ from emphasis? What are the rules for accentuation? Mark where the accent falls in the adjoining passages.





3. Give the origin of the terms *Diatonic*, *Chromatic*, and show the force of *en* in *enharmonic*. Write the diatonic, chromatic, and enharmonic scale of G (Sol) major, ascending and descending.

4. Mention the chief rules to be observed in writing or playing thorough bass. Define *oblique*, *direct*, and *contrary* motion.

1st. Give an example of each motion, singly.

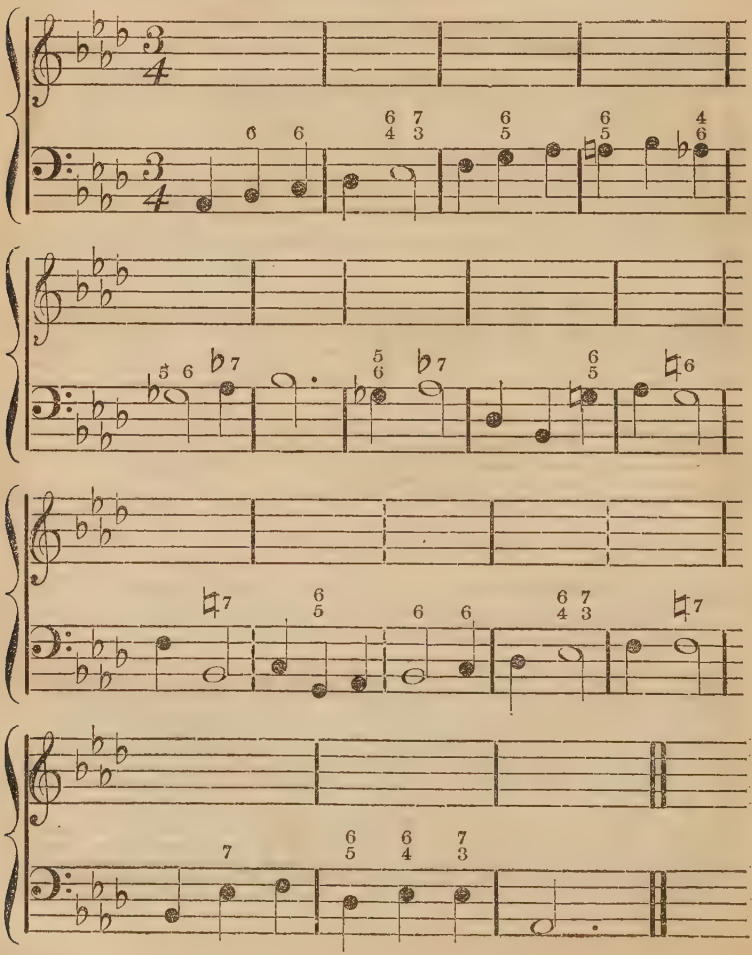
2nd. Give an example of the three motions united.

5. What are the derivatives of the common chord, and of the discord of the 7th, and how are the derivatives severally produced? What is meant by the harmony of the tonic, and the *attendant* harmonies? Write the chord of the tonic and the attendant harmonies to the following keys, viz.:

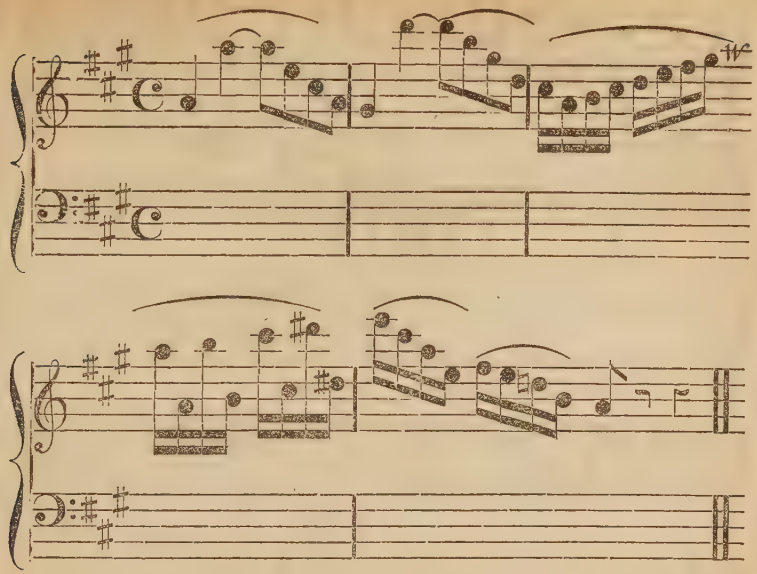
D (Re), A (La), B (Si), E (Mi), major.

B (Si), F ♯ Fa), G ♯ (Sol), C ♯ (Do), relative minor.

6. Fill up the following according to the figured directions

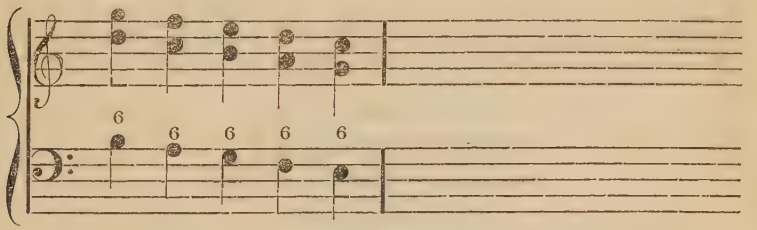


7. Compose your own bass to the given melody.



8. What is a discord? How do discords of *suspension* and *syncopation* differ from discords of *transition* and *addition*.

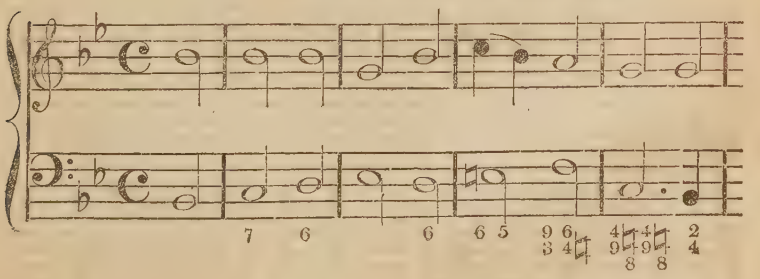
9. What are sequences? In the given example of a sequence of 6ths descending, point out how a sequence of 7ths and 6ths may be produced.

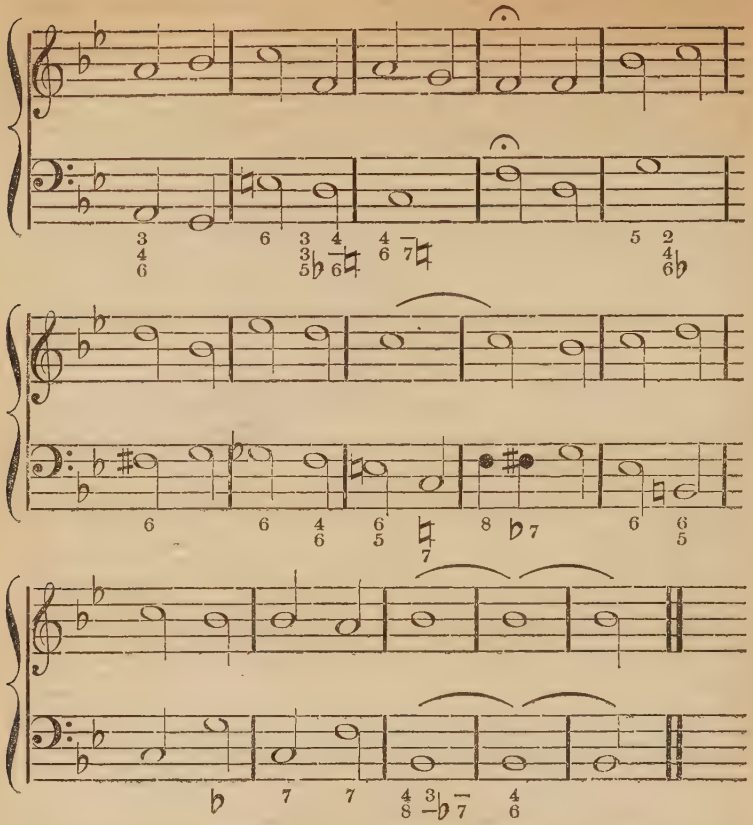


10 Explain the different species of modulation. Modulate from the key of C as follows:—

1. From C to D.
2. From C to E major.
3. From C to E♭
4. From C to F minor.

11. Add the inner parts of the following chorale, according to the figured directions.





FOR MALE STUDENTS IN WALES.

WELSH.

(Three Hours allowed for this Paper.)

1. Translate into English *one* of the two following passages:

"Canys yr oedd tabernacl wedi *ei wneuthur:* y cyntaf, yn yr hwn yr *oedd* y canhwyllbren a'r bwrdd, a'r bara *gosod;* yr hwn *dabernacl* a elwid, Y cyssegr. Ac yn *ol* yr ail *len*, yr oedd y babell, yr hon a *elwid*, Y cyssegr *sancteiddiolaf*. Yr hwn yr oedd y *thuser* aur *ynddo*, ac arch y cyfammod wedi ei goreuro o *amgylch;* yn yr *hon* yr oedd y crochan aur a'r manna ynddo, a gwialen Aaron, yr hon *a flagurasai*, a llechau y cyfammod; ac uwch ei *phen* cherubiaid y gogoniant, yn *cysgodi* y drugareddfa; am y rhai ni *ellir* yn awr *ddywedyd* bob yn rhan."

"Mor *ddefnyddiol* hefyd ac angenrheidiol y *barnwyd* hwn, a'i fod mewn bri a *chymmeriaeth* gyda phob gwyr o ddysg yn y Lladingiaith y *cyfansoddwyd* ef yuddi, ac wedi *ei gyfieithu* i'r rhan fwyaf o'r ieithoedd *sathredig* yn y parth yma o'r byd (sef *ieithoedd* y Seison, y Ffrancod, yr Ellmyn, yr Italiaid ac ereill, a *rhai* hefyd o ieithoedd Asia) er mwyn *iawn* sylfaenu 'r *bobl* gyffredin, ym *mhob* gwlad, yng *ngwirioncdd* a sicrwydd y Grefydd Gristionogol. Ac *dyma* yr achos a *barodd* i'r awdur *ei ysgrifenu* ar y cyntaf yn iaith ei *wlad* ei hun, ar draethod *cynghanedd*, er *lles* y cyffredin, yn enwedig y morwyr, er mwyn *eu* sefydlu yn y ffydd, a'u *harfogi* yn erbyn gau *grediniaethau* Cenedloedd, ac Juddewon, a Mahumediaid fel y *mae* yn mynegu yn *helaeth* yn y Rhagymadrodd."

2. Parse fully the words *in italics* in whichever of the above passages you have translated; explaining carefully the literal mutations, and comparing the grammatical construction with that of your own translation.

3. Translate into Welsh *one* of the two following passages:

"One morning, during the stay of the ship at this island, some of the natives brought to the captain his watch, which they had procured from out of his chest, and with looks of curiosity inquired what it was. He took it from them, wound it up, put it to the ear of one of them, and returned it. Every hand was now outstretched with eagerness to take hold of it: it was applied in turns to their ears: they were astonished at the noise it made; they listened again to it; turned it on every side, and exclaimed, 'It is alive!' They then pinched and hit it, as if expecting it would

squeak: but they looked at each other with wonder, laughed aloud, snapped their fingers, and made a sort of clucking noise with the tongue, expressing amazement."

"The earliest schools established in the provinces of the Western Empire were of civil foundation, and intended entirely for the purposes of civil education; and so they continued until the social system was subverted by the barbarian conquest. This revolution affected the literary in common with all other institutions; in the course of the sixth century profane learning entirely disappeared, together with the means of acquiring it: and before its conclusion the office of instruction had passed entirely into the hands of the clergy. The municipal schools of the empire gave place to cathedral or episcopal establishments, which were attached to every diocese, to the residence of the bishop, and throughout the country elementary schools were formed in many of the monasteries, and even in the manses of the parochial priesthood."

(No. 3.)

GENERAL EXAMINATION OF TRAINING COLLEGES.

CHRISTMAS, 1856.

FEMALE STUDENTS.

All your answers are to be written on this paper; answers written on any other paper will not be looked over.

You are not permitted to answer more than one question in each section.

Before beginning your answers, you are to fill up the following table, so far as it applies to you.

You will be so good as to do this, although you may not attempt to answer any part of the paper; which, in that case, you will return to the Inspector, *writing the words "not attempted," in large letters below.*

The name of the Training College at which you are now being examined.	*Your Christian Name and Surname* in full, *and the* current *year of your Age.*	*Do you attend this Examination as—* 1. *A resident Student?* 2. *A Teacher to be examined for a Certificate of Merit, and* from what School.	*If you are, or have been, a Student, state the month and year in which you entered the Training College, and the month and year in which you left it.*

HOLY SCRIPTURE.

(Three Hours allowed for this Paper.)

1.—*The supplementary questions are not to be attempted by* any candidate of the first year *who has not answered one question in each of the preceding Sections. No such candidate may answer more than two of the supplementary questions.*

2.—*Candidates of the second year, and teachers in charge of schools, may not answer more than six questions, but may choose them from any part of the paper.*

Section 1.

1. Name in order the chief events between the Deluge and the birth of Isaac. State concisely the most important lessons to be drawn from some of these events.
2. Give a full account of the song of Moses, and the circumstances of his death.
3. Write an account of one of these persons in the form of a lesson, with practical applications suitable for your first class; Jehoshaphat, Josiah, or Nehemiah.

Section 2.

1. Write out the most remarkable prophecies concerning the rejection of our Lord by the Jews, and the corresponding passages in the New Testament which show their fulfilment.
2. Describe the contents of one of the following Books: 1 Samuel, 2 Kings; and give a brief account of the characters of the most remarkable persons in that book.
3. Name in chronological order the prophets who flourished in the period between the death of Solomon and the Captivity, and give a succinct account of the writings of one of these prophets.

Section 3.

1. Enumerate, in order, the events of our Saviour's life, from the commencement of his public ministry to the evening before his crucifixion.
2. What parables and discourses of our Lord are recorded exclusively by St. Luke and by St. John? Explain the spiritual lesson taught by one of these parables or discourses.
3. What practical and spiritual lessons are illustrated by the history of these persons, Dorcas, Rhoda, Titus, Julius, Epaphroditus?

Section 4.

1. Explain fully one of these parables, with examples and illustrations,—
"The Ten Virgins." "The Wedding Garment." "The Lost Sheep."
2. Give an account of the last journey of St. Paul before his imprisonment.

SUPPLEMENTARY.

1. Write an analysis of *one* of the following portions of Holy Scripture, using the words of the text as far as possible:—

Romans, viii. Romans, xii. and xiii. 1 Corinthians, i. and ii.
1 Corinthians xv.

Or of three chapters from any one of the other Epistles.

Also append to this analysis at least six verses from the same Epistle, to illustrate the chief lessons which it conveys.

2. Explain the following passages, illustrate them by examples, and show the practical application.
"The weapons of our warfare are not carnal, but mighty through God to the pulling down of strongholds."
"After that faith is come we are no longer under a schoolmaster."
"What things were gain to me, those I counted loss for Christ."

3. Write out and explain the most important texts from the Epistles on some of the following points: Conformity to Christ, Intercessory prayer, Organization of the Church.

4. What women are named by St. Paul in his Epistles? What practical and spiritual lessons may be enforced by reference to the passages in which he names them.

5. What churches are named in the book of "Revelation?" Give the substance of the charge which St. John was directed to address to one or more of these churches.

6. Quote some of the most striking promises to the church, in the books of Isaiah, Hosea, and Micah.

7. Quote from the Old and New Testament passages that prove the Personality and Godhead of the Word, and the Holy Spirit.

8. What foreign nations are connected with Sacred History in the reigns of Solomon, Asa, and Josiah? Quote the most remarkable prophecies fulfilled in the present condition of these nations.

CATECHISM, LITURGY, AND CHURCH HISTORY.

(Two Hours allowed for this Paper.)

1.—*The supplementary questions are not to be attempted by* any candidate of the first year *who has not answered one question in each of the preceding sections. No such candidate may answer more than two of the the supplementary questions.*

2.—*Candidates of the second year, and teachers in charge of schools, may not answer more than six questions, but may choose them from any part of the paper.*

Section 1.

Prepare the notes of a lesson, not to exceed 25 minutes in the delivery, and adapted for a class of girls between 10 and 12 years old, on one of the following subjects, with reference to the catechism.

1. The Fifth Commandmant. 2. The means of Grace.
3. The Communion of Saints.

Section 2.

1. Write out one of the following articles, with illustrations from Holy Scripture.
1. Of the Old Testament. 2. Of sin after baptism. 3. Of the Sacraments.

Section 3.

1. Analyze the "Te Deum," or the general thanksgiving, and illustrate the most striking expressions of the former from Holy Scripture.
2. Name in order the parts of one of these services, Baptism, or Holy Communion, and write out, from either, one form of praise or thanksgiving
3. Give some account of the collects or lessons for one of these seasons, Advent, Epiphany, or Lent.

Section 4.

1. Give an account of the revision of the Prayer Book in the reign of Elizabeth.
2. Name the principal events in the lives of these prelates—Cranmer, Parker, and Whitgift.
3. Name the chief persons connected with the Anglo-Saxon Church.
4. Name some of the principal events and remarkable persons in the first four centuries of the Church History.

SUPPLEMENTARY.

1. Give some account of the early British Church, and state why its history is important.
2. Name the chief events connected with Augustine, Theodorus, Wilfrid, or Columban.
3. At what time did each of the following prelates flourish:—Anselm, Langton, Chicheley, Arundel, and Warham? On what account were they severally remarkable?
4. Give some account of these pontiffs, and describe the circumstances which connect them with English History, Gregory VII., Innocent III., and Clement VI.
5. What measures were taken before the Reformation to protect the independence of the National Church?
6. Name the leading persons in the Church at the death of Henry VIII., and give a brief account of their characters.
7. What distinguished persons suffered martyrdom in the persecutions in Asia Minor, Gaul, and Africa, during the first three centuries?
8. Give some instances of the charity of the early Christians, as displayed in their conduct towards each other, and to the heathens among whom they lived.
9. Describe briefly the origin and proceedings of one of our own societies for the extension of the Christian faith.

GRAMMAR.

(Three Hours allowed for this Paper.)

1.—*The supplementary questions are not to be attempted by* any candidate of the first year *who has not answered one question in each of the preceding sections. No such candidate may answer more than two of the supplementary questions.*

2.—*Candidates of the second year, and teachers in charge of schools, may not answer more than six questions, but may choose them from any part of the paper.*

Section 1.

1. What is meant by the *case* of a noun? What means have we of determining it in English?

2. Write out in parallel columns, the first, second, and third persons singular of the present and past tenses, and the particles, of the verb *to lay*, and of the two verbs *to lie*.
3. Explain why the participle is so called, and illustrate your answer by examples of its use.

Section 2.

Parse the words printed in italics in the following passage :—

But all is in His hand whose *praise* I seek.
In *vain* the poet sings, and the world hears,
If He *regard* not, *though* divine the *theme*.
'Tis not in artful measures, in the chime
And idle tinkling of a *minstrel's lyre*,
To charm *His* ear, whose eye is on the heart;
Whose frown can disappoint the *proudest strain*,
Whose approbation—*prosper* even *mine*.
—*The Task*.

Section 3.

Write out either the passage in section 2, or one of the following passages, in simple prose, expressing its meaning as exactly as you can, and in the fewest words :—

Though Heaven be shut,
And Heav'n's high Arbitrator sit secure
In his own strength, this place may be exposed,
The utmost border of His Kingdom, left
To their defence who hold it; there perhaps
Some advantageous act may be achieved
By sudden onset.
—*Paradise Lost*.

I have ventured,
Like little wanton boys that swim on bladders,
These many summers in a sea of glory;
But far beyond my depth: my highborn pride
At length broke under me; and now has left me,
Weary, and old with service, to the mercy
Of a rude stream, that must for ever hide me.
—*Henry VIII*.

Section 4.

1. Analyze one of the passages in Section 3.
2. Examine the use of the pronoun in the 4th line of the passage in section 2. What other part of speech is employed in a similar construction?
3. Show by examples what parts of speech can form by themselves the subject and predicate respectively of a proposition.

SUPPLEMENTARY.

1. What is the best general rule for dividing words into syllables? Can you give the subordinate rules?
2. Enumerate the *distributive* and *indefinite* pronouns. How does "few" differ in meaning from "a few"?
3. What *concords* exist in English grammar? Point out what is wrong in the following sentence :—
We respect men which acts consistently.
4. Show that, in determining what part of speech a word is, we must frequently be guided by the context.
5. Select two words from each of the above passages of poetry, of Latin, of French, and of Saxon origin, respectively.
6. Write out in separate lists the principal Saxon and Latin prefixes.
7. Give an account of the origin of as many of the following words as you can: *wrong, session, only, calico, slave, tantalize, expulsion, saunter, effect, contradict, twilight*.
8. To what great stock of language does our own belong? State briefly (with dates) the circumstances of its introduction into this country, and the principal modification which it has since undergone.
9. Name the principal English writers in the 17th and 18th centuries.
10. How should you characterize the *style* of Milton? Contrast the language of Paradise Lost with that of The Task.
11. In what metre are the principal poems of Milton composed? Can you quote a couplet written in rhyming heroics?
12. Write out a short sketch of the life or writings of any well-known English authoress.

GEOGRAPHY.

(Three Hours allowed for this Paper.)

1.—*The supplementary questions are not to be attempted by* any candidate of the first year *who has not answered one question in each of the preceding sections. No such candidate may answer more than two of the supplementary questions.*
2.—*Candidates of the second year, and teachers in charge of schools, may not answer more than six questions, but may choose them from any part of the paper.*

Section 1.

Draw a map of *one* of these portions of land, inserting the names of the principal towns :—
1. The coast line of England from the mouth of the Tees to Harwich, with so much of the interior as is drained by the rivers between those points.
2. The counties drained by the Severn and its tributaries.
3. Scotland north of the Firth of Forth, with the adjacent islands.

Section 2.

(These questions may be illustrated by sketches.)

1. Describe the physical features, climate, and productions of Italy.
2. Name the principal rivers of France, their tributaries, and the cities on their banks, stating briefly for what those cities are most remarkable.
3. Name the principal coalfields of Europe, and give some account of their extent, and their effects upon the habits of the people.
4. Enumerate the rivers that flow into the Black Sea, and trace the course of *one* of these rivers, naming its tributaries and cities on its banks.

Section 3.

1. Name the possessions of England in Africa, and give a full description of the physical features, and condition of *one* of these possessions.
2. Name the rivers of Hindostan, and describe the course of the Ganges.
3. Give a clear account of New Zealand, its physical features, and the past and present condition of the inhabitants.
4. Which of the British Colonies are most important for population, natural and artificial productions? Support your statement by facts.

Section 4.

1. Name the chief cities of Asia, and state on what account they are severally remarkable.
2. Name the United States of America, distinguishing the free states by a cross; and give some account of the climate and population of the North-western States.
3. Name the countries between the Indus and the Red Sea, and give a brief account of the physical features, the chief cities, and the customs of the inhabitants.

SUPPLEMENTARY.

1. Describe the currents of the Atlantic Ocean, and their effects upon navigation, and upon the climate of the adjoining countries.
2. Describe the scenery of the Alps, and give an account of the glaciers.
3. Describe the causes and effects of the monsoon.
4. Give a general account of the geological structure of the British Isles, and explain its bearing upon the condition and occupations of the inhabitants.
5. Enumerate the most remarkable animals found in Australia, Egypt, and South America. Give an account of the structure and habits of *one* in each locality, showing its adaptation to the climate and other circumstances.
6. Describe the principal phenomena of the Arctic Zone.
7. Enumerate the chief divisions of the human race, and describe the characteristic features and habits of the most remarkable.
8. Describe the chief vegetable productions of Ceylon, Australia, and Canada.
9. Compare the temperature and climate of the following places, Madeira, New York, Rio Janeiro, Lisbon, Canton, and account for the difference.
10. Describe the movements of the earth, and the effects of those movements upon the seasons, the ocean, and the atmosphere.

ENGLISH HISTORY.

(Three Hours allowed for this Paper.)

1.—*The supplementary questions are not to be attempted by* any candidate of the first year *who has not answered one question in each of the preceding sections. No such candidate may answer more than two of the supplementary questions.*
2.—*Candidates of the second year, and teachers in charge of schools, may not answer more than six questions, but may choose them from any part of the paper.*

Section 1.

1. Name the Saxon Kings from Egbert to Edward the Elder, and give an account of the chief events in *two* of these reigns.
2. Describe the incursions of the Northmen in the ninth century.
3. Name the chief events in the reigns of Canute and Edward the Confessor, and describe the character of each of these princes.
4. Describe the most remarkable customs of the Anglo-Saxons.

Section 2.

1. What events in the reigns of John and Henry III. are most important in the history of our Constitution? Give a clear account of the circumstances which led to these events.
2. Which of the Plantagenet princes were engaged in the Crusades? Describe the character of one of the princes whom you name.
3. State any facts that illustrate the condition of the people of England in the 14th and 15th centuries.
4. Name the queen consorts in these reigns—Edward III., Richard II., and Henry V.; and state what you know of their characters.

Section 3.

1. Describe the character of Henry VII., and illustrate it by events in his reign.
2. Give some account of Cardinal Pole.
3. To what causes may the popularity of Elizabeth's reign be mainly attributed?
4. What events and discoveries had most effect upon the civilization of England in the 15th and 16th centuries.

Section 4.

1. Name the chief events in the reign of George III.
2. State the circumstances under which princes of the Tudor or Stuart line gave assistance to any foreign Protestant churches.
3. Name the queen consorts in English history who have been most remarkable as good wives or mothers.

SUPPLEMENTARY.

1. Arrange in chronological order the principal events in the reign of Henry VIII., *or*, of Queen Elizabeth.
2. With what foreign princes were the sovereigns of the Tudor line connected by alliance or affinity? Give some account of two of these princes, with especial reference to their influence upon the state of religion in Europe.
3. What were the chief manufactures of England in the 16th century? State some facts showing the extent of these manufactures, and their effects upon the condition of the people.
4. On what account were the following persons celebrated:—Sir Thomas Gresham, Martin Frobisher, John and Sebastian Cabot, Ascham, and Holbein?
5. Give some account of the suppression of monasteries, and of the charitable and religious purposes to which any part of their revenues was applied.
6. Describe the progress of the naval power of England from the accession of Henry VIII. to the death of Elizabeth.
7. Give some account of the education and habits of women of rank in the 16th century.
8. Give some account of the housekeeping and domestic habits of English yeomen in the reign of Henry VIII.
9. What amusements had most effect upon the character of the people in the reigns of Henry VIII. and Elizabeth?
10. Give some account of the changes in ecclesiastical and domestic architecture during the 16th century.
11. State some facts which prove the progress of mental cultivation during this period.

STUDENTS IN FIRST YEAR.

SCHOOL MANAGEMENT.

(Three Hours allowed for this Paper.)

The candidate may select any questions which she can answer completely.

[*Write the first line of your first answer as a specimen of copy-setting in* large hand; *and the first line in your second answer as a specimen of copy-setting in* small hand.]

1. Give an accurate account of the manner in which you *have been instructed to* teach the elements of reading *during your residence* in this Institution.
2. Name the reading-books used in your *practising* school, the classes in which they are severally used, and give a clear summary of the contents of one book which is read in the first class.
3. To what points should your attention be chiefly directed in teaching girls to read? What faults are most prevalent? By what methods are they most effectually remedied?
4. Explain exactly the most effective method of giving out and revising a lesson in dictation to the 1st and 2nd divisions of your school.
5. What are the best exercises to teach girls to write simply and correctly?
6. How do you propose to teach numeration?
7. How do you propose to teach subtraction? Apply your lesson to this sum 100003−8.
8. Explain clearly the working of this sum $\frac{3}{4} \div 2$.
9. Explain the meaning and use of a map as to a class of children.
10. Prepare the heads of a series of lessons *for three months* on the elements of geography. Show in detail how far the extent of the series agrees with the time.
11. Illustrate the use you would make of the black-board in giving a lesson on the geography of Switzerland *or* Hindostan.
12. Explain the best mode of suspending a map for the use of a class. What faults are generally committed in the use of apparatus for collective lessons?
13. Describe exactly the class-register used in the school in which you were educated, or in the practising school of this Institution. How do you find the average attendance, weekly and monthly?

STUDENTS IN FIRST YEAR, AND TEACHERS IN CHARGE OF SCHOOLS.

NOTES OF A LESSON.

(Two Hours allowed for this Paper.)

Prepare the notes of *two* lessons on some of the following subjects. State exactly what are the objects you have in view in giving each lesson, and for what class of children you consider it to be suitable. State also what apparatus and illustrations you propose to use; and, if necessary, draw a rough sketch, such as you would prepare on the black-board.

1. The hand, head, or mouth of man.
2. The structure and habits of the cat, camel, or kangaroo.
3. The use and abuse of stimulants, or warm clothing.
4. Courtesy, self-denial, or procrastination.

STUDENTS OF SECOND YEAR, AND SCHOOLMISTRESSES ATTENDING EXAMINATION.

SCHOOL MANAGEMENT.

(Three Hours allowed for this Paper.)

Candidates may select any questions, but must answer them fully.

[*Write the first line of your first answer as a specimen of copy-setting in* large hand; *and the first line of your second answer as a specimen of copy-setting in* small hand.]

N.B.—The question marked with an asterisk *must* be answered by every candidate.

*1. From the subjoined extract from a class-register calculate the average age of the children, the average attendance for the week, the number present at all, and the average number of days attended by each child present at all.

Age.	Name.	Monday.		Tuesday		Wednesday.		Thursday.		Friday.	
12¼	J. N.				+			+		+	
10	N. S.		+	+					+	+	+
11¼	M. E.	+	+	+	+	+	+	+	+	+	+
9⅔	R. N.		+		+				+		
12½	G. J.			+		+	+		+	+	
11⅔	F. R.		+	+		+					
13	A. B.			+	+				+		+
10½	C. D.			+							
12¾	N. M.										

2. Prepare the heads for a series of six lessons on physical geography for your first class; and state clearly what illustrations you propose to use for each lesson.
3. Describe fully the apparatus and illustrations you intend to use for collective lessons in natural history. To what extent do you propose to teach natural history? Give your reasons for this.
4. What faculties of children are called in active exercise by a good lesson on each of the following subjects: Colour, the structure of an insect, climate, the character of Jacob? Give clear reasons for your statement.
5. Upon what principles does the cultivation of memory depend? By what exercises is it best prepared to acquire, retain, and reproduce useful information?
6. What do you mean by method? Explain the relation between principles and methods; and illustrate this by examples.
7. What exercises are best calculated to train children to acquire knowledge for themselves?
8. What are the chief practical objections to the elliptic and simultaneous methods? How can these objections be obviated?
9. What do you mean by the organization of schools? Upon what principles does its efficiency and success chiefly depend?
10. To what extent, in what subjects, and under what circumstances do you consider the assistance of ladies as visitors desirable?

STUDENTS OF SECOND YEAR.

ESSAY.

(Two Hours allowed for this Exercise.)

The subject matter discussed in each part of the essay should be noted in the margin.

Write an essay upon *one* of the following subjects:—

1. Prudence, with especial reference to the position of a young schoolmistress.
2. The special objects of mental training in a girls' school.
3. Intercourse with the parents of your pupils.

ARITHMETIC.

You are not allowed to answer more than one question in each section; but, when there are two sums in the same question, both should be worked.

(Three Hours allowed for this Paper.)

Section 1.

1. What is meant by a system of Numeration? What by a system of Notation? When is a system said to be decimal?
2. Show how you can divide by 10, 100, 1,000, &c., more easily than by any other number. If in multiplying by 7,000, we multiply by 7 and add three figures, what principles are illustrated by the process?
3. What do you mean by reducing fractions to lowest terms? Show the correctness of the process employed. Prove by means of a diagram that $\frac{2}{3} = \frac{8}{12}$.

Section 2.

1. If a piece of ribbon measures 21 yards 2 nails, how many bonnets can be trimmed with 17 such pieces, suppose each bonnet requires 2½ yards? How many crowns, half-crowns, shillings, and groats amount to 99*l.* 16*s.* 4*d.*, taking of each an equal number?
2. A man spends 155*l.* 5*s.* 7*d.* per year, how much will he lay by in 37 years out of 200*l.* per annum?
If 6½ million visitors entered the Crystal Palace in 26 weeks, what was the average attendance per day?
3. Find by Practice the value of 8,632 articles at 1*l.* 14*s.* 3¾*d.*
1,280*l.* is divided among three persons, so that their portions are as 5, 3, 2, respectively, how much does each receive?

Section 3.

1. Find the sum, difference, product, and quotient of $2\frac{7}{10}$ and $5\frac{3}{8}$.
The sum realized by a bankrupt's estate is 7,848*l.*, being $\frac{3}{5}$ of his debts, find the amount of the debts, and the dividend paid.
2. How long will it take 17 men to earn 50*l.*, if 12 men in 6½ days can earn 13 guineas?
3. Divide 71 by ·635. Find the value of ·178 of a mile. Express ·75 of a shilling as decimals of each of the coins of the realm.

Section 4.

1. Find the interest on 895*l.* at 2¼ per cent. for 7 years 2 months. How long will it be before 374*l.*, put out at interest at 4 per cent., will realize a profit of 100*l.*?
2. There are two schools, one containing 650 children, and the other 340 children: 5 per cent. of the former are generally absent, 7·5 of the latter: what is the average attendance in each?
The present worth of a debt, due 6 months hence, is 25*l.* 10*s.*, and the rate of discount is 6 per cent. per annum, what is the amount of the debt?
3. Sold 16 cwt. 2 qrs. of soap, which cost 2*l.* 6*s.* 8*d.* per cwt., at 6¼*d.* per lb., what was the gain upon the whole, and also per cwt.?

Section 5.

1. Compare the advantages of a decimal system, having 1*l.* for the unit, with those of one which has a farthing for the unit?
2. What is the readiest way of converting our present money into decimals of 1*l.*? Give examples.
3. Add together the 18th part of 45*l.*, the 19th part of 23*l.*, and the 20th of 86*l.*; 7 flo. 5 cents. 7 mils.

Section 6.

1. What books are required in book-keeping by single entry, and what is the use of each?
2. What are the respective advantages of single and double entry?

DOMESTIC ECONOMY.

(Two Hours allowed for this Paper.)

Section 1.

1. What kinds of food are required for young children? State clearly the reasons.
2. Give a clear account of the potato, and of the various uses to which it is applied.
3. Give receipts for Irish stew, and soups with and without meat; estimate the cost; and give an account of the nutritious qualities of each.

Section 2.

1. Name all the materials used in washing; and show for what properties or qualities each of these materials is useful.
2. What practical lessons have you had in the kitchen and laundry, either as a pupil-teacher or as a student in training? State exactly what time has been so employed.
3. Describe accurately the best system for teaching needlework, including the fixing and cutting out. What difficulties may you expect to find in supplying a school with work, and what expedients would you propose to the managers?

Section 3.

1. Calculate the weekly and annual expenditure of a schoolmistress, having one or two pupil-teachers residing with her, and occupying a furnished house rent-free.
2. Give clear instructions to a pupil-teacher about the purchase and uses of clothing materials, with full estimate of cost and value.

Section 4.

1. Describe the best treatment for sprains, slight wounds, and whitlows.
2. Describe the poisonous vegetables most commonly found in England, the symptoms produced by them, and the best remedies.
3. Write a lesson on one of these subjects for girls about to leave school:—
   Personal neatness. Frugality. Self-denial.

MUSIC.

(Three Hours allowed for this Paper.)

1.—*The questions in Division II. are not to be attempted by any* candidate of the first year *who has not answered one question in each of the preceding sections. No such candidate may answer more than two of the questions in Division II.*

2.—*Candidates of the second year, and teachers in charge of schools, may not answer more than six questions, but may choose them from any part of the paper.*

Division I.

Section 1.

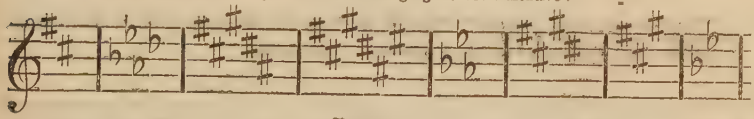
1. How are musical sounds expressed? Write out all the notes on the lines and spaces, together with the additional lines and spaces, above and under the staves of the treble and bass clefs.
2. What are the different kinds of notes made use of in musical composition? How is the length of a note ascertained? How does a *point* affect a note or rest?
3. Of what use is the *stave*, the *clef*, the *sharp*, the *flat*, and the *natural*, and when are *flats*, *sharps*, and *naturals* called *accidentals*?

Section 2.

1. Describe an *interval*. Which intervals are *consonant* and which are *dissonant*? How are unisons produced?
2. What is the meaning of the word *scale*, and how many sorts of scales are there in music?
3. Write out the *chromatic* scale of E♪ (Mi), ascending and descending, and state the difference between a *diatonic* and a *chromatic* semitone.

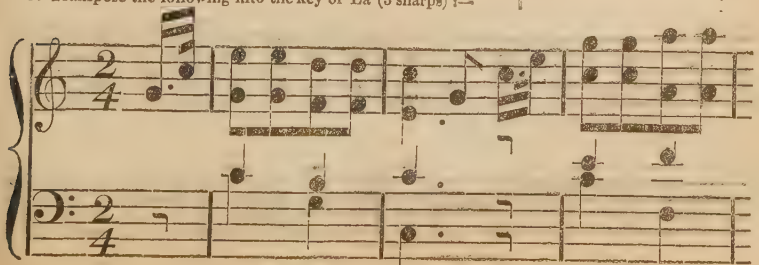
Section 3.

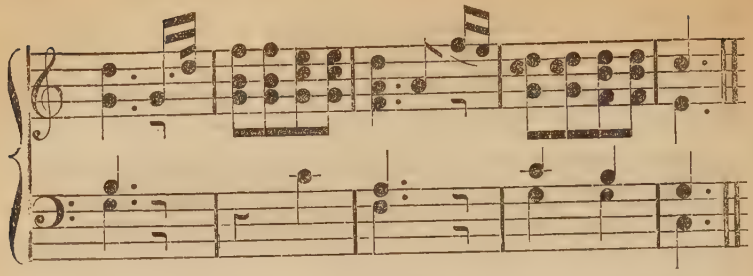
1. Write out a table of the different species of time.
2. (1.) Besides the term *gamut* for the diatonic scale or key, what other name is given to the same series of notes? (2.) What is the chief difference between major and minor keys? (3.) Is there any other interval minor in minor keys?
3. Of what major and minor keys are the following signatures indicative?



Division II.

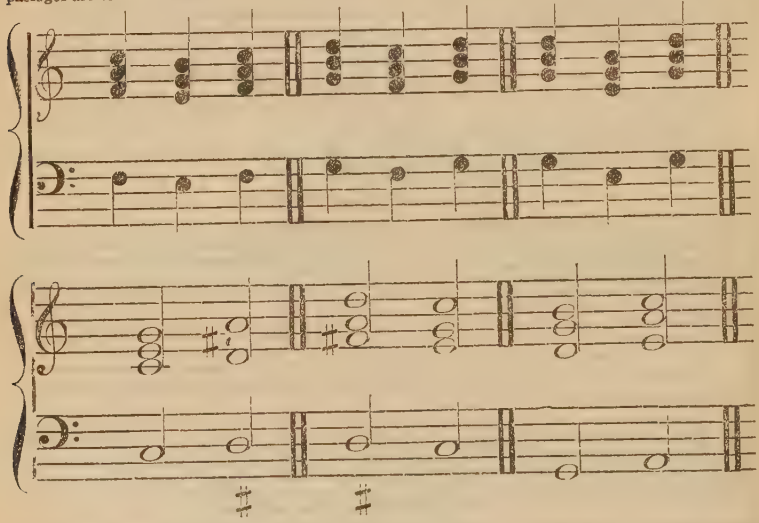
1. What is the difference between melody and harmony? What is meant by *triplets*, *tritone*, *expression*, *accent*, *emphasis*, *appoggiatura*, *turn*, *shake*?
2. What is transposition, and what is gained thereby?
3. Transpose the following into the key of La (3 sharps):—



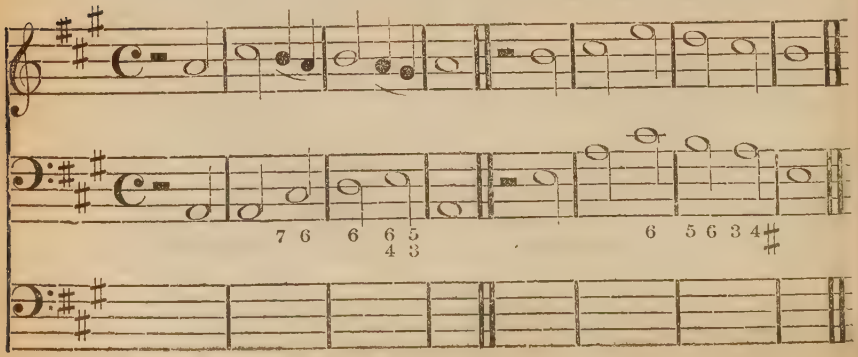


4. What are the technical terms used for each degree of the scale?
5. Of what does the common chord consist, and in how many positions can it be taken?
6. Write common chords in their different positions in the following keys (with their relative minors), D (Re), E (Mi), A (La♭), B♭ (Si♭).

7. Show on the blank staves how the consecutive 5ths and octaves which occur in the following passages are to be rectified.



8. What is meant by an *inversion?* What are the inversions of a *minor third*, a *major seventh*, a *minor sixth*, and a *perfect fourth*.
9. Harmonize the following psalm tune, and add the *radical* bass.



10. Render into English the following Italian words denoting the speed and character of a movement, viz., *adagio, andante, allegro, largo, maestoso, presto, vivace, andantino quasi allegretto,* and explain the following signs :

WELSH.

(Three Hours allowed for this Paper.)

1. Translate into English *one* of the two following passages :—

"*Dwg* ar gof *iddynt fod* yn ddarostyngedig i'r tywysogaethau a'r awdurdodau, fod *yn ufudd*, fod yn barod i bob gweithred *dda*. Bod heb *gablu neb*, yn anymladdgar, yn *dirion*, gan dangos pob addfwynder *tu og* at *bob* dyn. Canys yr *oeddym* ninnau hefyd *gynt* yd annoethion, yn anufudd, yn cyfeiliorni, yn *gwasanaethu* chwantau ac amryw *feluswedd*, gan fyw mewn drygioni a *chenfigen*, yn ddigasog, yn *casau* ein *gilydd*."

"Dros gnwech *awr*, nid *oedd* dim ond y dystryw gwyllt o *bob* ochr, yn enwedig o du y *Saeson*, fel y *mae* Gildas, ein cyntadwr, yr hwn a *aned* yn y flwyddyn honno, yn *sicrhau*. En lluvedd, y *waith* hon, er eu *hamled* a sathrwyd fel nad *oroso d* cymmaint a *rhestr* gyfan yn ddiglwyf; a'r maes a *gueddir yd* cyn *dewed* a chelaneddau'r *Meirw*, fel *mai* nid gwaith *ysgafn*, dros diwrnodau oedd *eu claddu*. Y flwydyr *hon* a *ymladdwyd* yn y flwyddyn 495. Arthur, mab y brenin, a ymddygodd yma *yn llawn* calondid a *medr* i drin *arfau*."

2. Parse fully the words *in italics*, in whichever of the above passages you have translated, explaining carefully the literal mutations, and comparing the grammatical construction with that of your own translation.

3. Translate into Welsh *one* of the two following passages :—

"The extremes of heat and cold which prevail in China at opposite seasons of the year, and the custom of living much in the open air, are the causes of the difference between the summer-cap and the winter-cap. The former is made of thin filaments of wood, surmounted by a red, white, or blue ball on the sharp point at the top. A bunch of crimson silk or horse-hair hangs down from it all round. The latter is made of black velvet or fur, is turned up with a brim all round, and is also ornamented with a ball and a fringe of red silk."

"Every mind which is yet a stranger to science is in some respects in the same situation with that of Galileo, before he turned his telescope to the heavens. Such a mind has a world of wonders to learn, many of which are as extraordinary as those which then revealed themselves to the philosopher. The consciousness of discovery was Galileo's alone: the novelty and sublimity of the study of the heavens remain the same for all by whom it has yet been unenjoyed. And so, indeed, it is with every other sort of knowledge."

(No. 4.)

GENERAL EXAMINATION OF CANDIDATES FOR REGISTRATION, AND FOR INFANT-SCHOOL CERTIFICATES.

EASTER, 1856.

All your answers are to be written on this paper; answers written on any other paper will not be looked over.

You are not permitted to answer more than one question in each section. Number your answers to correspond with the questions, and begin to write them *(as far as possible) opposite to the sections to which they severally refer.*

Before beginning your answers, you are to fill up the following table:—

Your Christian Name and Surname in full, *and the* current *year of your Age.*	*The Name of your School, and of the nearest Post Town.*	*The Name of the School at which you are now being examined.*

RELIGIOUS KNOWLEDGE.

(Three Hours allowed for this Paper.)

Section 1.

1. Write out the history of the patriarch Jacob.
2. Enumerate in order the kings of Judah, and give a detailed history of one of them.
3. Give an account of the book of Nehemiah.

Section 2.

1. What practical directions does our Lord give in his Sermon on the Mount on the following points: Forgiveness, Almsgiving, Prayer, Over-carefulness?
2. Give the substance of St. Peter's defence, when he was accused of going to the Gentiles and of eating with them
3. Explain the meaning of the word "Charity," as used in the New Testament, and prove your answer by quotations from the teaching of our blessed Lord and his Apostles.

Section 3.

1. Answer in the words of the Church Catechism, "What dost thou chiefly learn in these articles of thy belief?" and explain why a different tense is introduced in describing the office of the third person of the blessed Trinity.
2. Explain the phrase "Means of Grace," and enumerate those mentioned in the Church Catechism in the order in which they stand.
3. State in a simple and practical way the line of argument you would adopt with a class of children, to convince them of the *necessity* of prayer in order to a righteous life, proving each position by texts from Holy Scripture.

Section 4.

1. Write out "the prayer of St. Chrysostom" and explain why it does not end as most of the collects in the Liturgy do, viz., with the words "through Jesus Christ our Lord."
2. We have followed too much the devices and desires of our own hearts." What doctrine is taught in these words? Prove the doctrine from Holy Scripture.
3. Write out one of the following articles, with Scripture proofs.

VII. Of the Old Testament. XV. Of Christ alone without sin.
XXV. Of the Sacraments.

Section 5.

1. What duties does the Church urge upon us in the "Exhortation?"
2. Enumerate in order the different seasons of the Christian year as they stand in the prayer-book, and give your reasons for considering such observances useful.
3. State the different religious duties contemplated in the office of Holy Communion, and quote texts to prove the necessity of each.

ARITHMETIC.

(Three Hours allowed for this Paper.)

Section 1.

1. Explain what is meant by *numeration*. What is the meaning of the terms *dividend*, *divisor*, *quotient*?
2. Explain the process of borrowing employed in subtraction.
3. Subtract 394 from 1001, and explain each step in the process.

Section 2.

1. How many yards are there in 27 bales of cloth, each containing 15 pieces, and each piece 15 yards?
2. Reduce 756843 grains to lbs. Troy. In 13897564 minutes how many years?
3. If a pair of trousers take 2¼ yards, a waistcoat ¾ of a yard, a coat 1¾ yard, what quantity of cloth would be required to make 84 pairs of trousers, 63 coats, and 12 waistcoats?

Section 3.

1. Suppose a boy saves 10*d.* per week from 14 to 18 years of age, and 1*s.* 8*d.* per week from 18 to 21, how much will he be worth at that time?

2. Make out a bill for the following articles:—16 yards superfine broad-cloth, at 27*s.* 6*d.* per yard; 18 yards second ditto, at 14*s.* 9*d.* per yard; 13 yards brown ditto, at 11*s.* 10*d.*; 14¼ yards scarlet ditto, at 24*s.* 4*d.*; 62¾ yards kerseymere, at 9*s.* 8*d.*

3. How much will the school pence of 312 children amount to in 4½ years, reckoning 45 weeks to the year, and 2*d.* a week to each child?

Section 4.

1. If 100*l.* gain 4*l.* in one year, what will 737*l.* 12*s.* 6*d.* gain in the same time?
2. If 64 yards of carpet, 3 qrs. wide, cover a floor, how much of 5 qrs. will be sufficient?
3. If 150*l.* pay for 8 boys for a year, what will be the expense of 20 boys for half a year?

Section 5.

1. Explain the meaning of the terms *numerator*, *common denominator*, *common measure*, and reduce $\frac{5}{8}$, $\frac{7}{10}$, $\frac{8}{9}$, to a common denominator.
2. What quantity of shalloon that is ¼ yard wide will line 9½ yards of cloth that is 2½ yards wide?
3. Add together ¾ of a foot, $\frac{2}{5}$ of a yard, and $\frac{3}{8}$ of a mile.
4. Divide ·324 by 36.
5. Express 17*s.* 6*d.* decimally.

Section 6.

1. What is the interest of 205*l.* 15*s.* for ¼ of a year, at 4 per cent?
2. What is the insurance, at 17*s.* 9*d.* per 100*l.*, on 4,182*l.* 10*s.*?
3. What must be paid for the purchase of 10,000*l.* stock, at 105¾ per cent., with the broker's commission at $\frac{1}{8}$ per cent.?

ENGLISH GRAMMAR.

(Three Hours allowed for this Paper.)

Section 1.

1. Explain briefly what is meant by Orthography, Etymology, Syntax, and Prosody.
2. Name the parts of speech and explain, as to children, the use of each.
3. Mention, with examples, the different kinds of nouns, pronouns, adverbs, conjunctions, and numeral adjectives.

Section 2.

1. Write down the *plurals* of the following words: army, medium, focus, hoof, roof, sheaf, chief, key, brother, phenomenon, index; and the *feminines* of the following; testator, sultan, emperor, actor, knight, earl, marquis, sloven.
2. What do you mean by inflexion? To what inflexion are adjectives subject, and for what purpose?
3. Name the different voices, moods, and tenses (with the meaning of those three words,) of a verb according to any system of grammar that you have learned, and conjugate the verb "to choose" through all of them, in the first person singular only.

Section 3.

1. What is meant by a noun of multitude? what peculiarities of syntax are to be noted in the use of such nouns?
2. Analyze and parse, with syntax rules, the following:
"To do good and to distribute, forget not; for with such sacrifices God is well pleased."
3. Give as many instances as you remember of violations of syntax prevalent in your neighbourhood, and correct them.

Section 4.

1. Distinguish, with instances, between primitive, derivative, and compound words.
2. Derive Acorn, michaelmas, surly, cab, circumnavigate, interlude, preternatural, and retrograde; and give derivatives from luna (the moon), pono (I place), urbs (a city), and locus (a place).
3. Write down in column all the Latin and Greek prefixes which you remember, with their meaning, and in an opposite column combine them with suitable words.

Section 5.

What is the difference between verse and prose? what between blank verse and rhyme. To which class does the following passage belong? Restore it to its metrical form, write it out, and punctuate it correctly, to illustrate your answer:

"The quality of mercy is not strained it droppeth as the gentle rain from heaven upon the place beneath it is twice blessed it blesseth him that gives and him that takes tis mightiest in the mightiest it becomes the throned monarch better than his crown it is an attribute to God himself and earthly power doth then show likest Gods when mercy seasons justice."

GEOGRAPHY AND HISTORY.

(Three Hours allowed for this Paper.)

GEOGRAPHY.

Section 1.

1. State carefuliy the length, breadth, and superficial area of England: describe its position in latitude and longitude, its shape, coal-fields, and salt-mines.
2. Name and describe the position of the smaller British Isles, giving a particular account of one of them. How do you account for the general absence of islands on the east coast of Great Britain?
3. Contrast England and France in their shape, size, mountain chains, river-systems, and position of chief towns.

N.B.—A map should accompany the answer to each of the above questions.

Section 2.

1. Give a careful account of the Mediterranean Sea, naming in their proper place its bays, gulfs, and islands.
2. Describe the size, shape, and position of the Atlantic Ocean, naming the seas connected with it, and the chief rivers flowing into it.
3. Point out the chief differences between the Atlantic and Pacific Oceans.

Section 3.

1. Name the countries in which *cotton* is grown, and the chief ports from which it is sent to this country. Specify other countries in which it might be grown with great advantage to England. Give your reasons.
2. From what countries do we chiefly obtain *wool?* What are the chief physical features of these countries respectively? Have these any effect on the growth and quality of the wool?
3. Is *iron* more an article of import or export? Give reasons at length for your answer.

HISTORY.

Section 1.

1. State what you have read of Agricola's doings in Britain.
2. To which of the Saxon kings should you compare him? Give your reasons.
3. Under what circumstances did the union of the Saxon and Norman lines take place, and with what result?

Section 2.

Give an account, such as you would to your *first* class, of *one* of the following:—
1. The origin of Parliament.
2. The invention of printing, and its introduction into this country.
3. The Reformation.

Section 3.

1. Name the most peaceful periods of English history.
2. Give a short account of the accession of the House of Hanover to the British throne.
3. Mention the chief inventions and discoveries of the 19th century.

SCHOOL MANAGEMENT.

(Three Hours allowed for this Paper.)

[*Write the first line of your first answer as a specimen of copy-setting in* large hand; *and the first line in your second answer as a specimen of copy-setting in* small hand].

Section 1.

1. Classify the several parts of a teacher's work included under the term School Management.
2. In which part of this work of school management is an inexperienced teacher most likely to fail? Give your reasons.
3. Give three rules, such as you would think it most important for young teachers to bear in mind in their relations,—
(*a*). To the children. (*b*). To their parents. (*c*). To the managers of their schools

Section 2.

1. Construct a time-table of lessons for the week.
2. How would you organize a school of 100 children (boys and girls mixed), with two pupil-teachers and a sempstress?
3. What is meant by the tripartite system? Draw the plan of a school-room arranged on this system.

Section 3.

1. Describe what you consider the best method of teaching some one of the following subjects:—
(*a*). Writing, noticing the merits or demerits of the several copybooks in most general use.
(*b*). Geography, showing the several ways in which the black-board may be used in this lesson.
(*c*). Reading, giving your reasons for or against the phonic system.

Section 4.

1. What are the arguments commonly urged for and against corporal punishment? State your own opinion on this subject.
2. Classify the ordinary faults of children, with the most appropriate means of correction in each case.
3. State as briefly and as clearly as you can, a few general principles that should guide a teacher in the use of rewards and punishments.

Section 5.

1. Describe the several books necessary for a complete set of school registers.
2. Show how the average attendance of each week and year may best be ascertained and exhibited.
3. Show how school registers may be made to supply statistical information in reply to the following questions:—
(*a*). For what length of time do children, on an average, attend your school?
(*b*). What proportion leave before they reach the first class?

SCHOOL MANAGEMENT.

(Paper for Teachers of Infant Schools.)

(Three Hours allowed for this Paper.)

Section 1.

1. Prepare the sketch of a lesson upon *one* of the following subjects for a class of children between 5 and 7 years of age:—
The sheep; the duck; the potato, or bread.
Add to this sketch an account of the best arrangement of such a class, and of the methods used in collective teaching, including illustrations.

Section 2.

1. Give a clear account of the difficulties which you may expect to meet (1) in instructing, and (2) in managing a school of 80 to 100 infants, in a village or town where no provision has previously been made for infant training.

2. Upon what qualities in a teacher does the good order of a school chiefly depend? State the various mechanical devices by which the discipline is improved.

Section 3.

1. Draw the plan of a school for 120 infants. Give also the dimensions of the gallery and desks which you would require.

2. Describe accurately the organization of such a school, and the apparatus required.

Section 4.

1. Describe exactly the system on which you propose to teach *reading*, and the progress which you would consider satisfactory at the end of 6, 12, 18, and 24 months, from 4 to 6 years of age.

2. Enumerate all the subjects of instruction for children between 4 and 7 years old, with a brief account of the best method of teaching each subject.

3. Describe the effects of different methods of teaching upon the mental development of children between 5 and 7 years of age, taking any two of the common subjects of instruction by way of examples.

Section 5.

1. Write a clear and full account of the use you would make of two pupil-teachers in an infant school. Add to this a statement of the lessons which you propose to give those teachers, with a list of text-books on each subject.

2. Write out the heads of the lectures on infant school-teaching which you have heard since Christmas, and a full account of one lecture on some point connected with moral and religious training.

EXTRA PAPER.

I.—EUCLID.

(Three Hours allowed for this Paper.)

N.B.—*This paper contains three subjects* (*viz.*, geometry, algebra, *and* mechanics), *one or other of which must be taught to male pupil-teachers in the later years of their apprenticeship.*

Candidates are not permitted to answer questions in more than one *of the three sections into which this paper is divided.* No marks will be given for papers in which this direction is not observed.

No pupil-teacher is allowed to commence apprenticeship with masters who have neither obtained certificates nor passed for registration (including this paper).

Mistresses are not *required to attempt this paper.*

Masters declining this paper, but passing satisfactorily in others, *will be accepted in fulfilment of the conditions of the Minute of 2 April* 1853, *and will not be disqualified to remain in charge of all pupil-teachers apprenticed to them before the* 1*st of January* 1855.

Section 1.

1. To draw a straight line, perpendicular to a given straight line of unlimited length, from a given point without it.

2. At a given point in a given straight line, to make a rectilineal angle equal to a given rectilineal angle.

3. In any right-angled triangle, the square which is described upon the side subtending the right angle is equal to the squares described upon the sides which contain the right angle.

4. If a straight line be divided into any two parts, the rectangle contained by the whole and one of the parts is equal to the rectangle contained by the two parts, together with the square of the aforesaid part.

5. If a straight line be divided into any two parts, the squares of the whole line and of one of the parts are equal to twice the rectangle contained by the whole and that part, together with the square of the other part.

6. If a point be taken within a circle, from which there fall more than two equal straight lines to the circumference, that point is the centre of the circle.

7. The angles in the same segment of a circle are equal to one another.

8. A segment of a circle being given, to describe the circle of which it is a segment.

II.—ALGEBRA.

1. Reduce the expression $3\,(a - 2\,.\,b + c) - 2\,\overline{(b - a - c + a)} + 4\,(c - \left\{2\,b - \frac{a}{2}\right\})$, to its simplest form.

2. Divide $x^4 + 3\,a^3\,x - 2\,a^4$ by $x^2 + a\,x - a^2$, and test the result by making $a = a$.

3. Prove that $\frac{a^2 - (b - c)^2}{(a + c)^2 - b^2} + \frac{b^2 - (a - c)^2}{(a + b)^2 - c^2} + \frac{c^2 - (a - b)^2}{(b + c)^2 - a^2} = 1$.

4. Divide $a + b - c + 2\sqrt{ab}$ by $\sqrt{a} + \sqrt{b} - \sqrt{c}$.

5. Solve the equations—

$$(a)\ 15\,x - 24 = 20 + \frac{x}{3}.$$

$$(b)\ \frac{2\,x + 1}{29} - \frac{402 - 3\,x}{12} = 9 - \frac{471 - 6\,x}{2}.$$

6. Solve the equations—

$$(a)\ \sqrt{x + 9} = 1 + \sqrt{x}.$$

$$(b)\ a\,x + b\,y = c.$$

$$a\,x - b\,y = \frac{c}{2}.$$

7. From a sum of money one fourth is taken away, one fifth of the remainder is added, and the result is less than the original sum by 30*l*. What was the original sum?

III.—MECHANICS AND MENSURATION.

1. The carriage-way of a street is 832 ft. 9 in. long, and 62 ft. 8 in. wide, what is the cost of paving it with blocks of granite at 9*s.* 6*d.* a square yard?

2. Why is the area of a triangular field said to be half the product of the base and the perpendicular height? Find, in acres, roods, &c., the area of a triangular field, of which the base is 17 chains 58 links, and the perpendicular upon it is 12 chains 8 links.

3. The diameter of a well is 3 ft. 8 in., and its depth is 64 ft., what is the cost of sinking it at 7*s.* 4*d.* a cubic yard.

4. What is exactly meant by the modulus of a machine? If 15-horse-power be applied to a machine, and lift 3,300 cubic feet of water in an hour through a height of 40 yards, what is the modulus of the machine, supposing a cubic foot of water to weigh 1,000 ounces avoirdupois?

5. If the distances from the fulcrum of two forces acting in the same direction on a lever, and keeping it at rest, be 2 and 3 feet respectively, and the pressure on the fulcrum be 15 pounds, what will be the magnitudes of the forces?

6. Two forces, whose magnitudes are 12 and 5 pounds, act at right angles to each other on a point, what is the magnitude of the force which will keep the point at rest?

EXAMINATION OF CANDIDATES FOR LECTURERSHIPS.

ENGLISH HISTORY.

At the head of each paper write your name *and* college.

In selecting questions to answer, you are requested to bear in mind—

(a.) *The precise extent of your reading;*

(b.) *That one question at least should be answered fully under* each *of the great periods of English history;*

(c.) *That not fewer than six questions should be answered fully.*

Section 1.

ADAM SMITH'S *Wealth of Nations*, Books I. and II.

1. What is Adam Smith's account of the causes of the prosperity of new colonies? How far do his arguments apply to colonies which are no longer dependent on the mother country? What reciprocal effects on the mother country may be expected to result from (*a*) dependent, (*b*) independent colonies?

2. Give an account of the rise and progress of commercial towns after the fall of the Roman Empire. In what respects are these commercial towns peculiarly modern growth?

3. On what causes do the wages of labour depend? What influences tend to depress, and what to raise the social condition of the labourer? Compare the condition of the labouring class now with what it was under Henry VII. and Charles II.

Section 2.

BLACKSTONE, Books I. and II.

1. Enumerate the principal sources of English law, with illustrations of each, taken from the practice of the present day. Add any instances which you can recollect to exemplify the authority claimed at different periods of history for these several sources.

2. "The King can do no wrong." State the exact meaning of this political maxim at the present day, distinguishing the sense in which it is universally true from that in which it has been held to be true at different times of our history.

3. Write the heads of a lecture, for a class of students of the second year, on the different kinds of property recognised by the law of England, and on the connexion between the history of English property and the history of English politics. The following words should be illustrated in the course of the lecture:—

Knight Service, Homage, Wardship, Marriage.
Real, Personal.
Freehold, Copyhold, Leasehold.
Entail, Corporation, Mortmain, Devise, Mortgage.

Section 3.

General History (to the end of the Plantagenet Dynasty).

1. At what time was this island first known to the Romans? To what portions of it does Cæsar's description in strictness apply? Give the particulars of this description. What part was performed by Suetonius Paullinus and Agricola respectively, in perfecting the work of conquest? Describe Britain as a Roman province.

2. Under what general heads would you group the causes which led to the consolidation of the Heptarchy? Describe the principal Saxon institutions. In what relation did the Danes stand to the Normans, on the one hand, and to the Saxons, on the other? Give a short account of the civil and ecclesiastical position of the kingdom under Edward the Confessor.

3. What effect did feudalism have in bringing about that state of society which distinguishes modern from ancient history, and how were its effects modified in England?

4. What circumstances tended to soften the distinction between the Norman and Saxon races after the Conquest? Give instances.

5. The Plantagenets were connected with the south of France. What effects did this have on our previous relations with Normandy, and how did it act on the consolidation of France and England respectively?

6. Describe briefly the origin and constitution of Parliament. Give the date of the divisions into two houses, and mention in what reigns the House of Commons obtained the greatest advantages up to the date of the wars of the Roses.

7. Compare the wars of Edward III., and the motives which dictated them, with those of Henry V. Describe the government and internal administration of towns in the time of Edward III.

Section 4.

General History (Tudor Dynasty).

1. Write out short characters of Henry VII., Henry VIII., Edward VI., Mary, Elizabeth; adding illustrative anecdotes, and developing the influence which the personal character of each sovereign had upon the events of their several reigns.

2. Write out the heads of an introductory lecture, for a class of students of the first year, on the ecclesiastical state of England at the period immediately preceding the Reformation. The object of the lecture is assumed to be that of bringing into strong relief the more obvious points of distinction between the English Church before and after the Reformation. The following words should be illustrated in the course of the lecture:—*Abbey, convent, chantry, church, monk, friar, parson, legate, first fruits, appeals, pilgrimages, vicar, patronage, saints-days, breviary, missal.*

3. Write short accounts of Wolsey, Sir Thomas More, Latimer, and Sir Philip Sydney, as illustrating the *manners* of the times in which they lived.

4. What were the claims of Mary Queen of Scots to the English crown? What circumstances rendered these claims peculiarly dangerous to Elizabeth and to England? Give the particulars of Mary's trial and sentence.

Section 5.

General History (the Stuarts).

1. What successful and what unsuccessful attempts were made by the House of Commons in the reign of James I. to establish the privileges which they now possess?

2. Give a short account of the various attempts to bring about an union between England and Scotland before the reign of Queen Anne.

3. What is the writ of Habeas Corpus? What circumstances led to the enactment of the Habeas Corpus Act? What additions have since been made to it?

4. What was Strafford's plan for upholding the royal authority, and by what means did he purpose to execute it? What was the importance of hurrying on his arrest, when the Commons had determined to impeach him? Give the particulars of his attainder. What informalities characterised the proceedings?

5. Sketch the characters of Bishop Burnet, the Earl of Halifax, and the Earl of Shaftesbury.

6. Examine the claims of James II. to be considered a champion of toleration.

7. With what countries was England brought into more immediate relations by the wars of Louis XIV.?

8. How did the revocation of the Edict of Nantes affect the condition of France and England?

ENGLISH LITERATURE.

Passages.

N.B.—*Each Candidate is requested, in the first place, to give his attention to the passages taken from the works which he has selected for special study; after completing which he may try an additional passage from a book not included in his list, giving the preference, as far as possible, to an author of a different age. Those, for example, whose lists are confined to Shakespeare and Milton, should take the passage from Chaucer or that from Pope.*

1. Piers Ploughman.

1. What seems to be the metre, and what the rules of alliteration in the poem of "Piers Ploughman?"

2. Explain, as far as you can, the allegory of "Do—well," "Do—bet," and "Do—best," with the offices assigned to each.

3. Render the following passage into modern English, and explain the more antiquated words:—

"Be unkynde to thyn evene cristene,
And al that thow kanst bidde,
Delen and do penaunce
Day and night evere,
And purchace al the pardon
Of Pampilon and Rome,
And indulgences y-nowe,
And be *ingratus* to thi kynde,
The Holy Goost hereth thee noght,
Ne helpe may thee by reson;
For unkyndenesse quencheth hym,
That he kan noght shyne,
Ne brenne ne blase clere,
For blowynge of unkyndenesse.
Poul the apostel
Preveth wheither I lye.
Si linguis hominum loquar, etc.
"For-thi beth war, ye wise men,
That with the world deleth,
That rich ben and reson knoweth,
Ruleth wel youre soule,
Beth noght unkyne, I conseille yow,
To youre evene cristene,
For manye of yow riche men,
By my soule! men telleth,
Ye brenne, but ye blase noght,
That is a blynd bekene.
Non omnis qui dicit Domine! Domine! intrabit, etc.

2.—Chaucer.—1. *Prologue.*

"A shipman was ther, woned fer by West:
For ought I wote, he was of Dertemouth.
He rode upon a rouncie, as he couthe,
All in a goune of falding to the knee.
A dagger hanging by a las hadde hee
About his nekke under his arm adoun.
The hotte sommer hadde made his hewe al broun.
And certainly he was a good felaw.
Ful many a draught of win he hadde draw
From Bordeux ward, while that the chapman slepe.
Of nice conscience toke he no kepe.
If that he faught, and hadde the higher hand,
By water he sent hem home to every land.
But of his craft to reken wel his tides,
His stremes and his strandes him besides,
His herberwe, his mone, and his lodemanage,
Ther was non swiche, from Hull unto Cartage.
Hardy he was, and wise, I undertake;
With many a tempest hadde his berd be shake.
He knew well alle the havens, as they were,
Fro Gotland, to the Cape de finistere,
And every creke in Bretagne and in Spaine:
His barge ycleped was the Magdelaine."

1. Explain the allusions; select and explain the more uncommon and antiquated words.

2.—*The Knight's Tale.*

" The praier stint of Arcita the stronge,
The ringes on the temple dore that honge,
And eke the dores clattereden ful faste,
Of which Arcita somwhat him agaste.
The fires brent upon the auter bright,
That it gan all the temple for to light;
A sweet smell anon the ground up yaf,
And Arcita anon his hond up haf,
And more encense into the fire he cast,
With other rites mo, and at the last
The statue of Mars began his hauberke ring;
And with that soun he herd a murmuring
Ful low and dim, that said thus, Victorie.
For which he yaf to Mars honour and glorie.
And thus with joye, and hope wel to fare,
Arcite anon unto his inne is fare,
As fayn as foul is of the bright sonne."

2. Show the variations in this passage from modern English.
3. Compare the metre of the "Knight's Tale" with that of the "House of Fame."

3.—SHAKESPEARE.

1. Compare the scene in which Richard III. persuades Anne Plantagenet to marry him, with that in which he persuades Edward IV.'s queen to give him her daughter Elizabeth. Draw the aspect of Richard's character presented in both scenes.
2. Write out the plot of Hamlet, and sketch the character of Laertes.
3. What is the purpose of the chorus in Henry V.? Do we find the same or a similar artifice in any other play of Shakespeare's?
4. Explain the allusions and obscure phrases, and give the substance of the context of two of the following passages:—

1.

" By this scimitar
That slew the Sophy and a Persian Prince,
That won three fields of Sultan Solyman,
I would outstare the sternest eyes that look,
Outbrave the heart most daring on the earth,
Yea, mock the lion, when he roars for prey,
Pluck the young sucking cubs from the she bear;
To win thee, lady. But alas! the while,
If Hercules and Lychas play at dice,
Which is the better man; the greater throw
May turn by fortune from the weaker hand:
So is Alcides beaten by his page.
And so may I, blind Fortune leading me,
Miss that which one unworthier may attain,
And die with grieving."

2.

" Thus doth it well appear, the Salique Law
Was not devised for the realm of France;
Nor did the French possess the Salique Land,
Until four hundred one and twenty years
After defunction of King Pharamond,
Idly supposed the founder of this law,
Who died within the year of our redemption,
Four hundred twenty-six; and Charles the Great
Subdued the Saxons, and did seat the French
Beyond the river Sala, in the year
Eight hundred five. Besides, their writers say
King Pepin, which deposed Childerick,
Did, as heir general, being descended
Of Blithild, which was daughter to Clothair,
Make claim and title to the crown of France.
Hugh Capet, also, that usurped the crown
Of Charles the Duke of Lorain, sole heir male
Of the true line and stock of Charles the Great,
To fine his title with some shew of truth,
(Though in pure truth it was corrupt and naught)
Conveyed himself as heir to the Lady Lingare,
Daughter to Charlemain, who was the son
To Lewis the Emperor, and Lewis the son
Of Charles the Great.

3.

" But now behold
In the quick forge and working house of thought,
How London doth pour out her citizens.
The mayor and all his brethren, in best sort,
Like to the senators of antique Rome,
With the plebeians swarming at their heels,
Go forth and fetch their conquering Cæsar in.
As by a lower but by loving likelihood,
Were now the general of our gracious empress
(As in good time he may) from Ireland coming,
Bringing rebellion broached on his sword,
How many would the peaceful city quit
To welcome him? Much more, and much more cause,
Did they this Harry. Now in London place him;
As yet the lamentation of the French
Invites the king of England's stay at home.
The emperor's coming in behalf of France
To order peace between them: and omit
All the occurrences, whatever chanced,
Till Harry's back-return again to France."

4.

" What were you snarling all, before I came,
Ready to catch each other by the throat,
And turn you all your hatred now on me?
Did York's dread curse prevail so much with heaven
That Henry's death, my lovely Edward's death,
Their kingdom's loss, my woeful banishment,
Could all but answer for that peevish brat?
Can curses pierce the clouds and enter heaven?
Why then give way, dull clouds, to my quick curses.
Though not by war, by surfeit die your king;
As ours by murder to make him a king!
Edward thy son, that now is Prince of Wales,
For Edward my son, that was Prince of Wales,
Die in his youth by like untimely violence.
Thyself a queen, for me that was a queen,
Outlive thy glory like my wretched self!
Long mayst thou live to wail thy children's loss,
And see another as I see thee now,
Deckt in thy rights, as thou art stalled in mine.
Long die thy happy days before thy death,
And after many lengthened hours of grief
Die, neither mother, wife, nor England's queen.
Rivers and Dorset, you were standers by,
And so wast thou, Lord Hastings, when my son
Was stabbed with bloody daggers! God, I pray Him,
That none of you may live your natural age,
But by some unlooked accident cut off."

5.

" *P.* Her obsequies have been as far enlarged
As we have warranty: Her death was doubtful;
And but that great command o'ersways the order,
She should in ground unsanctified have lodged
Till the last trumpet; for charitable prayers,
Shards, flints, and pebbles should be thrown on her.
Yet here she is allowed her virgin crants,
Her maiden strewments, and the bringing home
Of pall and burial.
L. Must there no more be done?
P. No more be done.
We should profane the service of the dead
To sing a requiem and such rest to her
As to grace parted souls."

4.—BACON.

1. Give a brief abstract of the Essays on Nature, and on Custom and Education.
2. Give the substance of Pan, Nemesis, or Prometheus.
3. Explain the following allusions.
1. "The part of Epimetheus might well become Prometheus in the case of discontentments, for there is not a better provision against them."

2. "There is use of ambitious men in pulling down the greatness of any subject that overtops, as Tiberius used Macro in pulling down Sejanus."

4. Illustrate from history or poetry, and explain in full:

1. "Suspicions that the mind of itself gathers are but buzzes; but suspicions that are artificially nourished and put into men's heads by the tales and whisperings of others have stings."

2. "Ask counsel of both times: of the ancienter time, what is best: of the latter time, what is fittest."

3. "The way of fortune is like the milky way in the sky; which is a meeting or knot of a number of small stars not seen asunder, but giving light together: so there are a number of little and scarce discerned virtues, or rather faculties and customs, that make men fortunate."

5. Put the substance of Bacon's remarks upon youth in the Essay on Youth and Age, into the form of advice to a student going for the first time to take charge of a school.

5.—COWLEY—*Davideis.*

1. To what preceding English poet does Cowley appear most indebted in the "Davideis"? Give the date of this and of his other principal publications. What proof does his poetry contain of his appreciation of physical science? Has any poet, his contemporary, left evidence of a similar feeling?

2.

"Slaughter the weary'd Riphaims' bosom fills;
Dead corpse emboss the vale with little hills.
On th' other side, Sophenes' mighty King
Numberless troops of the blest East does bring;
Twice are his men cut off, and chances ta'en;
Damascus and rich Adad help in vain."

Give a full explanation of the allusions in this passage.

6.—MILTON.

1.

"*Thus was this place*
A happy rural seat of various view;
Groves whose rich trees wept odorous gums and balm;
Others, whose fruit *burnish'd with golden rind*
Hung amiable, Hesperian fables true,
If true, here only, and of delicious taste:
Betwixt them lawns, or level downs, and flocks
Grazing the tender herb, were interposed;
Or palmy hillock, or the flowery lap
Of some *irriguous* valley spread her store,
Flowers of all hue, and without thorn the rose.
Another side, umbrageous grots and *caves*
Of cool recess, o'er which the mantling vine
Lays forth her purple grape, and gently creeps
Luxuriant; meanwhile murmuring waters fall
Down the slope hills, dispersed, or in a lake
That to the fringed bank with myrtle crown'd
Her crystal mirror holds, unite their streams.
The birds their quire apply; airs, vernal airs,
Breathing the smell of field and grove, *attune*
The trembling leaves, while universal Pan,
Knit with the Graces and the Hours in dance,
Led on the eternal Spring."

P. L.—B. iv.

Paraphrase the words italicised, and explain the classical allusions. What emendation has been proposed for "Hesperian Fables"? Justify Milton's expression.

2.

"Here in close recess
With flowers, garlands, and sweet-smelling herbs,
Espoused Eve deck'd first her nuptial bed;
And heavenly quires the hymenean sung,
What day the genial angel to our sire
Brought her in naked beauty more adorn'd,
More lovely than Pandora, whom the gods
Endow'd with all their gifts; and O too like
In sad event, when to the unwiser son
Of Japhet brought by Hermes, she ensnared
Mankind with her fair looks, to be avenged
On him who had stole Jove's authentic fire."

P. L.—B. iv.

Explain the allusions.

3.

"In this gate none pass
The *vigilance* here placed."

Quote from Milton other instances of substantives used thus.

4. Explain accurately:

"Branches that mock Our scant manuring."
"More colour'd than with stone Of costliest emblem."
"O loss of one in Heaven to judge of wise Since Satan fell."
"Mark what I areed thee now: Avant."
"Proud limitary cherub."
"Th' empiric alchemist."

5. Mark the scansion and syllabic quantities:

"And corporeal to incorporeal turn."
"Both ascend
In the visions of God. It was a hill . . ."

What are Milton's principal modes of varying the monotony of his metre?

7.—DRYDEN.

1. What was the occasion of Dryden's writing the "Hind and Panther?" What answers were made to it either serious or ludicrous?

2. Explain the application of the two fables of the Doves and the Swallows.

Explain the allusions in

1.

"Your Delphic sword, the Panther then replied,
Is double-edged, and cuts on either side.
Some sons of mine, who bear upon their shield
Three steeples argent in a sable field,
Have sharply taxed your converts, who, unfed,
Have followed you for miracles of bread;
Such, who themselves of no religion are,
Allured with gain for any will declare;
Base lies with bold assertions they can face,
But dint of argument is out of place;
The grim logician puts them in a fright.
'Tis easier far to flourish than to fight."

2.

"Unpitied Hudibras, your champion friend
Has shown how far your charities extend."

8.—POPE.—*Essay on Criticism.*

1. Examine Pope's idea of the relation between style and substance in poetry.

2. In what points are Pope's canons of criticism true? What elements in his mode of judging should we reject? What additional qualities do we require in the highest criticism?

3.

Pride, malice, folly, against Dryden rose,
In various shapes of parsons, critics, beaux;
Might he return, and bless once more our eyes,
New Blackmores and new Milbournes must arise."

"The mighty Stagyrite first left the shore,
Spread all his sails, and durst the deep explore;
He steer'd securely, and discover'd far,
Led by the light of the Mæonian star."

Explain the allusions.

9.—Gray.—*Bard.*

"No more our long-lost Arthur we bewail;
All hail, ye genuine kings, Britannia's issue, hail."

Explain the historical allusion here. How far was the 'prophecy' of the first verse literally fulfilled? Compare the style of Gray's Odes with Wordsworth's and Campbell's.

GEOGRAPHY.

You are requested to answer at least two questions in each section, and at least half your answers are to be illustrated by maps or diagrams.

Section 1.

1. Give an estimate of the total population of the earth, and a classification of its inhabitants with reference to religious creeds, mentioning the names and relative numbers of the principal divisions as given by geographical authorities.

2. Describe the principal lines of communication proposed to be effected between the dense populations of Western and Southern Europe on one hand, and those of Eastern and Southern Asia on the other, with a comparison of their presumed relative merits, and the difficulties to be encountered in carrying them out.

3. Give the foreign possessions of the different European Powers, describing some of their most valuable peculiarities, ethnological, commercial, and military, with an account of their progress, development, or decay.

4. Enumerate in chronological order the most important Arctic expeditions of different nations since the middle of the sixteenth century, dividing them into those to the east of Greenland, to the west of Greenland, and through Behring's Straits.

5. State in detail some of the more important frontier geographical questions, the want of accurate knowledge of which has caused difficulties between this country and the United States of America. Enumerate those which appear at the present moment to bear upon the relations between Russia and other nations.

Section 2.

1. What were the political divisions of Great Britain during the British, Roman, Saxon, and early Norman period of our history?

2. Compare the extent of English territory in the East Indies in 1800 and 1856. Give the dates and occasions of the various accessions that have taken place in that interval. What parts of the Indian peninsula are still under the absolute or limited sway of native sovereigns?

3. Describe the changes in the political map of Europe since the year 1772.

4. Give a detailed account of the Zollverein; with a brief comparison of the commercial wealth and resources of the various contributory states.

5. Enumerate, with an approximation to their annual value, the chief articles of import into this country from Russia. From what sources have these been drawn during the war; and what channels of trade have thereby been opened to English enterprise? Which of these promise to be permanent?

Section 3.

1. Give an account of the coral formations in the Pacific.

2. Give a detailed account of the means adopted to determine accurately the figure and density of the earth.

3. Give an account of the tides and oceanic currents, and mention and explain the more important anomalies.

4. Give an account of the geographical distribution of the six plants that supply the largest amount of vegetable human food.

5. Write a lecture for a class on the connexion between physical and political geography.

APPLIED MATHEMATICS.

1. Describe simple apparatus for demonstrating experimentally: 1. The parallelogram of forces. 2. The equality of moments. 3. The laws of friction.

2. A horizontal projecting arm 10 ft. long is fastened by a hinge to a vertical wall. Three feet below this hinge another projecting arm is fastened by a second hinge. The latter arm is 5 feet long, and is fastened by a hinge to the former arm in such a manner as to keep it horizontal. The weight of the supporting arm is 1 cwt., of the horizontal arm 2 cwt., and a weight of 3 tons is suspended at the extremity of the latter. Find the direction and intensity of the pressure at each hinge.

3. The specific gravity of water being 1 and of sulphuric acid being 1·850, it is found that a Nicholson's Hydrometer weighing 250 grains requires 72 grains to sink it to the requisite depth in water; how much will it require to sink it to the same depth in sulphuric acid? Illustrate your answer by a figure.

4. Show that the principle of virtual velocities is true in hydrostatics. Apply it to the case of the Bramah press.

5. A body is projected at an angle of 15° with a velocity of 10 ft. per second; find the range.

6. Investigate the properties of epicycloidal teeth.

7. Give examples of cams.

8. Prove D'Alembert's principle; apply it to determine the resultant of the effective forces on a body which revolves about a fixed axis; and find the centre of percussion of the body.

9. Investigate a general expression for the pressure of a mass of earth having a horizontal surface, on a vertical revetment wall.

10. Describe and explain the construction of a portable weighbridge.

11. Describe and explain the friction brake.

12. A heavy body of any form rests upon a surface of any form; find in what case the equilibrium will be stable.

13. When a cord passes along any curve surface, and is kept in equilibrium by forces at its two extremities; find the conditions of equilibrium, friction being taken into account.

14. Describe and explain Mercator's Chart. How are the meridional parts computed?

15. Draw a specimen of a map of an estate as surveyed, and give the field book to correspond.

16. Show how to divide an irregular field with a given number of sides among sundry claimants, so that they may all have the use of a pond at a given point in the field.

17. Define a couple, and show that all statical couples are equivalent to each other whose planes are parallel and moments equal.

18. A triangular plate of uniform thickness and density is supported horizontally by a prop at each angle: show that the pressure on each prop $= \frac{1}{3}$ the weight of the plate.

19. A body of elasticity ·75 is projected upwards with a velocity equal to that due to gravity in one second, so as to strike a horizontal plane, and in two seconds returns to the point of projection: required the distance of the plane from that point.

20. Find the ratio of the power to the weight in toothed wheels.

21. Calculate approximately the elevation of the sight on a rifle to enable the marksman to hit an object at a given distance, not taking into account the resistance of the air.

22. Show how to determine whether the equilibrium of a floating body be stable or unstable.

23. Find the space clear of water in a diving bell sunk to a given depth.

24. Explain the parallel motion, demonstrate its principle, and show how to construct for it in a steam-boat engine.

25. Describe the screw-propeller, and explain the paradox known as the negative slip.

26. Find the axis of a couple which is the resultant of three couples acting in planes at right angles to each other.

27. Describe the dead-beat escapement, and prove its advantages.

28. Investigate the catenary when the force is vertical and proportional to the horizontal projection of the arc.

29. Describe briefly the sidereal clock, the transit instrument, and the mural circle; and explain their use in determining the position of a heavenly body.

30. Suppose the apparent time, deduced from an observation of the sun on January 16th in longitude 45° east of Greenwich, to be 6h., find the mean time; 9m 58s being the equation of time at apparent noon at Greenwich on January 16, and 10m 19s on January 17.

31. Give an account of the manner in which Bradley separated the effects of aberration and nutation.

Explain how the phenomenon of aberration enables us to determine the velocity of light.

32. State the laws of refraction to which rays of light are subject.

What is meant by the critical angle?

Explain the appearances to an eye under water.

33. When an object moves from or towards a spherical reflector, the image of it moves in an opposite direction.

In the case of a lens the object and image move in the same direction.

The formulæ which you employ are to be investigated.

34. Explain the construction of Galileo's Telescope.

Draw a pencil of rays from a point near the axis of the instrument to the eye. Find the magnifying power. Why is this construction useless for astronomical purposes?

The method here described appears to proceed frequently from an idea that leads to the like practice in other branches, chiefly in English reading and arithmetic; which idea is, that the lessons should be given at the first, and for some time simply in the mechanical way or by rote, reserving the explanatory or rational method to a later period, when the capacity may be supposed more fit to receive it. Others do not give the Catechism so early as the Bible reading, because in some parts it cannot be so early understood as select portions of the latter may, and because, if reading without any sense of the thing which is read about, be, indeed, in general a senseless practice, still less to be approved is the recitation of what has been committed to the memory with much toil, and with more glaring evidence of the same absence of all intelligence. "I think," says one of the teachers here referred to, "the Shorter Catechism is less useful as an instrument of investigation, than as a formula on which to express succinctly and remember easily the results of previous study; and I, therefore, reserve it, or at least the complete study of it, until the pupil is pretty well advanced." The custom, in short, of the aided schools on this point may be summed up as follows:—In one-fourth part of their number the Catechism, learnt by rote at first, is learnt intelligently afterwards; in a fourth part it is never learnt but by rote; in one-half the intelligent method, more or less, prevails from first to last. Among the best examples of the best practice are the schools of East Kilbride, Kilmarnock academy, Alexandria, Dalmonach, Creetown, Goodhope, Terregles. In much the same proportion the Holy Scriptures are read in the inspected schools, after one fashion or the other. But in the *rational* method there are diversities of practice, some of which it may be proper to notice. In Milton-lane school, Glasgow, the method drops the interrogatory form, which so commonly marks it, leaving the pupil to relate, in his own words, without aid or interruption, all that he recollects of the given subject. His attention is thus intensified, and in the same degree his interest in the lesson is increased. The same effect takes place, and probably with some improvement, when the exercise is not extempore and oral, but deliberate and written, as at Cummertrees and Girvan. Sometimes the lesson is given out to be acquired at home, and afterwards delivered at the school, the master perceiving a peculiar advantage in allowing the pupil to feel that much of his religious knowledge has been acquired by efforts almost voluntary. A very able master describes his method in this respect as follows:—

"Our practice at Caerlaverock is, to give out four or five chapters on Wednesday, on which the pupils are to be examined on Saturday following;

and as many more on Saturday, on which they are to be examined on the Wednesday following; and the chief object in this is to induce a taste for reading the Bible at home, by the daily practice of reading a chapter in the morning and another in the evening. Thus, although the two upper divisions do not *daily* read the Scriptures in the school, we have morning and evening readings at home."

At Patrick the teacher states to his class, in a plain familiar manner, before they begin to read, what they are proceeding to read about; the effect of which is very sensibly to excite their interest in the lesson, and to strengthen the impression of it which they are to receive from the impressive language of the text. This method is not identical with the method of "*preliminary questioning,*" which is described as follows, but is evidently akin to it, and has not a little of its remarkable virtue:—

"I have elsewhere suggested to the teacher to put before his pupils, *previously* to their reading each lesson, some questions preliminary to the matter of it, requiring of them answers oral or written, the best they can think of without consulting the book. Next let them read the lesson. And afterwards let them be examined as to the portion they have learned."*

There is no respect in which the Bible lesson shows so great a diversity of practice as in the portions of the sacred volume selected for reading, with reference to the ages and the progress of the pupils. This is matter of comparatively little consequence when the Bible is read, as sometimes it is, simply as a reading lesson book; but, when religious knowledge is the object, as it ever ought to be, it is especially fit to consider the capacity of the pupil, and to adapt the lesson accordingly, "for those that begin their Bible at the wrong end commonly use their knowledge of it in a wrong way." The Scripture readings have, in some instances, been divided into several graduated sections, showing a distribution of the matter somewhat as follows:—1. Old Testament history. 2. New Testament history, with the miracles and parables. 3. Christian doctrine and Christian morals. 4. A revisal and combination of the foregoing portions. It is plain that this scheme admits of being modified; and it has been modified, as follows, by one teacher, whose study of method in this matter has been unusually careful:—

"The junior classes are restricted to a selected course of Gospel and Old Testament narrative. For the more advanced classes there are four courses. 1. Harmony of the Gospels, according to the arrangement of Robinson. 2. Bible history to time of the Jewish monarchy. 3. Acts of the Apostles, with the Epistles examined at that point of the narrative when they were written. 4. The Jewish monarchy, the historical books, and the prophets explaining each other."

At the same time, it is plain that the sections of any such

* Whately's Annot. Bacon's Essays.

scheme cannot be positively assigned to any certain ages; for, practically, that would be prevented by the inequalities which are common in respect of regular attendance, and which are so great that nothing but the pupil's capacity and progress can be the master's guide in this matter. In some schools, the division of Scripture lessons first mentioned is observed in all its parts with slight variations; in others, single parts of it are well exemplified, as in New St. Matthew's school, Glasgow, where the parables and miracles of the New Testament are taught for nine months together to the greater part of a very large school. But too often, the Bible lessons are altogether ungraduated on any principle, whether of age, progress, or capacity. In general, the instruction is best given when it is of the simplest description; that is, when the Scripture characters, or the principal events in Scripture history, are the subject. This is well,—for no part of the religious instruction is more pregnant with moral lessons, the sacred history being ever explicit in the recognition of a ruling Providence; and the study of it tutoring the eye to the perception of that same sovereign rule in other histories which are not sacred. The religious instruction of these schools is, on the whole, not inferior to the secular; it may be said, indeed, to rise above the level of the latter, more frequently than it falls below it. Moreover, it forms everywhere a very prominent part of the school business; in which respect it has, in general, that greater regard bestowed upon it which is due to its relative importance among the other subjects of instruction.

other branches of moral instructio

It remains to notice shortly some of the *indirect* methods of moral instruction.

1. Occasionally, the reading-lesson is turned to excellent account in this way, as at East Kilbride, Mearns, Kilmarnock academy, George's-street, Paisley.

2. History is taught in many of the schools, though often irregularly and incompletely, and it is seldom any other than the history of England or Scotland. The use of it appears to be, in general, pretty well understood as a moral use. This idea was often expressed by the candidates for certificate at the last examination, and as it seems to be held pretty generally by the aided teachers, a few examples taken from the examination papers may be here cited:—"A teacher can be at no loss to make history a means of cultivating morality." "He may exhibit what is termed God in history." "He may show how the worst passions of men are made to praise Him." "How good and evil generally gain their reward even in this world." And not the worst of the remarks on this subject is, that the "Union of England and Scotland illustrates the

blessing of living in harmony with our neighbours, assisting each other in every possible way;" a lesson the more gratifying, if it be true, as observed by a distinguished writer, that "History in general is an account of what men have done to make each other unhappy."

3. Natural history, which receives some attention in a very few schools; drawing, which occurs more frequently; and vocal music, not uncommon—may all be mentioned as among the subjects that contribute indirectly to moral culture.

"I have observed," says the teacher of St. Enoch's, "with considerable interest the beneficial effects of the drawing practice upon the pupils, not only as a powerful auxiliary in improving their tastes and correcting slovenly habits, but also, in many instances, as a means of deciding their future profession in life. Its influence is perceptible in a certain cleanness and seemliness of personal appearance, and a becoming propriety of manners; while all their work is characterized by a degree of neatness and good taste, which contrasts with the performances of others who have not had like advantages. The younger imitate in their manners the elder who are taught this branch, so that the tone of the whole school is elevated.

The practice and the precept to which reference has now been made, are not, however, the only modes of moral culture which the schools supply; for there remains the influence of example. It is a trite remark, that, usually the school catches the tone, manner, and much of the exterior bearing of the master. It is no less true, that it receives, through the impression of example, not a little of his inmost moral character. He loves, we may suppose, the labours of his calling, not simply as in themselves the most agreeable to him, but, as they form the appointed mode of his duty; and so much are these his ruling sentiments that in his own way he is as much "endued and native" to the school life as any young person under his charge. He is not swayed by passion, prejudice, or any feeling unapproved by reason; he shews that best description of a teacher's kindness which consists in marking well the individual characters of his pupils, and treating them accordingly. When these are the master's qualities, they are not unperceived, at least they are not unfelt, by the pupil; and theimpression of them continues long, it may be throughout life. Now, this is, to all intents, a moral education, and often more effective than any teaching expressly tendered as of that nature. It is gratifying to observe in how many of these schools it is actually taking place; in as many of them, indeed, as evince any great success in the ordinary kinds of elementary instruction.

ntellectual; As education of the *Intellectual* kind means simply the discipline of the mental faculties; and, as this discipline is always in the measure of the success with which the instruction has been imparted, the merit of the *instruction* is all that needs

here to be regarded. The examination of candidates for your Lordships' certificate embraces two subjects that are not taught in the aided schools,—Church History, which, however, may be considered as an extension of the subject of religious knowledge, —and the Gaelic language. Upon this last, I remark that, in all the schools, thirty-eight in number, attended by pupils to whom this is the spoken language, the teacher in the general conduct of his school, speaks only English. In one case, he is himself entirely ignorant of Gaelic. At the same time, in nearly all of these schools, reading in the vernacular is unpractised, and books in the vernacular unknown. To compensate these defects, translation from the unknown to the known tongue, and the converse, are practised regularly, and by many; though certainly not by all. In the general opinion of the Highland clergy, this compensation is not sufficient; and they would probably unite in recommending,—(1.) That the series of Gaelic school books prepared for the schools of the General Assembly's Education Committee should be placed on the list of those rendered easy to be had by the assistance of your Lordships' grants. (2.) That teachers of the aided schools in question should be required to possess a competent knowledge of the Gaelic tongue. (3.) That, by the time the pupil shall have reached a certain rather early stage of progress, the pupil shall have received some instruction in Gaelic reading. The effect of which, it is believed, will be to increase his profit from all the other lessons; and, in the opinion of many, to lessen the common use of the Gaelic speech, a result very generally desired by at least the Gaelic speaking population itself. The examination for certificate includes some subjects not required in the aided schools, and therefore not specified in the schedule in which the reports are made; and this, for the obvious reason, that the teacher should himself know more than he may ever be called upon to teach. Add to this that, in the Scotch elementary schools, by whatever class of children attended, the instruction is often carried beyond the elementary branches, so that if aid were available to schools only that are purely elementary, it would not reach to many which are attended by a sufficiently poor class of children. On that account, while the form of the schedule requires a report on the elementary branches only, it is plainly expected that others, when they occur, should not pass unnoticed. Among the unenjoined subjects are—(1.) The languages classical and modern; it may be said, the Latin and the French alone, for Greek has not been attempted in a tenth part of the aided schools; German and Italian in none. For the most part, the progress in Latin is inconsiderable; and the

subjects of examination for certificates;

Gaelic.

other subjects of examination;

great proportion of the pupils applying to it, who are only at the first stage of this study, shows with how many it has been dropped very early, and proved quite fruitless. Those who have proceeded further are not seldom found wanting in the most essential parts of rudimental knowledge. To this treatment, and this fate of the branch in question, there are, however, some very marked exceptions, as at Kilmarnock academy, East Kilbride, Carlaverock, Bothwell. The unenjoined or superior instruction is conducted by some teachers, unassisted, with great success. But, on the whole, a well-trained assistant is plainly indispensable, when the higher branches are taught, the elementary being now so many and so engrossing. And, as the higher will not cease to be sought in at least the parish schools, it is much to be desired that for them such assistance should be generally and by law provided. The same assistance, or rather the same considerable change in their economy, is required for some of the schools called Burgh, and for some town schools of another description; and still more required, by reason of the greater demand which exists there for instruction of the higher kinds. In such cases the school should consist of three or more divisions, each under the charge of one master, forming an academy on some such model as those of Ayr, Irvine, and Kilmarnock.* No seminary of that description exists at present in such considerable towns as Lanark, Port Glasgow, Dumbarton, Stranraer, Pollockshaws, Avondale, Castle Douglas. It remains to advert to those parts of the instruction which are purely elementary, universal in the schools, and therefore understood to be conditioned by the terms of aid. There is, perhaps, no point on which your Lordships would more desire to receive explicit information, than upon the amount of the instruction actually acquired when the pupil finally leaves the school; for in this lies the best proof of what has been effected by all the provided means of education; if it be not rather the reality of that effect itself. I have attempted, with your approval, to ascertain what the final progress was at all the schools inspected in this district during the last year; but without success, and for these reasons, that, the school registers do not afford the desired information, and it is not known, when a pupil finally leaves one school, whether he does not go to another. The attempt, however, produced a few returns which may be relied upon, of which sort are those referred to in the following statement, all of them from schools in rural situations:—

lementary ubjects of nstruction;

* Report on the state of Education in Ayrshire; Minutes of 1846.

Total attendance in the course of last year returned from twenty schools - - - - - - -	2,280
Of that amount the teachers reckon, from past experience, that the number who will leave school finally, unable to read correctly and fluently, will be - - - -	398
Untaught beyond the compound rules in arithmetic -	735
Wholly untaught in geography - - - -	743
Untaught in English grammar beyond simple parsing -	818

These facts do not evince either the inability of the teachers to carry their instructions farther, or the inability of the pupils to proceed farther on account of the expense of tuition, which never rises with the stage of progress in any individual branch; but they certainly afford no gratifying view of what many schools accomplish under ordinary circumstances; and they present, perhaps, the most striking of all the proofs of the prevailing habits of irregular and short attendance,—to which alone the limited progress must be ascribed. It is remarked that, whatever the skill or character exhibited in the teaching of English reading, with its usual accompaniments, much the same may be expected to appear in the teaching of the other elementary branches. If there be any exception to this uniformity, it is more likely to occur upon the subject of arithmetic, which, in a remarkable degree, is sometimes better and sometimes worse taught than any other branch. With this abatement, the general character of the elementary instruction may be tolerably gathered from that of the instruction in English reading; for which reason, in particular, a very few remarks upon the latter are now offered. The schedule marks three stages of English reading, under the heads of "Monosyllables," "Easy Narratives," and "General Information;" and it is plain that the stages so marked do not refer to the art of reading merely, but to all its usual accompaniments.

1. In general, the second and third stages afford a tolerable indication of how matters have been managed in the first. But there are schools in which the third stage is entirely wanting, and others in which the second shows nothing in a mature or advanced state. Such schools are well nigh of the infant class in respect of the pupil's progress, though not of the pupil's years, and they behove to be viewed and judged of accordingly; but they are few, probably not exceeding eight or ten in number. In the other schools where the whole body of the elementary instruction is developed, there are teachers that bestow the greatest care upon the first stage of it, taking that into their own hands when they might have the help of monitors, pupil-teachers, or assistants; one alleging that he finds a certain delicate diffi-

culty in the process of instructing, and in the whole course of dealing with the very youngest minds, which forbids him to commit that task to young and inexperienced tutors; another, apparently against the bent of his own inclination to be immersed in the more advanced duties of his charge, yet under a strong and honest sense of what the inferior parts of it demand of him, makes the youngest of his pupils his peculiar care, so that that portion of his school is the one which he is ever the most forward to exhibit; another takes the young ones to himself, from a sense of the great importance to their future progress of their "starting well." The same careful nurture is often seen, as might be expected, in the youngest classes of the female schools. But there remains an instance of quite another description,—it is that of a parish school, in which the highest branches are taught in the ablest manner; the master a man of strong understanding and of much liberal culture, makes the "monosyllable" class his own, and his treatment of it is a model. The lesson is thoroughly inculcated by an amusing variety of apt but never childish methods; for they are not childish even in this *labor in tenui* where they are so apt and so effective. The young thought is then stirred in a manner that must leave its result, if not its remembered impression, throughout life; and it is seen how much in skillful hands the mind may be fashioned, as well as furnished (*forgé, meublé*) by very simple exercises.

2. The period of "Easy Narratives" is generally understood to end with the reading of the Fourth Book of the Scottish School-book Association; that is, after there has been some practice in reading with attention to the sense; and when that manner of reading may be expected to be distinctly exemplified. The exercises proper to this period are, in verbal meanings, in answering the master's questions upon the matter of the lesson, in taking any offered illustrations from objects, maps, models, or pictures. The interrogatory method here referred to is entirely wanting in some schools; and it might as well be wanting in a few more, where it is feebly or foolishly practised. A single instance may suffice. The custom of demanding or giving verbal meanings sometimes goes too far; it is, indeed, at times managed in a very clumsy manner: for almost every word occurring in the lesson must have its equivalent,—one or more,—and such equivalents, such rude equivalents, are accepted that the obvious effect of the whole lesson is not to descriminate, but to destroy, all shades of difference in the sense; not to instruct in verbal knowledge but to disturb and to undo much of the knowledge of that sort which had already come untaught.

3. The "General Information," which describes the object of the third stage of the reading lesson, has been reported as "moderately or imperfectly" given in not many of the 201 schools; but this has reference simply to the success with which the information contained in the lesson seems to have been imparted, and not to certain accompaniments proper to this stage. As respects mere reading, some display of emphasis and expression might now be expected upon select passages; but this is an accomplishment seldom attained, seemingly not well appreciated, and seldom very earnestly sought after. The usual accompaniments are—1. Slate-writing to dictation, which is now universal in these schools. 2. Oral accounts of the substance of the lesson without the aid of questions. 3. Written abstracts of the lesson or paraphrases of shorter passages. 4. Essays or letters upon given subjects. The three exercises last-named are not found in more than an eighth or tenth part of the inspected schools; they are given, not so much for any knowledge to be gained in that manner, as for the occasions which they furnish of intellectual exercise; and here again, it is seen how much of an excellent culture it is possible to impart by a varied and skilful use simply of the reading lesson. Withal, it is plain that the reading lesson, at this advanced stage, remains imperfect unless accompanied with some instruction in grammar. This branch is commonly kept distinct, but not always. It is commenced upon the reading lesson, and carried far before recourse is had to any grammar text-book, in a few of the best-conducted of these schools,—according to that method which takes up and examines the example, long before having anything to do with the rule. A practice, the opposite of this in extreme, occurs in not a few instances where the rule continues to be everything throughout the grammar course, and its application to any text out of the grammar-book is unknown,—a method very obviously imperfect.

The appended summary of Tabulated Reports shows the estimate that has been formed of the success of the instruction in each of the elementary branches. And, from the Tabulated Reports themselves, it may be seen that not many of the aided schools can be mentioned otherwise than in approving terms, and that not a few exhibit merits of a very high order. All this consists with the fact that, in very many, there is still room for improvement; for that point of excellence is very distant beyond which the work of education, even when confined to the school-room, cannot be desired to advance.

Deficiency in means of education.

IV.—It has been already observed that the grants administered by your Lordships towards annual aid have been applied mainly to the keeping up and the improvement of schools already existing,—from which it may be inferred that the means of education have been, before, extensively provided throughout the country. This is true. The origination of schools has been in a very great measure anticipated,—so that the Report of the Census of 1851, "making a fair allowance for deficient returns," announces it as "probable that about 14 per cent., or 1 in 7 of the people of Scotland, are at school." The number of schools that may be supposed, from that ratio, to be still wanting, is at the same time somewhat reduced by the known fact of the many children "belonging to" no school, for whom there are schools convenient, and open, if only they chose to take advantage of them. This pervading supply of educational means has been gradually produced; and one thing that has sensibly helped its progress may be remarked. The Education Committee of the Church of Scotland observe, "How much their schools have contributed to the education of the country, by the unusual number of young men they prepare and send out to pursue the occupation of teachers."* The same thing might be said of the parish schools, the influence of which in that way has been far more considerable, as well as of much longer duration. Boys from a humble condition in life have been so instructed there, that they naturally sought employment as schoolmasters, finding no use for the knowledge they had acquired in any other open path; and thus schools came to be much multiplied by their ambition or their necessities, joined, of course, with a general care for education on the part of the community; but this result came from the State institution of the parish schools, and may it not be hoped that in the parallel case of public aid given for *improvement* of the schools, their improvement will follow upon a corresponding scale. Such being the extent of the existing provisions for education, private bequests have been commonly directed of late, not to the origination but to the better support and the improvement of existing schools; of which sort are the Dick, Milne, and mainly the Bell bequests. To these may be added another of great and perhaps unequalled importance,—affecting chiefly the Western counties in which the schools now under review are situate. The late John Ferguson, Esq., of Cairnbrock, by trust disposition and settlement, dated 13 May 1833 and 22 September 1855, bequeathed the residue of his

* Report of General Assembly's Education Committee for 1843.

estate "for the maintenance and promotion of religious ordinances, and education and missionary operations, in the first instance, in the county of Ayr, stewartry of Kirkcudbright, and counties of Wigtown, Lanark, Renfrew, and Dumbarton, and thereafter, if my trustees in Great Britain shall think fit, in any other counties in Scotland." The "application and appropriation of the trust funds is declared to be entirely at the option and discretion of the quorum of my trustees as to the preparations thereof to be applied to the said several objects." The same settlement contains several special bequests. 1. "1,000*l.* to be invested in security for the purposes of secular and religious instruction of the youth in the burgh of Irvine." 2. "50,000*l.*, or the produce thereof, to such charitable, educational, and benevolent societies and institutions in Scotland as my trustees shall select." And 3. "10,000*l.*, or the produce thereof, to such Ragged or Industrial schools in Scotland as my trustees shall select." The appropriation of these bequests is expected to take place in the course of the ensuing year. It is true that bequests are sometimes made for the establishment of new schools, and they occur for those places chiefly where they are most wanted, for the large towns,—though there they are commonly destined to the maintenance as much as to the instruction of poor children. Of this sort one is too important to pass unnoticed, though the provision for maintenance seems to be of a limited description, The late James Alexander, Esq., thread manufacturer in Glasgow, bequeathed the residue of his estate for the purpose of "founding and endowing an hospital or schools in Glasgow for clothing and educating of poor male and female children, and fitting them for useful employments upon the same system, rules, and regulations as acted upon by the society in Glasgow called the Highland society." "The perpetual governors are to be the Lord Provost and bailies of Glasgow, and the ministers of the High Church parish, St. John's parish, and the College or Greyfriars parish, Mr. Alexander's trustees being joint governors during their lives." This bequest will afford a net income of about 1,200*l.* a year, which will be augmented by 400*l.* a year, when certain "annuities fall in;" and steps have now been taken for the erection of a suitable school fabric. Besides the great number of schools already existing, other reasons seem to determine private bequests more towards the aid of schools, than towards their origination. The existence of a well-attended school in any place gives assurance that a school is there needed, and an unaided school, unless in very favourable circumstances, is in Scotland presumed to require aid,—if only because all the parish schools have been

aided; and, so it is, that private bequests so often take the same direction as the administration of the Parliamentary grants. This last form of aid remains unextended, as yet, to nearly three-fourths of all the schools in special connexion with the Church of Scotland; and, as already said, to the whole class of adventure schools, about 1,500 in number. After all, it is certain that the room for originating new schools would be very great if those that inadequately serve their purpose were removed. But, apart from this, and looking merely to the number and position of the existing schools, it would seem that more are required in not a few parts of this district. This may be presumed of certain of the large towns, where the school-endowments are unusually few in proportion to the amount and the wants of the population, but the defect occurs also occasionally in country parishes of the Lowlands,—and far more frequently in the Highlands, where considerable groups of the population are represented as having no means of education within their reach. The following statement is compiled from returns supplied by the parish ministers for five of the parishes in Skye:—

Number of schools required at places where they would interfere with no other school - - - -	8
Number of pupils who would attend such schools - -	385

It is believed that reports of much the same tenor might be had from other large districts of the Highlands. The remedies that may be suggested, distinct from any statutory provision, are—1. That the Church or other Bodies which have long had in their own hands almost the entire care of education in the Highlands, should extend their aid as well as their influence to the exertion of school buildings; hitherto, no aid, or very little, has been supplied in that way to school-building in Scotland. 2. The local circumstances of the Highland districts may, perhaps, warrant a larger rate than usual of assistance in school building, from the Parliamentary grants. 3. And, for the same reason, many schools erected there seem to present a stronger claim than usual, to be considered as self-supporting,—that is, where they solicit aid, to be exempted from the condition of voluntary subscription, or to have it applied in their case with some mitigation.

I have the honor to be, &c.

JOHN GORDON.

To the Right Honorable
The Lords of the Committee of Council on Education.

Appendix.

Summaries of Tabulated Reports, for 1855–6, on Schools inspected by J. Gordon, Esq.

* The number of Schools inspected during the year was 201; but from 8 of these no sufficient returns of income and expenditure have been received.

† Exclusive of Government grants.

GENERAL REPORT, *for the Year* 1856, *on the Schools in* SCOTLAND, not *connected with the* ESTABLISHED CHURCH, *inspected by Her Majesty's Inspector of Schools,* JAMES CUMMING, Esq., LL.D., *and by Her Majesty's Assistant Inspector of Schools,* CHARLES E. WILSON, Esq., M.A.

MY LORDS,

THE Report which I have now the honor of submitting presents a considerable increase as compared with former years, both of schools inspected and of scholars in attendance. I have myself visited 162 institutions, containing on the days of inspection 18,710 pupils, and Mr. Wilson has visited 185, with 17,952 pupils, making in all 347 institutions, or 404 schools, with 36,662 scholars.

The great majority of the schools which we have inspected are under the care of certificated teachers, and almost the whole of them are receiving annual grants, either in the form of augmentation to the masters or stipend to the apprentices, or both. The schools in our large towns are in general so numerously attended, and those in the rural districts are so scattered, my journeys extending from the Orkneys to the Mull of Galloway, and from the Western Hebrides to the borders of Northumberland, that I can seldom inspect more than one school in a day. I am thus, in a great measure, precluded from visiting schools which I have been invited to inspect, and which, in other circumstances, I would have been glad to examine.

There are few schools now where the registers are not kept sufficiently well to stand the test to which I am accustomed to subject them, of showing what pupils are present or absent on any given day. In many instances, summaries of the daily and weekly attendance are made. There are still defects, however, which it would be desirable to have corrected. They are seldom provided by the managers in such a permanent form as to secure their preservation for use and reference in future years, and they seldom include a record by means of which pupils might be identified, and their progress in subsequent times might be traced. Some of these defects are the more likely to be rectified, as every new teacher experiences the difficulty and inconvenience of making up the lists of those who have been three or four years in school; and as the managers, who on this subject depend much on the teacher, feel themselves unable to make the statements required of them.

In stating the highest and lowest numbers of those who have attended during the year, a difficulty has sometimes been mentioned in regard to the lowest weekly average. This, if the term be strictly used, is always identical with the average attendance in the first week after the vacation; for the schools generally open with a very small number, a number which is of little value as an index of the ordinary attendance, and is so much the smaller if the teacher is so zealous as to take in an additional week for work from the end of the holidays. Perhaps it might be fair to employ the terms, not so much in their literal meaning as in the mathematical sense of *Maxima* and *Minima;* according to which the maximum or minimum number is that which is greater or less than those on either side of it. Thus, a school may open with an attendance of ten pupils in the first week, which may rise to thirty in the second week, and fifty in the third. If the number in the fourth week should be forty-five, and that in the fifth week sixty, then forty-five might be considered the lowest average, unless there should be a smaller attendance in any subsequent week. The number ten of the initial week is of little importance in itself, though it may be properly allowed its due influence in determining the average weekly attendance during the year.

In my last report I had occasion to advert, though only hypothetically, to the case of masters leaving their schools to attend the classes of the University. The case had been brought under my notice by the application of a teacher who proposed to take this course, and the experience of the trustees of the Dick bequest, to which I referred, showed that the case deserved serious consideration, and a distinct decision. Before my report was published an instance actually occurred, and in due time came incidentally to my knowledge, in which the charge of the school and the apprentices was transferred by the master, with the consent of the managers, to a temporary substitute, in order that he might improve himself by attendance on some college classes. When the matter was brought under the notice of your Lordships, the master was considered as having deserted his duty, and was deprived both of his augmentation and his gratuity on account of the pupil-teachers. The case calls for some further observations on account of the defence set up by the managers of the school, who seemed to state that the practice was not only common in the history of the parish schools, but had occurred in other instances in connexion with the Committee of Council. When called upon to specify the instances, they, naturally enough, declined to become informers against others when the practice was treated

as an offence. I am not myself aware of any instance of the kind referred to, nor do I know whether the managers had in view any of those schools which are under my inspection. But the nature of the case, and the decision of the Committee of Council upon it, may require some further explanation. The clergy of the Presbyterian churches of Scotland, as well as of the other religious bodies, have, to a large extent, been drawn from a class of limited patrimonial means, and during the long course of philosophical and theological study prescribed to them, many of them are engaged in the work of tuition, either in private families or in schools. For the sake of the latter class, the theological lectures in one ecclesiastical body are given only during a short session, at the time when the schools over the country are closed for the vacation ; and, in other bodies, the master has been often allowed to serve by substitute during the college session, and the arrangement has been vindicated by the plea, that a higher class of teachers, and one for whose general deportment there was an additional security, was thus obtained; for the master's connexion with the school often continues after his theological studies at college have been completed. This arrangement has taken place so frequently, especially in the north of Scotland, that I do not wonder that it has not been considered as affecting the regular organization and equipment of the school, or that the managers at the end of the year have felt themselves entitled to certify that the master has done his duty to the school.* The inconveniences have, nevertheless, been felt in the relaxation of order and discipline, and the defects of instruction, which are likely to occur under *any* temporary substitute,—and especially a substitute of inferior qualifications. And those disadvantages are likely to strike more powerfully the minds of those who look simply to the interests of the school, and the benefits which it is designed and may be made to confer on the community, without being called upon to pay regard to the ulterior objects of the teacher. This is very apparent from the restrictions and penalties imposed on such arrangements by the parties to whom I have so often referred, the trustees of the Dick bequest.† I understand the view of the subject taken by your Lordships to be, that the augmentation and gratuities given to the schoolmaster are considered as

* Since this was written, I have observed a passage, which I regret that I had overlooked before, in the Report of my colleague, Dr. Woodford, in which the practice is noticed under somewhat different circumstances, and with some important observations. Minutes of 1855–6, pp. 660, 661.

† Report on the Dick bequest for elevating the character and position of the parachial schools and schoolmasters in the counties of Aberdeen, Banff, and Moray, 1854. *See* .particularly, p. 119.

remuneration for services to the pupils and pupil-teachers undertaken by him, and *certified* to have been rendered by him *personally*, and that the duty thus undertaken is one which neither he nor the managers are entitled to devolve on a substitute.

In regard to the instruction in the various schools, I have not much to state in addition to the observations contained in former reports. Some of the faults which I formerly noted seem to be considerably abated. The monotonous reading, in particular, less frequently distresses the ear. The history of Great Britain forms a subject of instruction in an increasing number, I should think, a great majority, of our schools. In this subject, however, as in geography, the progress in different schools is very different. In some, the geographical knowledge is nearly confined to the map of Scotland or Great Britain; in others, it extends to the leading features of the various quarters of the globe; in others, still more advanced, there is a considerable knowledge of the minuter topography of Continental Europe, and of the principles of physical geography. In history we seldom mee with anything beyond the leading events and dates of English or Scottish or of Scripture history. It might be desirable, and not very difficult, to connect these with such an idea as a chart could afford of the great events in the world's general history, just as in geography, the idea of our own island is not complete unless its magnitude and position are understood with reference to other parts of the world. I assume that the knowledge of history acquired in a common school cannot be very extensive or minute. But while the illustration of Scripture leads naturally to a view of the principal powers of ancient times, Egypt and what are called the four empires, a similar view of modern times might be afforded, in which the portions of narrative opened up in the school, or those to which the inclinations and opportunities of the pupil might afterwards give him access, should fall into their proper place, and be happily combined.* It may be considered as one of the maxims of modern instruction that what is read and learned should also be understood by the pupils; and the reading is unsuitable, if the subject be beyond, not what he understands, but, what the pupil can be made without much difficulty to understand. The process of explanation, however, is often very imperfectly accomplished by defining the meaning of

* A chart of ancient history, by Dr. Forbes, the Governor of Donaldson's Hospital, has been published by W. and A. K. Johnston, Edinburgh, accompanied by a small explanatory hand-book.

individual words; sometimes by means of terms more difficult and uncommon than those which they are intended to explain. There are some school books formed on this principle, giving lists of *meanings*, as they are called, which the children have to get by heart. These may occasionally be useful when the interpretation of the single word is made to throw light on the import of the sentence in which it is found. But, when the interpretation consists only in the substitution of one synonymous term for another as unintelligible as itself, no progress is made in enlarging the mind of the pupil. If a child reads such a line as—

"Darkness overspreads us here,"

it may be made to understand how *darkness* conveys the notions of ignorance, perplexity, danger, with anxious fears and sadness of heart. But if, instead of this, it be merely taught to say that *darkness* means *obscurity*, and this is scarcely an exaggerated instance of some of the meanings referred to, it is plain that all that it has acquired is some notion of the import of the word obscurity, without the slightest help in comprehending the original clause.

In many of our schools instruction in Latin, and in some of them, in Greek, is given to the more advanced scholars. I am, perhaps, scarcely entitled to give a general opinion as to the success of the masters in this department, for I have frequently found my time so completely occupied with the examination in the elementary branches, together with that of the pupil-teachers, that I have had to decline taking the classics in hand. Judging, however, from those which I have examined, I should say, that while there are a few good schools where the instruction is both accurate and extensive, as might be anticipated from the known attainments of the teachers, there are not a few where it must be considered unsatisfactory. When the lessons have gone beyond the mere rudiments of the language and the simplest combinations of words, they have been too frequently the repetition of a free translation of such an author as Cæsar, where clause was given for clause without a clear perception of the force of individual words, or of their relation to each other. This want of accurate construing and analysis, by which alone the ground that is gone over can be secured, and the farther progress of the pupil facilitated, deprives the instruction in this department of much of its value. And yet, even in this case, considerable advantage is derived, in regard to English etymology, from the acquisition of Latin vocables, with their declensions and conjugations; and some light is thrown on English grammar by a comparison with the rules for the Latin. A habit of more exact analysis would accustom

the pupil to greater precision of thought, and would give him greater expertness in handling a new passage. The exercise should begin from almost the very commencement of his studies, by showing him the use of the various cases of nouns in simple sentences, and exercising him in the formation of such sentences while he is studying the declensions. The plan will be continued somewhat later by *varying* the sentences which he begins to translate. In fact, he should be taught, in Latin as well as in English, to treat language as the vehicle of thought. From the examinations of the students, to which I have listened in the normal schools, I am confident that many of our teachers are perfectly well qualified to afford the instruction in this intellectual way; and from the relation which our elementary schools bear to the Universities, and the functions which the masters in the former exercise in training and preparing students for the latter, it is very desirable that the object should be kept in view.

Some progress has been made in drawing, though the attainments generally are only moderate. About twenty pupil-teachers, from fourteen different scools, have obtained Government prizes during the past year (January to December 1856). This is about a fifth of the whole number whose drawings were submitted.

The most interesting addition to my labours during the past year, has been the inspection of reformatory schools. I have visited several of them; but the only one inspected within the period to which this report relates, was that which embraces the two Houses of Refuge in Glasgow. The boys' house is under the direction of a governor, who takes so much interest in his charge, and seems so well qualified for it by natural talent and experience, that I had much pleasure in observing the results of his management, and could not but entertain a cheering hope that the institution would, with the Divine blessing, be the means of rescuing many from a life of crime and wretchedness, and forming them to be useful members of society. In observing, conversing with, and examining the youths in such a school, one is struck with the diversity of appearance and manner among them. The ungainly aspect of some is contrasted with the open and intelligent appearance of others. And, without entering into the nice and difficult question of hereditary tendencies and education, or regarding any of them without compassion, one cannot help feeling that a large proportion of them are the victims of unfortunate circumstances; that, whatever guilt may attach to those by whom they were trained in childhood, their position may be traced to the ordinary defects of fallen

human nature, operating in circumstances which have given them a criminal direction, and that, in other circumstances, and under better and happier influences, they might have been placed on the level of ordinary society. This strikes one particularly in the female house, where the older class of girls are treated and trusted like members of respectable families, and seem to deserve this treatment and confidence.

The schools under inspection may be divided into four or five classes in reference to the position and character of the scholars.

Excluding those seminaries which are designed for the higher education of the wealthier classes, we have, first, the common elementary school, attended by the children of the working classes, who pay fees of 2*d.* or 4*d.* a-week. Though in some of them there are pupils engaged in higher studies, still even in the best of them the education is substantially elementary. If there be at one extremity a division composed of those who pay a higher fee, there is at the other an infant department, where the fee is lower than the average. In this class, much the largest one of the schools with which I have to do, there is considerable variety; but they may all be regarded as schools where a working man may command a sound education for his children at a moderate expense.

We have, secondly, what have been called mission schools, being generally originated from religious motives, with the view of reclaiming the children of those who were dropping out of the pale of the Christian church and the habits of Christianized society. In these, a fee of about 1*d.* a-week is taken, rather than exacted. The education is generally more limited. Natural tact and the influence of personal character are looked to in the selection of a teacher, rather than acquired skill or high intellectual attainments. The parents are not supposed to belong to the criminal or abandoned class,—at least they are not recognized as such,—though there may be much of that vice among them which generally accompanies poverty, either as its cause or its effect. Schools of this kind may be seen in the Wellgate, Dundee; in Castle Street, Montrose; in the Wynds of Glasgow, and in others of our large towns, working with good practical effect and benefit, not only to the pupils, but to the community.

After these we have the industrial or ragged schools, designed not for convicts, but for poor vagrants who are living on or within the borders of the criminal class. Instead of paying fees, they are induced to accept a gratuitous education by the prospect of food or clothing, or as the alternative of being convicted and sent to prison for petty offences.

Fourthly, there are the reformatories, intended mainly or exclusively for convicts, in hope of reclaiming them before vice and crime have hardened into habits.

It is the schools of the second of these classes which receive least public aid, and yet seem to be, on public grounds, not the least deserving of it. The parents are so poor, or so indifferent to the education of their children, that the fees are trifling in amount. In many cases, indeed, it is only by personal solicitation and canvassing on the part of the clergy and those who are associated with them, that the children can be got to come on any terms; and unless a large sum be raised by voluntary contributions, the aid of the Committee of Council is not available. The conditions may be fulfilled in a wealthy city like Glasgow, or where the school is connected with a rich congregation; but, in general, it must be expected that the school will go on imperfectly furnished, under an ill-remunerated teacher, very probably a man of more than ordinary worth so far as personal character is concerned, a laborious, benevolent, self-sacrificing man, but deficient in those professional qualifications which would make him eligible for a more lucrative situation. The plain education and Bible lessons given by such a man may, indeed, be of incalculable value; but they would not be less valuable if he were qualified to give, with greater skill, a more ample instruction; and his pupils are deserving of the most anxious attention from Government. They are poor, and though not criminal, they are living on the borders which divide the criminal from the decent classes, and it is from their ranks that the criminal class is chiefly recruited. To keep them from sinking, and to help them to rise out of the region where they are, is an honourable object. At the same time there is a difficulty connected with the treatment of the case. I do not think it desirable to have pauper schools where the scholars are treated as a distinct class from those who are only a little less poor than themselves, and into which there might be a tendency to bring down others who could and should pay a moderate fee. In rural districts and small towns, where the class referred to do not form a large mass of the population, it seems better that means should be found by individuals or local parties to procure their admission into the common school. But in those towns where there are masses of poor children, of whom it can be certified that they attend no school, and neither will nor can pay the moderate fee exacted in the common school, perhaps some plan might be devised to enable the promoters of the mission school to secure the benefit of a certificated master without making up the sum which the managers of

other schools derive from the school pence. Some plan might even be adopted, like that which is at present tried in Arbroath, for enabling the more proficient scholars in such schools to have access gratuitously to schools of a higher class, and to introduce an action bearing upwards among a class whose natural tendency is to sink still lower than they are.

Normal Colleges.

I am happy to state that the normal colleges, both in Edinburgh and Glasgow, continue to be conducted in a vigorous and efficient manner. In both the graduated instruction of the first and second year students is adopted, and the appointment to lectureships of gentlemen who formerly gave their service, wholly or partially, to the practising department, has facilitated the labours of the rectors, while it has rendered necessary some alterations in the staff of the practising schools. In some respects, however, it may be right to report on the institutions separately.

Edinburgh.

Considerable alterations and improvements have been made here during the past year. A new building has been erected, containing three class-rooms, constructed and furnished according to the most approved models, which not only afford additional facilities for the instruction of an increasing number of pupils, but give greater scope for the exercise of the students. At the same time provision has been made in the immediate vicinity for the board and lodging of a number of female students. Excellent apparatus, to the value of 150*l.*, has, by the liberality of your Lordships, been procured, and has been of the greatest value to the lecturer on physical science. I have listened with much pleasure to the lectures of the talented rector, of the gentlemen who are recognized as lecturers, and the other instructors of the students. In regard to the practice of teaching, these students have both judicious counsels and good example. On one point alone I am not prepared to express a decided opinion, as I am certainly not entitled to express an unfavourable one; I mean in regard to lectures on method and school management. It is obvious, that a student may be thoroughly drilled in the mode of teaching a class, while he may find himself in a very helpless state if set to classify a hundred children of different ages to whom he is a stranger, and to manage their education in an orderly way. I cannot imagine that so obvious and important a matter is overlooked or lightly treated; indeed, I know that it is not overlooked, for provision is made for it in the time-

table, and if treated at all, I am sure it will be treated ably; but I have not yet had an opportunity of judging of the instructions.

Glasgow.

Here, also, by the appointment of lecturers, and a grant to the same amount as in Edinburgh for apparatus, additional provision has been made for the training of the students, and the institution may be considered as well organized, and in excellent working order. The students are formed generally into four divisions, as male and female, senior and junior, and the instruction thus imparted in four classes of moderate dimensions. But it has been suggested that a farther improvement might be made, if a graduated course were prescribed for the female students, corresponding with that for the males, that, so far as the course of study for both was the same, they might receive instruction together. New arrangements have been made for the further cultivation of music, and practice in drawing; and it may be mentioned, as an indication of the progress made in the latter department, both here and in Edinburgh, that more than twenty of the students in each school obtained prizes during the last year. The character of the practising school is now so well established, that notwithstanding the very extensive accommodation, numbers of children have to be refused admission.

I have only further to present, in a tabular form, the numbers of those who were examined for certificates of merit, and of those who obtained a place in each class:—

STUDENTS.

	Candidates.	Class 1.	Class 2.	Class 3.	Total, classified.
In Edinburgh:					
Males, 3rd year	3	0	0	0	0
„ 2nd year	30	8	10	9	27
„ 1st year	33	6	18	5	29
Females, 2nd year	13	10	3	–	13
„ 1st year	34	9	6	11	26
	113	33	37	25	95
In Glasgow:					
Males, 2nd year	23	4	7	10	21
„ 1st year	30	3	11	9	23
Females, 2nd year	10	2	7	1	10
„ 1st year	26	1	14	5	20
	89	10	39	25	74
Totals	202	43	76	50	169

TEACHERS.

Male	32	–	1	15	16
Female	6	–	–	3	3
	–	–	1	18	19

Last year the line corresponding with the last in the table of students had the numbers:—Candidates, 168; first class, 27; second class, 57; third class, 51; total classified, 135; from which it may be observed, that the considerable increase which has taken place is chiefly in the higher classes. This year, besides those mentioned above, there were 9 students in Edinburgh, and 8 in Glasgow, who were placed in the Schedule provided by the Minute of 2 June 1856; and, in addition to the teachers who passed the examination for certificates of merit, three were registered as qualified for the instruction of pupil-teachers.

I have the honor to be, &c.
JAMES CUMMING.

To the Right Honorable
The Lords of the Committee of Council on Education.

APPENDIX.

SUMMARIES OF TABULATED REPORTS, FOR 1855–6, ON SCHOOLS INSPECTED BY J. CUMMING, ESQ., AND C. E. WILSON, ESQ.

General Report, *for the Year* 1856, *by Her Majesty's Inspector of Schools, the* Rev. Thomas Wilkinson, A.M., &c., *on the* Episcopal Church Schools *inspected by him in* Scotland.

My Lords, January 1857.

I have the honor to lay before your Lordships my fourth General Report on the Episcopal Church Schools under inspection in Scotland. The period of time over which this report extends is ten months and a half, *i. e.*, from the 10th of October 1855 to the 29th of August 1856.

Extent of district.

The district assigned to me by your Lordships consists of twenty-three counties, comprising the entire extent of the country, excepting Orkneys, North Hebrides, Caithness, Sutherland in the north, Haddington and Berwick in the east, and Dumfries, Kirkcudbright, and Wigtown in the south.

Its disadvantages.

The schools which I visit lie, for the most part, at considerable distances from one another, and much of my time is necessarily, but unprofitably, occupied in journeys between them. This dispersion of the schools is disadvantageous in another point of view, inasmuch as it prevents me, in ordinary cases, from assembling the pupil-teachers of more than two or three schools for examination at any one time and place; and thus the superintendence of the exercises of eight or ten, and sometimes even of two or three, young people consumes as many hours as would suffice for the examination of fifty or sixty in a more compact district.

Schools visited.

I have been enabled, during a period of somewhat less than eleven months (besides executing some special commissions, and in addition to the ordinary attendance at the June examination in Edinburgh for certificates of merit, followed by the task of revising the whole of the candidates' papers), to visit and report upon 105 schools, forming parts of 85 distinct establishments. Of this number, 12 are schools for boys, 16 for girls, 7 for infants, and 70 are mixed schools; 23 are not recipients of any form of annual aid; 5 receive grants in augmentation of their teachers' salaries without having paid apprentices, and the remaining 77 have fully adopted the pupil-teacher system. At the close of the inspectorial year these schools contained 120 pupil-teachers, of whom about three-fifths were males and two-fifths females. There were, in charge of these schools, at the same date, 62 certificated teachers, numerically in the proportion of the male and female

pupil-teachers. The last year exhibits an increase of schools of about four per cent., of certificated teachers of eleven and half per cent., and of pupil-teachers of nine per cent. The prevailing impression left upon my mind by the schools which I have inspected is one of hopefulness for the future, and trust in the progress of sound education. The patrons of the schools which I visit seem generally to be engaged in the work by a real love for it, or by a conviction of its paramount importance. It need scarcely be said, that from such persons the Inspector receives every possible assistance. He is met by them as a friend, who has exactly the same chief objectin view as themselves, and who comes to consult with and advise them as to the steps by which experience has shown that their common aim may most surely be attained. In my own case, the cordial welcome with which I have been greeted in every part of my district, and the kind attention with which every suggestion has been considered, call for my sincere acknowledgments. In endeavouring to do justice to the motives of school managers in general, I would not, however, be understood to represent the result of their labours as invariably satisfactory, or the state of their schools as all that could be desired. The management of a school is not so easy a task as it may at first sight appear, especially when it devolves upon people who have had but little opportunity of becoming acquainted with its difficulties; thence it is that many schools fail to do justice to the pains and expenditure bestowed upon them, and many well meant efforts end in disappointment. In many schools under my inspection no want has struck me as being more urgent than that of an active and enlightened managing body, composed of individuals having leisure to ensure the constant visitation of the school, as well as experience to appreciate what they see there, and with whom the clergyman could not only cordially co-operate, but on whom also the teacher could rely for encouragement, support, or direction in difficult circumstances, and for advice and sympathy at all times. The value of such superintendence can hardly be estimated, especially in a girls' school; in my district it is not common, either in boys' or in girls' schools, though more usual in the latter than in the former. If I might venture, therefore, to urge upon the attention of school committees one duty as being more imperative than almost any other, especially where the teachers are young and inexperienced, it would be the duty of providing for the exercise of a constant, kind, intelligent, and watchful superintendence over their schools.

I have spoken of the state of the schools which I have examined as affording ground of hope for the future, rather than of satisfaction with the past, from no disposition to

State of transition.

undervalue bygone efforts, but because I am persuaded, in common, I believe, with all who are practically acquainted with elementary schools, that the art of conducting such schools with the best possible effect is very far from having reached the utmost development of which it is capable. No one, indeed, appears to be more conscious of this than the managers and teachers of the schools with which I am acquainted. Nearly every school of every class throughout my district is in a state of transition with respect to its methods and organization, and it has been my constant experience to be called upon to suggest the best substitute for some old and unsatisfactory arrangement. This has arisen, in a great measure, from the very recent connexion of Scottish Episcopal schools with the Committee of Council on Education, and from the adoption of the pupil-teacher system.

Early age for leaving school.

The early age at which children are taken from school to work is universally complained of by those who are interested in the progress of education, and it appears to be the general impression that this mischief is on the increase. It is aggravated by every fresh demand for juvenile labour, and seems likely to grow with the material prosperity of the country, until parents in general become sufficiently enlightened to purchase education for their children at the cost of some present sacrifice. Meanwhile, the only practicable remedy will be found in earnest endeavours to commence education at an earlier age than heretofore, and to continue it after the day school has been forsaken; in other words, the evil must be met by multiplying infant schools and evening classes.

Infant schools.

The infant schools upon my list form about one-fourteenth of the whole number visited during the year, and I regret to find many otherwise admirable educational establishments still wanting this important accompaniment. It seems as difficult to account for the apathy existing on this subject as it would be to over-estimate the value of infant schools in the case of children who are destined to complete their school education, and to enter upon the labour of their lives at the early age of ten or eleven, or the beneficial influence of such institutions upon the juvenile schools with which they are connected, and to which they send their inmates as fast as they outgrow their infant minority. I am convinced that no educational truth can be better established than this, that if we wish to have a first-rate juvenile school, we must begin by securing a good infant school. The best infant schools under my inspection are those of St. James', and Trinity, Edinburgh, and of St. John's, Jedburgh.

Evening schools.

There are but three evening schools under inspection in my district. Only one of these, St. John's, Edinburgh, has derived

any benefit from the Parliamentary grant. Hitherto it has been found impracticable to make arrangements comformable to the conditions which your Lordships require to be fulfilled, in order that such institutions may become recipients of annual grants. All the three evening schools which I inspect are in satisfactory working order.

Subjects of instruction

It will not be necessary to attempt any scientific arrangement of the subjects taught in primary schools; it will suffice to notice the various elementary subjects in the order in which they are found in our official forms.

Scriptural knowledge.

I am happy in recording that a marked improvement has taken place within the last three years, in so far as regards an intelligent reading of the Bible, and the retention of its substance. While, however, so satisfactory an advance has been made intellectually in Bible instruction, it would be rash to conclude that the true design of all Bible instruction has been generally attained. In order to accomplish that, the Bible must be taught in such a manner as to affect the heart, and impress the conscience, to give to Gospel truth a fixed place in the pupil's mind, and a practical bearing on his character. In some instances I have observed a deficiency of solemnity in the Scriptural department, and it has seemed to me to result from or to be connected with this, that, the memory alone was cultivated. On the other hand, I record, with pleasure, that in several schools the Scripture lesson has been given with great propriety and seriousness.

Reading and spelling.

I am still unable to report very favourably of the reading and spelling. These are, in several instances, not taught with the care and pains they deserve: punctuation seems, in most schools, to be lost sight of altogether, and shows that there is no knowledge of its principles as connected with the structure of a sentence, which is in the slightest degree involved. The use of some of the points seems to be unknown. With pupil-teachers, and even with those who have undertaken the charge of them, I have detected, occasionally, very serious shortcomings. Punctuation is included in dictation; and this latter has very properly superseded the old plan of spelling by word of mouth.

Writing.

In the art of penmanship, a large number of the schools under my inspection not only equal, but surpass sometimes those of higher pretensions, and, on the whole, I have observed a great advance in this very important branch of elementary education.

Arithmetic

Arithmetic is a branch of instruction valued by the parents of the children, and therefore by their teachers. In most of the schools, and in some indifferent ones, it is cultivated with considerable success, especially in boys' schools. I seldom found that the scholars understood the processes of the first four rules,

—I mean the elder scholars; for I am far from thinking that the reasons of the rules ought to be, in all cases, taught to young children with the rules themselves. The reverse order seems, in general, the proper one; first, to ensure a familiarity with numbers, the symbols for them, and the mode of dealing with them, and then to discuss the reasons for the familiarized operations. A teacher of knowledge and tact will, however, from the first make his instructions in a suitable manner intelligent.

Some attention has been paid to mental calculation in most of the better class of schools; but it is rarely carried beyond a few hackneyed rules, or practised in such a manner as to call forth and exercise the faculties to any very good purpose.

Geography. In many schools the instruction in geography is successfully given, to the extent of the most needful portions of descriptive geography. It is not, however, unusual to find a tolerably accurate acquaintance with some less important portions of the subject, such as details respecting continental nations, while far more useful portions, such, for example, as the mining districts of England, its seaports, its means of internal communication, or the colonies of the British empire, were comparatively neglected. It is rare to find much acquaintance with astronomical or physical geography.

History. History generally is imperfectly known. In most of the schools Scripture history is tolerably well got up; in a few good schools the history of England is fairly well known.

Grammar. In most schools the progress made in grammar does not exceed an imperfect acquaintance with the parts of speech. It is too much taught by making the children repeat by rote long definitions and rules which they do not understand, and enumerate grammatical names and terms. In some schools, however, a very creditable knowledge of the chief rules of syntax is attained. Etymology is not generally taught; when done properly it is highly instructive, and leads to many a useful collateral lesson on words, and the objects for which they stand.

Music. In our schools the state of musical education is exceedingly defective. In the great majority of schools of all classes singing is either taught very imperfectly, or is not taught at all as a part of the regular instruction. In ordinary cases, the most that has been accomplished is to teach the children the melody of a few hymn tunes and songs; and in many cases, even so much as this has not been attempted with any degree of success. The number of schools in which the children are taught systematically to read music from notes, and can sing simple sacred and secular tunes in parts, is com-

paratively small. But now that education is becoming more comprehensive in its character, and is being more generally diffused over the nation, music is beginning to take its place as a branch of national education. Various efforts are being made with a view to spread the knowledge of singing among the people, and various methods are proposed for teaching the subject. Teachers are prepared at the normal colleges for giving instruction in it, and the ability to teach it is almost everywhere required in candidates for the office of master or mistress of an elementary school.

Drawing. The study of drawing is not cultivated among the schools under my inspection.

Other subjects. The remaining subjects may be dismissed with a few words. In several schools it is professed to teach Latin and Greek; but it appears to me that this should be limited to a special class, and not included in the work of regular school hours. What has hitherto been done in this particular is not worth speaking of, except in individual instances, which do not belong to the genuine operations of the school in which they are found. One word should be added upon *needlework*, an extremely important element in the instruction in female schools, because I can report with pleasure that in the schools in which the intellectual character is most satisfactory, skill in needlework is almost always conspicuous.

Results. The sketch which I have now given may suffice to indicate the subjects of instruction, and to afford some general notion of the measure of progress made in each, in the better sort of elementary schools. The statement, brief and imperfect as it is, contains adequate evidence to support the conclusion which I propose to deduce from it, and which is this, that a very solid educational work is now being accomplished in a large and increasing number of the elementary schools connected with the Episcopal Church of Scotland.

Normal College. In regard to the Normal College at Minto House, Edinburgh, examined by me in September last, I am glad to state that, both in the training and practising departments, it continues to be in a state of high efficiency. I am not aware that since my last report any change has taken place in the arrangements of either to call for particular notice. The number of students in residence is on the increase, and I understand that their average attainments on entering were considerably higher than usual. The number now in attendance is twelve, and I have no doubt that their character as a body will be improved by the admixture of Queen's Scholars, who, after September next, will, it is confidently expected, form a considerable proportion of the students. Perhaps the most satisfactory evidence of the sound instruction imparted

in this institution is to be derived from the appearance of the students in the examination for certificates of merit, and the large proportion of them who were successful candidates in the course of the past year. This examination was held in Edinburgh in the month of June last, and of the eight resident students of the training school seven obtained certificates. This fact seems beyond mistake to prove that the instruction in the institution has been brought up to the standard suggested by the examination papers as well as could be reasonably expected. In a report which I had the honor of submitting to your Lordships during the last summer a full description was given of the *buildings* connected with the institution, their site, their arrangements, fittings, ventilation, &c. These points I need not now repeat. It will be sufficient merely to state that they consist of a normal college capable of containing 25 students, of three practising schools, furnished with ample accommodation, class-rooms, and playground, and of residences for the reverend principal and the vice-principal. The transference in September last of the institution from St. Andrew's Hall to Minto House was a most desirable and important movement, and my personal experience of both localities leads me to augur the most satisfactory results from the change. Nothing can be more appropriate than the several departments to their several purposes. Everything about the institution is thoroughly adapted to the end in view, and does great credit to the exertions of the Committee, and to the sound practical character of the Rev. John Hunter, the Principal, who has carried the whole matter most successfully through, in spite of difficulties of a most formidable nature; of the tried abilities and high professional position of this gentleman it is impossible to speak in too high terms of admiration and respect. Mr. Hunter is ably assisted by Mr. Leach the Vice-Principal.

Pupil-teachers.

The pupil-teachers continue to give satisfaction, and I am happy to say that the cases are very few in which any of them have been removed for unsatisfactory conduct. At the same time, I must observe that school managers and teachers cannot be too cautious in making their selection of candidates, not only on account of the importance of the calling of a teacher, but also on account of the trouble which may be given and the mischief which may be caused by an ill-disposed and artful apprentice. I feel it my duty to caution school managers on this head.

Conclusion.

In concluding this report, I may sum up the educational results and wants of my district in a few brief statements. A large number of schools are well organized, and efficiently conducted under able, intelligent, and well-trained teachers.

A supply of good masters and mistresses is likely to be furnished by the existing system of pupil-teachers. The elementary instruction is improving. The religious and moral training of the children, far from suffering from the increased amount of secular knowledge, has been materially improved in proportion to that increase. On the other hand, many districts are scantily supplied with school buildings. Many schools are improperly organized, ill supplied with books and apparatus, and conducted by untrained, ill paid, and inefficient teachers. The supply of teachers falls short of the demand. The remedies for such evils are, happily, not less obvious than the causes in which they originate; and these remedies, through the liberality of your Lordships, are now being applied through a variety of channels. Increased facilities in the erection of school-rooms; larger assistance under satisfactory conditions; special grants in circumstances of special difficulty; an extension of the system which has received such general approbation, and produced results so satisfactory; these are already giving a fresh impetus to that educational movement which promises so much towards the providing adequately of a really national system of elementary education.

Lastly, I beg to be permitted to express to the Right Reverend the Primus, and the other bishops of the Episcopal Church of Scotland, as well as to the clergy and school committees, my deep sense of the obligations which I have incurred, for their uniform kindness, hospitality, consideration, and sympathy, and to assure them that to their cordial and intelligent co-operation much of the success that has attended my labours for the last five years is exclusively due.

I have the honor to be, &c.

T. Wilkinson.

To the Right Honorable
The Lords of the Committee of Council on Education.

Report *on the* Church of England Training Colleges *for* Schoolmasters, *by Her Majesty's Inspector of Schools, the* Rev. F. Temple, M.A.;—*for the Year* 1856.

My Lords,

The inspection of the Male Training Colleges in connexion with the Church of England took place during the summer and autumn of last year. In the discharge of this duty I had on every occasion the advice and aid of one of my colleagues, in accordance with the custom established before my appointment. I have now the honor to submit the results then collected, and to make some remarks on what still requires improvement in these institutions.

Statistical summary.

The number of training schools thus visited was 14. The total number of students in residence at the time of the visit was 632; namely, 377 in the first, 221 in the second, and 34 in the third year of their residence. Of these 428 obtained places in the class list at Christmas, and 73 in the schedule; 68 failed, and 63 did not present themselves for examination. The total income of the training colleges was about 35,468*l.*, of which 3,824*l.* was paid by the students, 15,163*l.* by the managers and subscribers, either from their own funds or by the aid of diocesan or other educational societies, 16,481*l.* by your Lordships in the form of grants. The number of lecturers and masters employed was 95. The total current expenditure was 32,714*l.*

Financial difficulties, and their cause.

During the last two or three years these colleges have passed through a kind of financial crisis. Though their prospects are now brightening, and the difficulty will undoubtedly not last much longer, it cannot be said to have yet entirely ceased. This crisis has been caused by the erection of training colleges having a little outrun the supply of students. Before the year 1852 the students were obtained from a different source from that which at present supplies them. They were picked up, as it were, by accident; many with no previous training for their profession at all; none with more than they might have obtained by acting as voluntary teachers in Sunday schools. These men were in some respects a very inferior, in some respects an excellent, material for the purpose to which the colleges hoped to apply them. They had generally everything to learn; but having for the most part chosen their profession not simply as a means of livelihood, but from a real love of teaching, they showed often a zeal and aptitude not to be easily replaced by any other qualifications. Such a source of supply was easily exhausted,

and certainly could not have filled the colleges now at work. But it was always anticipated that when the pupil-teachers, apprenticed under the Minutes of 1846, began to pass into the colleges, the supply of students would be more than enough. Training colleges were erected in this hope. And in 1852, when the first group of pupil-teachers had finished their apprenticeship, and were ready to become students, thirteen training schools connected with the Church of England were ready to receive them. The stream was not, however, by any means so full as had been confidently expected. A considerable number of the pupil-teachers, instead of entering the colleges at the close of their apprenticeship, found immediate employment as masters in village schools; some left the profession altogether. And this was not all. Not only did the new supply of students itself fall short of calculation; it also tended to diminish the supply from the original source. The new students were in many respects very different from the old. They were almost always much younger, much better taught, and much quicker to learn. The old students felt themselves unfairly matched against such competitors, who even when inferior in the more valuable qualifications for the office of a teacher, steadiness and maturity of mind, were sure to excel in all that makes a show. The consequence might have been expected. Several principals have told me that they found it much harder than formerly to bring the old sort of men into their colleges, and they attribute this to the cause that I have mentioned. For these reasons the colleges found greater difficulty in keeping faith with their subscribers than they had expected. They had calculated on being entirely full, and therefore availing themselves largely of your Lordships' grants on account of certificates of merit. Since these grants depend on the number of successful students, it followed that when the students fell short of expectation, the grants did also. Several of the smaller training schools found themselves in consequence grievously embarrassed, and during the past year some talked of closing.

It is obvious that these difficulties are temporary. The number of apprentices increases year by year, and as the source of students increases, so does the supply, and in a very few years the balance will be restored. These difficulties temporary.

In the meanwhile, I have no doubt, that the Minute of the 2nd of June last will prove a great relief. Before that Minute pupil-teachers, at the close of their apprenticeship, were often tempted to seek immediate employment either as masters or otherwise, because they did not know how else to dispose of the interval which generally had to elapse before the next examination for Queen's scholarships. It is true that they were allowed to retain their apprenticeships till the ensuing

Christmas if they chose, but boys of that age are generally eager to get away from school, and the permission was not largely used. By the Minute they were allowed to go at once to the training schools, and to receive when there, till the Christmas ensuing, the payment of their stipends as if they were still apprentices in the fifth year. This payment covered or nearly covered their fees as students for the time, and was almost as good as a scholarship so long as it lasted. Moreover it is obvious that their chances of obtaining Queen's scholarships would be much increased by their thus receiving instruction from the college lecturers in anticipation of the examination. I find that sixty-five pupil-teachers availed themselves of this Minute last year, though of course it could not come into operation till after the Midsummer vacation. Next year the number will probably be very much more than doubled.

The Minute of the 2nd of June gave a further relief to the training schools, by opening the Queen's scholarships to candidates who had not been pupil-teachers. Thirty-seven such candidates were successful at Christmas. The admission of these scholars will be sensibly felt in the training schools, while at the same time it does not in any way interfere with the pupil-teachers, since there is still room for more students than the pupil-teachers can supply. It is probable that the class of men obtained in this way will be peculiarly valuable, since although they may not have had the advantage of previous training by apprenticeship, they will be all the more likely to have chosen the profession of a schoolmaster from natural aptitude and consequent preference. The examination meanwhile is sufficient to exclude those who wish to be teachers because they have failed in everything else.

Work done in training colleges generally good.

The work done in the training colleges appears to me, with one exception, to be improving as steadily and as rapidly as could be desired. The definiteness given to the examinations by Mr. Moseley's programme, has had the best effect both on the students and the lecturers. There is always a tendency in the infancy of such institutions to attempt more than can be accomplished; and the training colleges have not been free from this mistake. Year by year, however, they seem to see more clearly what they ought to do, what they can do, and how they can do it best; and the more definite character of the annual examinations contributes much to this result. The answers of the students are less superficial and less inaccurate than they used to be. The more elementary subjects (which are in reality by far harder than the more advanced) are beginning to acquire their due importance. Much improvement is still possible in this direction, but there can be no

doubt that only time is needed to make it. I think it right to mention as a just tribute to their hard work, that on the whole the Cheltenham students showed the most thorough knowledge of the subjects in which they were examined at Christmas.

Exception being that art of teaching is not sufficiently studied.

The one exception to the goodness of the work in the training schools is in the study and practice of the art of teaching. Battersea, perhaps, on the whole succeeds best in this respect, but even Battersea has still very much to do.

Change in mode of testing proficiency in this art.

My predecessor in office, Mr. Moseley, has frequently referred to this subject in his reports, and just before he quitted office made arrangements for giving it a more prominent place at the visit of inspection. The plan which he proposed to adopt was originally suggested by Mr. Cook, and first practised in the inspection of Female Training Colleges. It is described by Mr. Moseley in the following passage:—

"For the office of schoolmaster, however, qualifications other than such as can be made the subjects of a written examination are required. I do not speak here of that moral and religious culture of which the responsibility rests, in respect to pupil-teachers, with the clergy of their respective parishes, and afterwards with the training schools. I speak only of what belongs professionally to the work of the teacher. In this, all which can be made the subject of a written examination is his knowledge of the subjects which he has to teach, and of the rules which are to be observed in teaching them. His *judgment* in the selection, from among many subjects, of those which are proper for the instruction of children, and his *manner* of teaching those subjects, it is not within the province of such an examination to test. To these qualifications of the teacher my attention has therefore specially been directed, in my personal visits to the training colleges, and I have sought, in the judgment I have been led to form concerning them, the assistance and the advice of my colleagues, with one of whom in each such visit I have been associated. I am far from feeling satisfied with what I have been able to accomplish in this respect, or from thinking that the *influence* of your inspection or your examinations is thrown sufficiently into the scale of that which belongs to the training college distinctively as a school for the education of *teachers*, and which looks upon everything that the students have to learn in the light of that which they will also have to teach. The only official recognition of this function of the training college, besides the one paper of questions on '*method*' set among so many on other subjects at your examinations, is the report made by one of your Inspectors on the lesson delivered in his presence by each student, on becoming a candidate for a certificate. But, as these lessons are delivered at the annual examinations which, at different training colleges, are presided over by *different* Inspectors, each is referred to the standard of merit present, as the type of a good lesson, to the mind of that particular Inspector who hears it. Great discordance is to be expected in results so collected. It would add greatly to the efficiency of your inspection if these lessons were heard and reported upon by the same Inspector, and if some other period of the year than that of the annual examination were assigned to them in each college."—*Minutes of* 1854-5, pp. 294, 295.

In accordance with this proposal the students of the second and third years in every training college were required each to give a lesson before myself and my colleague for the time being, and the reports on these lessons were substituted for those which were formerly made on similar lessons given at Christmas,

I am satisfied that the change is a great improvement. The hearing of these lessons, from the time and care that it demands, has become the most important part of the Inspector's duty. His attention and the attention of the college is necessarily fixed, during the greater part of the time devoted to the inspection, upon the skill which the students have attained in their art, and upon the means which have been employed to cultivate that skill. The students are compelled to feel (what it was always difficult to impress upon them before) that their power of teaching tells heavily on their future position. The Christmas examinations will always and of necessity tend to encourage the acquisition of knowledge rather than of method, but the Inspector's visit must henceforward tend to correct this, by throwing his entire weight into the opposite scale. Nor do I know any subject which more fitly falls within the Inspector's proper province. Knowledge, of whatever kind, may be fully tested on paper, and there would be no need for an annual inspection, if the work of the college might be rightly measured by the amount of knowledge attained by the students. But professional skill can be tested in no other way than by actual sight and hearing.

This change, though good, not yet enough.

I cannot, however, yet feel satisfied that I have done enough in the direction which Mr. Moseley indicated. The lessons which we require the students to give before us are what are called gallery lessons; that is, they are specimens of oral teaching. Such lessons are admirable tests of power to command a class, to keep the minds of the children in full activity while they are being taught, to adapt information to their capacity and their need. To give a good oral lesson is, perhaps, the severest trial both of nerve and of skill to which a teacher can be put. And I have no doubt that the judgment, founded on this exercise, is substantially just, and would be but little if at all modified if other trials were added. But it has the great disadvantage of leading the students to forget that there are other and by no means less important duties incumbent on a schoolmaster besides that of giving good oral lessons. The organization of a school upon which its steady working so entirely depends; the mode of teaching the staple subjects of elementary instruction, reading and writing; the management of pupil-teachers or monitors; the proportion to be maintained between the oral teaching and the teaching from text books; or again between explanations of any process in arithmetic or the like, and the practice of the same process; all these are obscured by what cannot be compared with them in utility for practical purposes.

Nor is this all. There is a tendency in the gallery lesson to throw the whole labour of instruction on the teacher. The children play an entirely subordinate part. As little mental

effort as possible is required of them, and the questions which they have to answer lead them upward by such gentle steps that, whether by guessing or by real inference, they seem to solve difficulties which are in reality far beyond their reach. The teacher is apt to suppose that what they can thus do while he is guiding and aiding and almost prompting them is a fair measure of their hold upon what they have learnt. As far as mere information is concerned this may be true. It is sometimes quite astonishing to find how much of a good oral lesson children will remember, and even re-produce. But nothing would be a greater mistake than to suppose that the reasoning or other mental act of which a child seems capable when thus sustained by a mature mind is any measure of what he will do when unaided, or even any measure of the cultivation which he is receiving. A long interval separates the comprehension of an act of reasoning from the power to imitate it; or rather the two things are different in kind. A boy who could perfectly follow a very difficult arithmetical problem when worked before him on the board, and in whose answers during the work you could not detect the slightest proof of want of comprehension, would certainly fail in working a very easy problem by himself if he had never before been so tried. Yet I have repeatedly met with teachers who fancied that the children could do whatever they seemed to understand; that a boy, for instance, who had followed with attention and apparent intelligence the working of a hard sum in proportion could of course work an easy one for himself with accuracy; or that one who had answered really hard questions in a lesson on a complicated weighing machine would be able at once to understand a common steelyard without further explanation. The fact is, that all the best cultivation of a child's mind is obtained by the child's own exertions, and the master's success may be measured by the degree in which he can bring his scholars to make such exertions absolutely without aid. The gallery lesson is of the highest value as a stimulant and a preparation for this, but it is no more; and if the master stops there, and believes that he has done his task when he has given animated clear lessons, and has demanded from his scholars no other effort of their own than is required to follow these lessons while they are given, and to answer questions which grow out of them at the time, he will assuredly find the result to be a superficial, inaccurate, disjointed knowledge which will neither bear the close examination of an Inspector nor supply the children with real discipline of mind. The business of the schoolmaster is not so much to teach as to make the children learn. Whatever makes learning pleasanter, completer, or surer to them, that he ought to supply; but the moment that he takes

their work upon himself, and does for them what they ought to do and can do for themselves, he is doing harm.

I should be sorry if I were to give the impression that I undervalued the oral lesson. It is a weapon of such great power when wisely used that a teacher who cannot wield it is but half armed. Nothing else has the same effect in rousing the sluggish, in awakening the stupid; in kindling the imagination, in making a vivid and lasting impression on the memory. It is a better stimulus than either prizes or punishments. And the practice of giving such lessons is even of more importance in the training of the students than the lessons themselves, for in no other way could they cultivate to the same degree the art of giving readily and clearly those explanations and illustrations which make the chief difference between good and bad teaching. In fact, in one sense, it may be said that a good schoolmaster will be perpetually giving oral lessons, for he will never hear a reading lesson, he will never correct an exercise or a sum, without finding frequent occasion to explain or to illustrate or to ask questions; and the best way to teach him how to do this is to practise him in formal gallery lessons, for by this means he acquires the necessary flexibility and the necessary readiness both of manner, words, and thought.

But useful, nay, indispensable as the oral teaching certainly is, it is impossible not to feel with Mr. Moseley, that "it is often greatly and singularly misused," and there is no misuse of it so great as that of fancying that it contains the whole art of the schoolmaster. I should be glad if it could be more effectually impressed on young teachers that it is after all only one means out of several which are all needed, that it has an appropriate function in teaching, but cannot grasp more than that function, and that they have other things to learn in their profession besides how to give a gallery lesson.

Deficient study of school management.

It is chiefly to deficient study of school organization and school government that I attribute the complaints, which have been frequent of late, that the students in training colleges often know a great deal of everything except their professional duties. Some of my colleagues have already expressed their agreement in this complaint. The Rev. M. Mitchell stated last year that in the training colleges "enough attention had not been paid to all that is included in the words 'school management and methods,' and that, therefore, even teachers possessed of much knowledge have been found, through this defect, unequal to the duties demanded of them."—Minutes, 1855, p. 411. The Rev. H. W. Bellairs gives it as his experience, "that many of those now holding the early first-class certificates are by no means entitled to their position"—Minutes, 1855, p. 331; and he apparently ascribes this to the same reason, a want of good

professional training. And at the conference of Her Majesty's Inspectors before the Lord President last year there was a very general concurrence of opinion to the same effect, and a wish was expressed that the subject should receive particular attention in the future inspection of colleges.

Too much must not be expected from training colleges in this respect.

It would not be fair to expect from the training colleges that they could entirely supply the place of actual experience, and send out young men as capable of managing a large school as if they had passed many years in the actual discharge of such duties. It would be expecting from the colleges what we do not expect from any other place of education. The clergyman learns the practical part of his duty in a parish, the lawyer in the courts, the surgeon in practice. The schoolmaster, too, when he first comes from the college, must be comparatively inexperienced, and will have much to learn which he can only learn in a school.

To the want of that experience, for which no amount of professional study can be a complete substitute, must be added as another cause of inefficiency, the immature age at which our students are now sent out to act in independent positions. My colleague, the Rev. F. Watkins, pointed this out in his report the year before last:—

"But as trainers—as formers of the heart as well as of the mind of the working classes—as engravers of that character which should be stamped upon them—how do the certified teachers stand? They, for the most part, have one obvious and great disadvantage. They are very young when they enter upon their duties, and they have to deal with very young children. But the younger the children to be trained, the older within certain limits, should the trainer be. He has more need of experience, of self-knowledge, of discernment in child-nature, and sympathy with child-life. He has before him a more delicate and continuous work than he who acts upon the juvenile boy or girl. From some observation, I am inclined to think that many of the certified teachers of the present day—men perhaps more than women—several of those especially of higher attainments, are not good trainers or managers of their schools. They either trust to a sharp but unintelligible discipline, and enforce a rule where they ought to uphold a principle, or they are altogether unobservant of little things, as if they were trifles instead of steps to great things; they often spend the school-time in lecturing rather than teaching, and in displaying their own treasures rather than in increasing the little store of the children's knowledge."—Minutes, 1854–5, pp. 431,432.

For these two defects in teachers fresh from their studies, youth and inexperience, the training college cannot be held responsible; and probably the evil complained of will never be quite remedied till the supply of schoolmasters is so increased that it shall become the common practice for a student, instead of going, as now, to take the independent charge of a school into his own hands, to act for a few years as an assistant under an experienced teacher.

Yet, after making all these allowances, it still remains the fact, that much more might be done than is done to fit the

students in the training colleges for their future duties. The professional part of their instruction is still much below the general, and much below what it might easily be made.

Requisites for study of art of teaching.

To learn the art of teaching the students require three things, practice under careful supervision, the study of good models, and sensible lectures both on the principles of the art and on the application of those principles. It cannot be said that any training school at present supplies all these, or even one of these in its perfect form; but enough is done to render it possible by combining the results attained in different places to give a sketch of what might hereafter be attained by all, and if attained, would go far to meet the demand for better professional instruction.

First requisite—I. Practice.

Of the three requisites above named the most important is unquestionably practice. Practice, even without theory, may in most cases be made to do something for the acquisition of such an art as that of teaching; theory without practice will generally do nothing. The training colleges have recognised this, and there is now hardly one of them without an elementary school attached to it known as the practising school. To this practising school the students are sent in rotation to work under the guidance of the normal master, and in some cases a very considerable proportion of their time is assigned to this employment.

a. Practising school.

The work in the practising school, however, is often deficient in two respects; the work is neither superintended nor arranged with sufficient care, and it is almost entirely confined to class-teaching and rarely extends to the school-management.

Not under sufficient supervision.

The need of supervision over the students in the practising school, or of a careful arrangement of their duties there, was once not so great as it is now. When the students were gathered, somewhat at haphazard, from sources of every kind, the chief use of the practising school was simply to accustom them to stand before a class of children, and to overcome by familiarity the bewilderment which seized their faculties at so novel a position. They needed to learn, not how to teach well, but how to teach at all. Everything like finished method was out of the question; and although many of them may now rank among the most valuable masters that we have, their skill, in as far as it is due to the training college, has been much more due to the spirit which they caught than to the system which they learnt there. They received an impulse and an aim, and personal energy and steady perseverance has enabled them to work out gradually for themselves the methods which would best correspond. The best use of the practising school in training such men was simply to give them a great deal of practice. They were older than the average of

the present race of students, and could be generally trusted not to give way to levity or temper, and all they needed was an occasional remark upon some obvious defect in their way of teaching or governing the children.

But the introduction of the Queen's scholars has made a great change. The students are now almost universally youths who have been engaged in teaching for five years or more; they are perfectly familiar with the ordinary management of a class; mere practice is of no further use to them. On the contrary, if they have formed any bad habits before coming to the training college these habits are liable to be confirmed, and if not they are at any rate not likely to gain much by persevering blindly in what they have already mastered. Nor is this the worst. The students who are thus kept at what takes the form of a mechanical drill begin to feel that their work in the practising school is not for their own sake, but for that of the school. They are not conscious in themselves of any improvement; they are not stimulated by the remarks of the normal master to aim at better methods; they fancy that all the time that they lose from their reading and lectures diminishes their chance of a good place in the class list; and hence this, not the least important part of their study, is almost invariably disliked. Being disliked, it is made a matter of routine, to which the student gives neither his thought nor his care, for which he makes little preparation beforehand, and on which he reflects very little afterwards.

Students too often sacrificed to practising school.

The fact is that, in too many cases, the students are sacrificed to the practising school. They are viewed when there not as learners but as assistants. A student is set to teach a given class, not because that work is suited to him, but because that class needs a teacher, and there is no one else to teach it. The practising school, on the contrary, ought to be so organised as to leave the normal master free to employ each student that comes there as may be best for his individual case. One student may safely be put to take a class, and will need no more than an occasional glance. It may be best for another not to teach at all, but to watch and take notes of what is done by a better teacher than himself. A third may require very frequent and careful supervision. The adaptation of each man's work to what will most improve himself, careful supervision of his method and criticisms on it, occasional examples set before him for study and imitation, these are necessary to make a student's practice tell upon his skill; and these require, besides great care and pains on the part of the normal master, an organization which enables that officer to deal with the students quite independently of the practising school.

Such an independent organization of the practising school is as necessary for the sake of the normal master as it is for

that of the students. He must otherwise be overwhelmed by an accumulation of duties far beyond the powers of any one man. While the students are under his charge, he ought to be able to give his chief attention to them, and not to the children. He must be supreme over the practising school, or his authority over the students will be weakened; but the school ought not to be so entirely dependent on him as to draw off his care from the students, who are his proper charge. Either the mastership of the practising school should be entrusted to another (though a subordinate) officer, or if he hold that office himself he should have an able assistant. I have sometimes seen the care of the children devolved on a few of the most skilful of the senior students; but I think that such a plan would rarely succeed. The best arrangement, in my opinion, is to have an able assistant master and a full staff of pupil-teachers.

Proper organization of practising school.

No practice in school management.

The giving of lessons is not the only duty of the schoolmaster. But in most of the training schools this is the only practical work in which the students are exercised. I know only one* training college, the Metropolitan, at Highbury, where the students are ever required to superintend more than a single class at a time. The arrangements made at Highbury are thus described by Mr. Daintree, the normal master:—

"The practising school of the college is divided into the senior and the junior. The number of boys is 245; of this number 175 are in the senior, 70 in the junior school.

"The boys in the senior school are divided into three divisions, and each of these is sub-divided into two classes. The boys in the junior school are divided into three classes. There being thus nine classes in all, we are able to afford sufficient daily practice in teaching to nine students, one to each class.

"But we aim at giving our students a higher degree of training than that of mere teachers of classes.

"To this end they are arranged in two divisions, senior and junior.

"The senior students, *generally* those of the second year, are appointed to take charge either of the junior school or of one or other of the divisions of the senior school; and each one is held responsible to the head master for the proper government and instruction of all the boys placed under his charge. The junior students, who are generally those of the first year, are placed as teachers of classes under the direction of the seniors, to whom they are strictly subordinate. There are thus three senior students and three junior employed in the senior school, and one senior and two junior in the junior school.

"The whole amount of time allotted to the students for attendance in the practising school is from ten to twelve weeks, which is distributed over their two years, in the following manner:—During the first half of their first year the students attend in the school for periods of two weeks each; and during the second half of the same year they again attend for periods of four weeks each, and in very many instances this is deemed sufficient; but in cases where it is otherwise, a further attendance of two weeks is required for the second half year.

* Since my visit last year, I find that the Cheltenham Training College has taken steps to remedy this deficiency in their system.

"By the means which we have for separating the divisions of the senior school, each of these divisions becomes as it were a distinct school of from fifty to sixty boys, over which one of the senior students has entire control, and for which he is responsible. But our organization affords scope for other combinations and modifications. Thus, occasionally, one senior student is left in charge of the junior school, assisted by one other student and a monitor; or, sometimes, with the aid of only a candidate, pupil-teacher, and a monitor. Or, as during the present week, the first and second divisions of the senior school are thrown together, constituting, as it were, one school of 120 boys, and the whole is placed under the charge of one senior student, assisted by three others subordinate to him."

Without saying that this is the best possible arrangement of the students' work, I think it sufficiently obvious that there is here an attempt (and I should say a well conceived attempt) to teach the students something more than the handling of single classes. The charge of a school division probably approaches as near to the charge of a school as anything that can be supplied to a student during the time of his training. The success of such a plan depends on how far the normal master watches the students while thus engaged, notices their defects, and encourages their improvement.

b. Practising lessons.

Besides being sent to the practising school, the students in many colleges are exercised in their art, by having to give lessons to a class of children, in the presence of the normal master and the other students. These are called practising or criticism lessons. A class of children is taken either to the training school or to a class-room in the same school, the students assemble in the same room, the student appointed to give the lesson teaches the class for twenty minutes, the children are then withdrawn, and the normal master criticises the lesson before all the students, and points out in detail its observance or neglect of the acknowledged rules of good teaching.

How these may be best conducted.

This exercise varies very much in value. It is always useful; but, when well managed, is one of the most effectual that can be devised. The value of it depends on the degree in which the students are led to observe and reflect upon all the details which constitute a good lesson; and this again depends on the degree in which the criticism proceeds on known and systematic principles. If the remarks made upon the lesson are simply the result of what may occur to the normal master at the moment, they are, of course, valuable in proportion to his good sense and experience. But their effect is much diminished by their want of completeness. The students are led to notice faults, but for want of a definite scheme to which they may refer what they hear, they have no perception of the proportion which these faults may bear to the lesson; they have no clear sense how such faults are to be avoided without introducing others. To prevent this, the best normal masters always supply their students with a sort of classified table of the

points which particularly require attention. Thus they may be required to observe,—

I.—The *matter* of the lesson; including under this head the aim of the teacher in giving it, the value of the information conveyed or of the mental exercise involved, its fitness for the class to which it is given, the completeness and accuracy of the teacher's knowledge of his subject, the logical sequence and proportion of his divisions and sub-divisions, the logical soundness of his reasonings.

II.—The *manner* of the lesson; meaning by this the gesture and bearing, the energy and vivacity of the teacher, the sympathy which he succeeded in creating between himself and his class, the vigilance with which he controlled all tendency to inattention, the skill with which he adapted himself to incidental circumstances, and especially to the children's answers.

III.—The *illustration;* including here the proper use of the black-board, the supply of all suitable apparatus, models, maps, and the like, or fertility in the invention of substitutes; and, lastly, and especially, the suggestion of striking and sound analogies.

IV.—The *language;* that is, both the correctness of pronunciation and grammar, and also the choice of simple and appropriate expressions.

Other classifications of the leading points of a good lesson might easily be devised. The above is that which Mr. Cook and myself have been accustomed to use in watching the lessons on which it is our duty to report. But though it is advisable that this classification should be as exhaustive and as logical as possible, it is comparatively a minor matter what classification shall be adopted. What the students require is a map of their work. They want to know precisely what they are to aim at. And some such system as I have described is the only way to give it to them.

In some of the training colleges the students themselves are required to criticise the lesson given by their fellow student, and the normal master sums up by criticising both the lesson and their remarks upon it. This requires to be watched with care, as it may very easily foster conceit. But as a means of bringing the students thoroughly to understand what constitutes the difference between a good lesson and a bad, this plan can be hardly equalled. The best mode of conducting it that I have met with, is to assign to special students, on each occasion, the duty of watching special points; thus, for instance, two or three would be appointed to watch the matter, two or three the manner, two or three the illustration, and two or three the language. When the children had been withdrawn,

the normal master would call upon the appointed students in succession for their remarks, and, finally, give his own. By this plan the students are exercised in careful observation, and saved from the danger of vague and groundless judgments, which are almost unavoidable if inexperienced critics are left without any definite limits for their criticism.

Lecturers ought to be present at practising lessons.

These practising lessons are capable of being so useful, not only to the students, but to all concerned with their instruction, that I feel bound to express myself strongly in favour of the rule adopted at some training schools, that some, if not all, the other lecturers should be present as well as the normal master, and should take part in criticising the lesson. Every lecturer ought to be, if the arrangements of a training college were perfect, master of method in his own subject. The normal master has quite enough to do if, besides perpetually superintending the students in the practising school, he has to lecture on school management and school discipline, and on the methods of teaching reading, writing, and spelling. But if this cannot be secured, yet, at any rate, every lecturer ought to have constantly impressed on his mind that he is teaching teachers. He ought, therefore, to take some part in the professional instruction of the students, and if he cannot lecture on methods of teaching, he ought to be able to criticise lessons in his own subject.

Second requisite—II. Good models.

The second requisite for good professional instruction is the study of good models. The practising school in all its details ought to be a model of a school; every lecturer in the training college ought to be a model of a teacher; special lessons ought frequently to be given by the normal master, as models of lessons. And not only ought the students to be thus brought within the unceasing but imperceptible influence of the best examples of their art, but they should be taught to study these models with care, and ascertain for themselves on what their excellence depends.

I have already adverted to the change in the previous training of the great majority of the students, a change which has much altered the proper function of the practising school. I have endeavoured to point out that mere practice without supervision, and without adaptation to individual cases, is no longer as useful as it was formerly. This change has also much increased both the necessity and the value of the part of professional instruction which I am now considering, namely, the study of good models. This part, however, has received as yet very little attention. At some of the training colleges model lessons are occasionally given; but the practising school is rarely a model school, and still more rarely used as such; and the lecturers do not seem to be yet sufficiently sensible of

the importance of making their lectures models of teaching. The only practising school with which I am acquainted that can be called a model, is that at Caernarvon. In that case, however, the elementary school is very large, and the training college very small; the elementary school is the older, and the college has been attached to it, and not it to the college. These circumstances have made the case exceptional.

a. A model school needed.

To make the practising school as a whole a model is, in most cases, excessively difficult, in some, perhaps, impossible. Even if all the students who were to be employed in it were first-rate teachers and managers, the constant change would impair the efficiency of the discipline. But the students are sometimes raw and inexperienced, are always still learners. The result is that both discipline and cultivation suffer. The children are sure to be sharpened, sure to be stirred into more than usual activity of mind; but they are apt to lose in accuracy, in steadiness, and in obedience. They generally answer questions with readiness and intelligence, but they often read and write ill, and are inaccurate in arithmetic. They are generally lively and cheerful, but often insubordinate and inattentive. In addition to this the practising school differs entirely in one respect from any elementary school in which the students will be afterwards employed. In most elementary schools the ingenuity of the master is chiefly exercised in supplying the want of teaching power; in the practising school there is a plethora of teachers. All those expedients which a good teacher uses to economise his teaching are needless in the practising school, and therefore never exhibited to the students. It would not be wise to encourage the direct study of what may be called the science of makeshifts. Generally speaking a man learns best how to provide substitutes by having the proper appliances at work in their full perfection. But the perfection should be at least the same in kind as the copy. The conditions of the practising school, on the contrary, differ essentially from those of the ordinary elementary school, and the master of the latter must in many ways aim at an ideal which the former cannot show him.

If it were not necessary to the completeness of my subject, I might, perhaps, have passed over what I have to say on this point; for I am but here repeating what was urged by Mr. Moseley in 1853, and there is obviously no other remedy than that which he then pointed out. There ought either to be a model school separate from the practising school, or at least one division of the practising school should be organized separately to fulfil the same office. Into this the student should be sent, not as a teacher, but as a learner. He should be required to take full notes of what he sees done, giving his

attention successively to special points of detail, according to a routine laid down by the normal master. These notes should be carefully criticised, in order to point out where he has missed observing the essential features. He should be encouraged to inquire into the reason of what he observes, and allowed to suggest improvements. Such suggestions would best show the difficulties that lay in the way of his thoroughly understanding the system pursued.

I am convinced that much of the time now spent by the students in the practising school would be much better employed in thus watching and studying the work of good teachers than in teaching. But, of course, it is essential to the utility of such a study that it shall not degenerate into a mere imprisonment of the students in the model school for so many hours. Such work is useless unless it is carefully overlooked, unless pains are taken to guide the students in their observation by a carefully prepared system, and to test them afterwards by a careful examination of their notes. It is by this kind of study that they will best learn not merely the art of teaching a class, but the art of keeping a school. And the model lessons of the normal master would then come in as part of a system, and not as mere isolated *tours de force.*

b. All the lectures should be models of teaching.

Perhaps, for the same reason that the practising school is rarely thought of as a model school, the lecturers in training schools rarely feel themselves responsible for the influence which they inevitably exercise on the manner of the students in teaching. Yet in all cases this influence is very great. If the lecturers be sleepy, or wordy, or dry, or stiff; if they be deficient in power of illustration or explanation; if they reason hastily, or assert inaccurately; if they do not understand the right use of the black-board, or of maps; all these faults are sure to be repeated and often exaggerated in the lessons given by the students. And this is the case even when no deficiency can be traced in the papers worked at the annual examinations. For the students are not in the position of children at an elementary school. They know that all their future prospects depend largely on the places they may attain in the annual class list; they are of an age when that knowledge acts powerfully on their conduct; and, whatever may be a lecturer's faults of manner, they will often contrive in spite of them to learn what he has to teach. Moreover, he is generally living in the college, and consequently sees much more of the students than merely in the lecture-room. He often assists diligent men by occasional explanations out of lecture hours. His mind is impressed on theirs by frequent intercourse, and whatever he possesses they obtain by many other ways besides his lectures. In this way his deficiencies are often made good,

and the marks given for his subject at the Christmas examinations will deceive him into the impression that his methods are sound. But meanwhile the students unconsciously catch his manner, and the faults which he shows in teaching men they copy in teaching children. The children, however, are not of the age to supply by any exertions of their own, and have not generally the opportunity to supply by intercourse out of school hours, what is wanting in their teachers. And the faults which, perhaps, do not more than slightly diminish the efficiency of the lecturer are fatal to the efficiency of the schoolmaster. This cause contributes very largely to the defective modes of teaching now so much complained of in the younger schoolmasters. I have more than once remarked that when any fault in the mode of teaching was exhibited very generally by the students of a training college, it was but the copy of a similar fault in one or other of the lecturers.

This want of adaptation to their peculiar duties is by no means uncommon among the lecturers. At the same time I ought to add, that I have reason to believe it not so common as it was, and I am convinced that it will soon disappear. There is no body of men more sincerely desirous of the welfare of institutions intrusted to their care than the officers and authorities of training colleges. And as the lecturers learn to consider themselves responsible not merely for the knowledge but also for the professional skill of the students under them, they will rapidly adapt their mode of lecturing to the duties of their position.

Third requisite—III. Good lectures on art of teaching.

The third requisite for instructing the students in the art of teaching is to be found in sensible lectures.

Such lectures are already given in most of the training colleges, and sometimes (as especially at Cheltenham and St. Mark's) contain a great amount of valuable information. In them the normal master goes over the aims which a schoolmaster should have in view, the discipline and instruction as means to attain those aims, the organization and management of the school most conducive to good discipline and thorough instruction, the subjects of instruction most fit to be taught to children, and the best method of teaching each subject. These lectures are of considerable use at the time, but they are often of still greater use afterwards. At the time their chief value consists in leading the students to think about their future duties. But they do not seem generally to add much to the immediate professional training. Students in colleges where these lectures are very poor are often quite as good class-teachers as those in colleges where these lectures are more than usually good. But after the students have left the college, and entered upon the work of their calling, they often

find their notes of these lectures acquire an increasing fulness of meaning with the increase of their own experience. I have repeatedly been told by schoolmasters that they had never fully understood the normal lectures until they had begun to work in schools of their own, and that their old notes had then become of the greatest value in guiding all their labours.

Most directly practical lectures best.

The goodness of these lectures depends in general on their practical character. They are of comparatively little use when they are taken up with psychology, and attempt in the short time that can be allotted to the subject to instruct students quite unprepared for it in that abstract and difficult science. Of course, it cannot be denied that in psychology are to be found the ultimate principles of the art of education. But the practice of such an art is separated from the ultimate principles by so wide an interval that it would be quite vain to expect students in training colleges to deduce the one from the other. The most experienced normal masters have already seen and avoided this mistake. But even they might, I think, still further improve their work by becoming even more practical than they are.

The best lectures that I have heard have always been on the methods of teaching particular subjects, such as reading or arithmetic; and the rules given were always characterised by clearness and good sense. But in examining the students as I did this year, to ascertain their knowledge of such methods, I did not find in any instance that precision and definiteness which is needed for perfect practice. I examined the students, for instance, in their methods of teaching subtraction. I found them sufficiently well acquainted with the steps to be taken, though not quite so certain of their own knowledge as men are who have mastered their subject; but I did not find anywhere a knowledge of the precise limits of each step; when I asked what sort of sum in subtraction children would find easy, and what sort they would find difficult, the question was evidently new. Yet the knowledge of these apparently minute details is what really distinguishes the artist from the amateur. A knowledge of the general outline of a method is an excellent thing. But if the students know no more than the general outline, it follows that they must learn the details in the schools which they are sent to teach, and for some years after they have left the college, the children in those schools are the sufferers. However unavoidable this may be, in many respects, it can and ought to be avoided in work so definite by nature as the teaching of arithmetic.

Proper subject of such lectures is model school.

I do not think, however, that in a well arranged training school lectures of this kind, that is, lectures on the methods of teaching arithmetic or grammar, ought to fall within the pro-

vince of the normal master. The best arrangement would be that every lecturer should be a master of method for his own subject, devoting, perhaps, one lecture out of every seven or eight to this work. The proper subject of the normal master's lectures is not the method of teaching this or that, but the school considered as a whole. The unit in his mind ought to be, not the child, still less the matter to be taught, but the school. The model school ought to be taken as the specimen. He should dissect it, explain its rules and their operation, give reasons for all its details, and point out under what circumstances those reasons would cease to apply. The model school should be made, in Mr. Moseley's words, "the representation of the most advanced state of elementary instruction." While "placed on the footing of an ordinary elementary school" it should offer "the most perfect type of such a school." Thus maintained in its fullest efficiency it should be treated in the normal lectures as the map is treated in a lecture on geography, or the body in a lecture on anatomy. It should not merely be referred to from time to time as illustrating important principles; but rather the principles of the art of teaching should be taught in reference to it. The building and all its parts, the arrangement of the desks and furniture, the organization and classification, the time-table, the books, copy-books, and apparatus, the registers, the fees, the discipline, and methods of punishment, all these should be noticed, explained, and justified. Within the limits of such a course of lectures the methods of teaching reading, writing, and spelling would, of course, be comprised; but grammar, arithmetic, geography, history, and the like, the normal master would leave to the lecturers on those subjects, only dealing with them indirectly as parts of a larger whole. The model school should be treated as the type which the students were hereafter to copy, and the whole labour of the normal master should be to give them such a thorough knowledge of its entire mechanism, and such facility in setting that mechanism to work, as will enable them to copy it with success. To do what they have have seen done is within their powers. To deduce from abstract principles of teaching the particular rules applicable to a given case is generally quite beyond their reach till after years of unsuccessful attempts.

Even where it is impossible to free the lectures of the normal master from the methods of teaching particular subjects, the discussion of these methods should still be made quite subordinate to the complete dissection and explanation of the model school. At present the normal masters give one course of lectures on the method of teaching reading, another on the method of teaching grammar, and so on for

other subjects of instruction. The students are then expected to combine what they have learnt and apply each method as they need it. This is as if a surgeon should consider it enough to study comparative anatomy, and leave himself to discover in actual practice the particular anatomy of the human body. The result is, that teachers are sometimes to be met with in elementary schools who know everything about the methods of teaching, except how to use them; and this result will always be possible till the normal lecturers fully realize that their business is not to teach the science of education but the art of the schoolmaster.

Important position of normal master.

With all these duties to discharge, and with so much to answer for, the normal master ought to fill an important place in every training college, and it is desirable to encourage the most skilful and experienced men that can be obtained to undertake the office. I do not know any better way to give this encouragement than by adding "method" to the subjects for which an augmentation of salary may be awarded under the Minute of August 1853.

Proposal to allow augmentation of salary to normal master as lecturer on method.

The qualifications of such a lecturer ought not to be tested merely on paper. Indeed, I am strongly of opinion, that it would be better in future to require previous proof of skill in lecturing from all candidates for augmentation of salary under that Minute. The annual payment of the augmentation to successful candidates is indeed already made conditional on a favourable report from Her Majesty's Inspectors after each visit of inspection. But to require such a condition after the examination has been passed is obviously very different from requiring it before the examination is permitted; in the one case, skill in lecturing is practically made subordinate, in the other case, indispensable. But whether or not it be expedient to require such proof from candidates who propose to lecture on subjects like history or geography, to a lecturer on method practical skill is so absolutely indispensable, that it should occupy a very prominent place among his qualifications, and be tested by stringent trials. No candidate ought, I think, to be admitted to an examination in this subject who has not held the office of normal master for at least two years, and has not proved his skill both in his management of the model school and in his lectures to the students. The model school may sometimes fail for no fault of his; but, if so, the responsibility must rest with the college authorities, since the Committee of Council plainly cannot recognize a lecturer who is not supplied with the essential requisites for the discharge of his duties.

With respect to the subjects in which candidates for a lectureship on method ought to be examined, I addressed a

circular last autumn to the principals of those colleges which it is my duty to inspect. I have received from several of them very full answers, stating what kind of knowledge they considered to be essential to such an office. I have also obtained, through my colleagues, similar communications from some of the training schools not in connexion with the Church of England.

Subjects in which lecturer on method should be examined.

The requisites suggested in these letters may be put under four heads; namely, a knowledge of—

1. The science of education.
2. Different systems and methods of teaching.
3. The history of education.
4. The present state of education, especially in this country.

I. Science of education. Examination should be confined to logic.

The examination in science I should recommend to be confined to the subject of logic. I do not think it would be advisable to encourage a study of mental or moral philosophy. One of the principals, to whose opinion I attach very great weight, says, with reference to this point—

"I much doubt whether good would result from giving any direct encouragement to the study of modern systematic works on mental science. Not only is the matter which they contain bearing on education meagre and unpractical, but, if I am not mistaken, it is generally false. I must, indeed, state that the works in question seem to me more likely to be mischievous than beneficial in reference to the end proposed. I have not known a single practical teacher who has given himself up to the study of them who has not appeared to be the worse—not the better—for his pains."

With the conclusion at which this gentleman has arrived, I agree. Mental science is in general too abstract, too far removed from all practical applications, to be of much real value to a normal master. It belongs to a region of study into which it would be quite hopeless for him to attempt to take his pupils; its very phraseology implies an amount of collateral knowledge far beyond their reach, if not beyond his own. I have already remarked that lectures on method are almost always of little value when the lecturer attempts to include the teaching of psychology. Such lectures have the appearance, without the reality, of systematic completeness, and divert the attention of the students from the proper object of their study, the facts exhibited in the model school.

These objections do not, however, apply to the science of logic. That science is short, definite, and capable of being completely mastered by itself. As a discipline it would be invaluable to a lecturer on method, and it contains nothing that would be likely to mislead. I think that candidates for this lectureship might be required to show a thorough knowledge of some short text-book, such as "Morell's Hand Book," or the "Translation of Aldrich," and should also have read Whately, or some similar work, as a commentary.

II. Systems and methods of teaching. Certain books to be required, and an acquaintance with best elementary schools.

The different systems and methods that have been tried, with greater or less success, both in this country and elsewhere, ought to form the chief staple of a Normal master's theoretical knowledge. The Council Office Book List contains a number of manuals from which I think it not difficult to select some that would form a very proper basis for an examination under this head. Some others have also been suggested to me by the principals of the training colleges. I should recommend that every candidate be required to have read and mastered the books named in the following list:—

- Ascham's Schoolmaster,
- Milton's Letter to Hartlib,
- Locke's Thoughts on Education,

  } Reprinted in two volumes by C. Knight, under the title of "The Schoolmaster."

- Dawes' Suggestive Hints.
- Dunn's Principles of Teaching.
- Mann's Educational Tour.
- Richards' Manual of School Method.
- Short's Hints for School-keeping.
- Stowe's Training System.
- Wood's Sessional School.

Of these, the three first mentioned are by classical English writers, and, as has been remarked to me, may be considered to represent the thoughts on education characteristic of the sixteenth, seventeenth, and eighteenth centuries. The others are named as authoritatively describing systems now in use. The examination should be such as to test whether the candidate had thoroughly mastered the distinctive principles and features of each. Any one of these books merely got up by rote would be but a poor acquisition; they must rather be considered as abstracts or sketches to be filled up by a lively knowledge of the systems in their operation.

To the above list I would add the following, from which candidates might select at their option:—

- Bacon's Advancement of Learning.
- Richter's Levana.
- Edgeworth's Practical Education.
- Abbott's Teacher.
- Sullivan's Popular Education.
- Craig's Philosophy of Training.
- Tate's Philosophy of Method.
- Hughes's Philosophy of Education.
- Bell's Manual of National System.
- Lancaster's Experiments in Education.

Candidates who are acquainted with French or German might also be examined in—

- Overberg's Manuel de Pedagogie.
- Braun's Cours de Methodologie et Pedagogie.
- Jacotot's Enseignement Universel.
- Denzel's Einleitung in die Erziehung's and Unterricht's-Lehre.

But I do not think it would be sufficient to require that a lecturer should have studied systems and methods in books only; he should also be well acquainted with the actual

working of these systems as far as such a knowledge can be obtained without requiring unreasonable labour. He should have personally visited not fewer than half a dozen of the most successful elementary schools in this country, and should be prepared to give a clear account of the methods pursued in them, and of the probable causes to which their success is due. If he were required to state the schools which he had thus visited, a careful report on one of them might very properly form a part of the work to be done at his examination.

III. History of education. Allowed but not required.

A knowledge of the history of education has been suggested as a requisite qualification by several principals, and it would certainly be very useful. It is a great help to the thorough comprehension of systems and methods to know the circumstances and antecedents out of which they arose. I do not think, however, that this point could be insisted on, but candidates might be encouraged to study the subject, and permitted to include it among those in which they proposed to be examined. A complete treatise on the history of education does not exist in English, but the various biographies of men distinguished for their labours in the field supply a substitute. If a precise knowledge of the birth and growth of systems cannot be so obtained, yet, at any rate, much light is thus thrown on their true nature; and the study of every subject gains life and power by being associated with that of the biography of its great men. Such books as Stanley's Life of Arnold, the Life and Methods of Fellenberg, Raumer's Life and System of Pestalozzi, or Biber's Memoir of Pestalozzi, might very properly be studied by normal masters. And those who were able to read German, might propose to be examined in Raumer's History of Education.

IV. Present state of education. A knowledge of Minutes to be required, and of Reports for two years past.

The remaining qualification that has been suggested, namely, a knowledge of the present state of education, is, I think, essential. Every candidate should be required to be well acquainted with the Minutes of the Committee of Council, and with their practical operation. Now that these Minutes have been printed separately in a single volume, there can be no difficulty in procuring the materials for such a study. These Minutes are at present a code of laws regulating the great mass of educational operations; and it is obvious, that a great part of a normal master's rules for the guidance of the future labours of his pupils will be useless, unless adapted to to the law under which they are to work. To a knowledge of the Minutes, as containing the law, should be added a knowledge of the reports of Her Majesty's Inspectors for the two or three years preceding the date of the candidate's examination. These exhibit the circumstances to which the law is to be applied, and a knowledge of them enables the normal master

to give more reality to many of his lectures by pointing out the different educational requirements of different parts of the country, and the modifications to be, therefore, introduced in many details of management. To the Minutes and the reports, candidates might be allowed to add other writings dealing with the same subject. And those who could read French might be examined, if they wished it, in Eugene Rendu's Account of Education in England and Germany, or Cousin's Reports on Education in Prussia and Holland.

The plan that I have sketched for examining candidates in the subject of method could not present any real difficulties, and would secure such an amount of definite knowledge as to justify the Committee of Council in putting the subject on a level with those to which special encouragement has been given by the Minute of 1853. Such encouragement is much needed, and if admission to examinations were made conditional, as it might be, on the success of the model school, there would be a strong inducement to the authorities in charge of the training schools to pay great attention to what is at present the weak side in many of these institutions.

Special must not displace general instruction in training schools.

I have thought it my duty in this report to confine my attention almost entirely to a single point, believing that a great improvement is wanted here, and that no time ought to be lost in preparing the way for it. But I must not leave the subject without guarding against the supposition that I should advocate the displacement of any part of that general education which the students in training colleges now receive, in order to make room for a special and professional system. If the choice lies between a purely general and a purely special training, there cannot in my mind be any doubt that the former is to be preferred. It is of far more importance to a schoolmaster that he should have that knowledge and that cultivation of faculties which it is his duty to communicate to children, than that he should know how to communicate them; the power of teaching he may gain by practice and experience; knowledge and cultivation it is almost impossible for him to gain when he has once commenced the duties of life; he has neither the time nor the opportunity, nor, within a very few years, the necessary ductility and elasticity of mind. If a man is to be a teacher, the first requisite is, that he should have something to teach. Indeed, it is the experience of all who have carefully observed, that he must know a good deal more than he is required to teach. There are occasionally to be found men who have a peculiar gift, not exactly of teaching, but of making children learn, and in schools conducted by such men we see the strange result, that the scholars know more than their master, and yet owe all their knowledge to

Good teachers of poor attainments mere exceptions.

his guidance of their learning. But such cases are exceptions, and rare exceptions. In far the majority of cases, a man who has learnt "a system," and learnt nothing else, is rapidly worn out as a teacher. He succeeds well for a short time; but his defective knowledge is gradually detected, his whole ingenuity is exerted to make a little go a great way, he loses self-respect, and with it in no long time the respect of the boys, a tradition of his ignorance grows up among the elder children, and his school and his reputation die together.

To lower standard required for certificates would be suicidal policy.

No mistake would, I believe, do more harm to the cause of education than to lower in any degree the standard of attainment now required for a certificate of merit, or, what is precisely the same thing, to give the advantages now dependent on that certificate to masters who had not obtained it. Such a change would possibly enable a few places that are at present shut out from your Lordships' grants, to avail themselves of the aid which these grants offer; but your operations would thereby gain in quantity at the expense of quality, and the gain would bear no proportion to the loss. At present, whatever has been done is tolerably sound. The fact that a school is aided by the public money, now implies a fair standard of education for the children and pupil-teachers, and a fair standard of local interest and local exertions on the part of the managers. It may be true that there is still much to be done, and that the work does not spread over the country with the rapidity which all benevolent men would wish to see. But a fair degree of efficiency in the aided schools is at present maintained; maintained by great and praiseworthy efforts to fulfil the conditions on which the grants depend. If those conditions were relaxed in any degree, a large number of those schools would rapidly sink to the lower level. To purchase greater rapidity of extension by such a loss of efficiency and local exertion would be suicidal.

Standard certainly not too high.

For it cannot be maintained that the present minimum standard is too high. On the contrary, the pupil-teachers in not a few instances get the barest justice. Some of them enter the training schools so deficient in elementary knowledge of grammar and arithmetic, that it is necessary to put them through a special course before allowing them to attend the regular college lectures. And even those who are not deficient in attainments are very often so deficient in all true cultivation and development of faculties as to unfit them for obtaining the full benefit of the training through which they pass. All this is, I believe, slowly improving; the pupil-teachers appear to do better every succeeding year, and every improvement of course prepares the way for another. But the material from which our schoolmasters is to be made is

still very far from having attained a high standard, and anything which allowed that material to deteriorate would be an irreparable loss. This, however, would be the inevitable effect of granting certificates to a lower scale of attainments than has been heretofore required. In so far, in short, as the choice lies between giving the students in training colleges substantial knowledge and cultivation, and giving them a better system of teaching and managing children, the authorities of those institutions have done quite rightly in preferring the former; and if they had not brought this part of their work into a tolerably efficient state, it would not be wise to call upon them to give attention to anything else.

But improvement in method certainly need not now imply any loss in other respects. It is not (in most colleges) more time that is required to be given to this subject. I doubt whether the students require more lectures on method than they now have, or more time to be spent in the practising school. The change required is one that ought not in any degree to lower the present standard of general knowledge or culture; namely, that the subject of method should now begin to pervade all the work throughout, that the lecturers should always be conscious that their hearers are meant to be teachers, that the work in the practising school should be arranged so as to supply real study of the art and not mere blind practice, that models of the best methods should be constantly before the eyes of both students and lecturers.

I believe that all this is within reach, though it may require considerable effort to reach it, and I believe it to be well worth all the effort that it will require. And this is not merely my own opinion, formed after a single visit of inspection to each training school. It is also the deliberate opinion of my predecessor in office, repeatedly expressed in his Reports, and urged upon myself in conversation. And, on a point of this nature, his long acquaintance with education generally, and with the training schools in particular, must rank him among the first authorities. I believe too, that the principals of the training colleges would generally concur in the tenor of this Report, and only need your Lordships' encouragement to make every effort to introduce such improvements as have been described.

I have the honor to be, &c.

F. Temple.

To the Right Honorable
The Lords of the Committee of Council on Education.

REPORT *on the* CHURCH OF ENGLAND TRAINING COLLEGES *for* SCHOOLMISTRESSES, *by Her Majesty's Inspector of Schools, the* Rev. F. C. COOK, M.A.;—*for the Year* 1856.

MY LORDS, March 1857.

THE condition of the training colleges for female teachers has not undergone any material change since I presented my last report. These institutions are in a steady and progressive state of improvement. The demand for trained teachers is unabated, and so far from finding any difficulty in obtaining situations, nearly all managers agree in asserting that the supply still falls far short of the annual demand. The organization is becoming more complete and efficient. The results of the last examinations prove that the intellectual training is generally in a satisfactory state, and in some instances that it has reached quite as high a standard as might reasonably be expected or desired. Considering the short time that has elapsed since the first training colleges were established, the entire novelty of the whole system, which had no precedent in this or in any other country, the misgivings so long entertained even by the most ardent friends of education as to the possibility of training a large number of young women for duties requiring so much energy and strength both of mind and body, as well as intelligence and soundness of moral principle, it is assuredly a matter of astonishment, as well as of just congratulation, that success, so generally recognized and established by unquestionable facts, has requited the exertions and justified the anticipations of those by whom these institutions were founded and are now conducted.

The external circumstances of the training colleges, so far as regards the number of the students at present in residence or already trained in them, is shown by the following table, which corresponds very nearly with that which I submitted to your Lordships in last year's report:—

	Accommodation for	In Residence Lady-day 1856.		Left between Lady-day 1855 and Lady-day 1856.		Admitted between Lady-day 1855 and Lady-day 1856.		Total Number trained since first Establishment.		Date of Establishment.
		Queen's Scholars.	Other Students.	Queen's Scholars.	Other Students.	Queen's Scholars.	Other Students.	Queen's Scholars.	Other Students.	
Bishop's Stortford -	60	12	30	16	5	—	18	27	11	1852

Norwich - - -	40	7	7	4	4	6	5	14	11	1853
Salisbury - - -	56	8	45	17	16	5	30	41	270	1847
Warrington - -	84	22	51	16	13	23	34	62	293	1844
Whitelands - -	110	94	11	40	11	55	3	120	311	1841
York and Ripon -	28	11	9	10	13	8	11	14	97	1846
Total -	783	253	346	179	176	148	222	465	3,989	

Comparing these results with those recorded last year, I find:—

1. An increase in the accommodation, 767 to 783. This is owing chiefly to the addition of dormitories at Whitelands and at the Home and Colonial institution. At present one new institution is nearly completed at Durham, which will receive 30; another is projected at Truro, which is intended for a like number. When these institutions are full, which will probably be the case in a few years, supposing that the students generally remain two years in training, the annual supply will exceed 400. Last year 355 were sent forth.

2. I observe with regret a decrease in the number of Queen's scholars from 290 to 253. The training schools at Bishop's Stortford and Brighton had no Queen's scholars; Derby, Cheltenham, and Bristol and Gloucester, had 16 less than in the preceding year. The other institutions had a small increase, and Whitelands admitted 55, being an increase of 19.

Subjects of report.

In this report I propose to record the observations made by myself and my colleagues, the Inspectors of the districts in which the several training colleges are situate, upon the following points:—1. Their organization, with especial reference to the number, duties, and character of the officers. 2. The moral and religious influences by which the feelings, principles, and habits of the students are moulded and developed. 3. The circumstances which affect their bodily health and strength. 4. Their opportunities of acquiring a thorough and practical knowledge of their professional duties. 5. The course of instruction and proficiency of the students. 6. The financial circumstances and prospects of the training schools.

Organization of training colleges.

1. In last year's report I entered at some length upon the most prominent considerations which affect the efficiency of

the organization of training colleges. I have since had many occasions to discuss those points, and to ascertain the opinions of local managers. The subject is of so much importance that I feel myself justified in repeating some observations and adding some facts which may serve to illustrate and sustain them. There is no point upon which I entertain a stronger conviction than that the position of the superintendent should be one that may make her authority paramount in all matters of internal discipline and administration. In large institutions it is desirable that a general control over the education, the mental and professional training, should be exercised by the clerical secretary, who is the natural and best medium of communication with the board of management and with all correspondents. In that case the best arrangement is undoubtedly that which has long been tried and found to be most successful at Whitelands, where the chaplain and superintendent carry on their several departments in perfect harmony, and where the duties and authority attached to each department are accurately adjusted. The same principle has been adopted at Bristol, and with some modifications in other large training colleges. When, however, the institution is not large enough to require independent officers occupying these two positions, I entertain not the least doubt that the whole weight of authority should be assigned to the superintendent. The question has often arisen, and, when a change occurs, is often likely to arise again, whether the chief governess or the superintendent should be regarded as the principal officer, whether they may act as co-ordinates, or whether they should equally be subordinated to an acting committee of management? I believe that most managers are now inclined to adopt the view which the observations of the last few years have fixed upon my own mind, that there is but one safe solution of the difficulty. The governess cannot attend to her special duties of acquiring and communicating knowledge and at the same time exercise an efficient and unceasing control over the personal conduct of the students; her duties occupy all the time not absolutely required for rest and recreation; they are scarcely compatible with the stress upon the moral feelings and the sense of responsibility inseparable from the charge of household discipline. It is possible that young women accustomed to look up to their governess as their principal mistress may be stimulated to mental exertion and obtain a comparatively great success at any competitive examination; but the paramount object of training is to mould the character into accordance with those principles which regulate the lives of good mothers of families, to give a thoroughly practical tone to their habits and thoughts, and that object can scarcely be attained excepting in

establishments where the person charged with the household management and moral discipline is recognized as the true head.

Establishment of teachers required for training.

With reference to the organization of the teaching power, my chief object this year has been to ascertain what number of officers are practically required to do the work efficiently and with ease. Liberality in the appointment and remuneration of teachers is the only wise policy. On the mere ground of economy it is indispensable that a sufficient number of teachers should be appointed. Most of the failures at the Christmas examination, and therefore most of the losses of annual grants, are caused by defects in written papers, attributable to the want of careful revision of written exercises during the period of training. Unless there are sufficient lecturers to teach each subject thoroughly, and sufficient governesses to see that the work is thoroughly got up, no amount of ability or exertions will secure satisfactory results. From various circumstances which came under my notice of late, I have become convinced that the proportion of governesses ought to be increased in some institutions. Where the number is not a good deal above what was formerly regarded as sufficient, very serious consequences have ensued. I have sometimes found the health of earnest and able teachers undermined, a general condition of nervous excitement pervading the institution, and a series of distressing struggles and failures occurring just when great success was anticipated; and on close inquiry I have ascertained that the whole time of the teachers was absorbed in their daily work, in giving and preparing lectures, and in revising the papers of the students. In more than one institution, last year, I brought the subject formally under the notice of the managers, and in every instance satisfied them that, in justice to their teachers and students, and with due regard to the financial circumstances as well as the general efficiency of their establishment, they ought to engage at least one additional teacher without any delay.

Governesses.

As a general rule, I am satisfied that it is expedient to increase the number of governesses, rather than to introduce more male lecturers. It may certainly, at present, be easier to find men who can teach grammar, arithmetic, and give able lectures; but the supply of well-educated young women from the training colleges is continually increasing, and I have not heard any lectures on method, on English history, or on grammar more thoroughly adapted to the requirements and capacities of students than those given by the governesses at Whitelands, the Home and Colonial School Society's, Salisbury, Derby, Warrington, Cheltenham, and Brighton. For my own part I feel that a very considerable superiority in attainment

on the part of a male professor would scarcely compensate for the diminution of womanly influence pervading the whole institution. A girl's habits and tone of mind are influenced to an extent which can scarcely be appreciated by the preceptor under whom she is placed at the dawn of womanhood. She is to be a teacher of girls. The formation of womanly habits is the first great object of all her training. Every lesson which she receives from a good governess gives a more feminine tendency to her mind. It is an encouragement to her to see how thoroughly the subjects she has to learn can be mastered by a woman's mind. It moves her to a rational emulation. She listens to a master with a feeling of admiration, derives undoubtedly great benefit in an intellectual point of view from such lectures, as I have often described in former reports; but he is not and cannot be, properly speaking, a model which she can safely imitate. What is becoming in the male professor might be almost unpleasing in a young woman. I have sometimes remarked that a masculine tone has been caught, or that an artificial manner has been produced in the attempt to imitate the lesson even of an able and intelligent preceptor. The following points appear to me to be most essential in the present circumstances:—

1. In every institution an accurate account should be kept of the duties of each governess; the number of hours occupied daily in giving lessons and correcting exercises, and in other ways conducting or superintending the education of students. The managers should not be satisfied unless it is clearly proved that she has ample time to do all those duties leisurely and thoroughly, and also to take needful rest and recreation, and also that she has sufficient opportunities of acquiring information and collecting materials for her daily lectures.

2. Since the position even of the chief governess, for reasons already adduced, is not and ought not to be superior to that of the superintendent, or independent of her authority, it is most important that everything should be done to make her thoroughly at ease, to free her from needless anxiety, and to treat her with due consideration. Her salary ought to be liberal, her apartments commodious and well-furnished, and her liberty as great as may be compatible with the orderly working of the institution. She should be saved as much as possible from interference on the part of the superintendent, and the limits of her authority over the students should be clearly understood and subject to no infringement. Unless these principles be carefully kept in view, there, is a great probability of open dissension or secret heartburnings between her and the superintendent, and results highly detrimental to the best interests of the institution are not unlikely to ensue.

3. I have long been of opinion that the governesses ought to form a distinct class. At present they are precisely on the same footing as other certificated teachers. They receive the same augmentation of salary on the same conditions with reference to their payment by the managers. I believe that it would be advisable to attach some peculiar advantages to the office. If the maximum of augmentation were raised to 30*l.*, and the minimum in proportion, I believe that it would act most beneficially. At present I do not find that first-class students always look upon the situation of a governess as the most advantageous which they can obtain. They may, of course, be actuated partly by the desire of greater freedom as schoolmistresses; but the chief cause of their disinclination is that they do not see that this position is, as it ought to be, one of marked and unquestionable superiority. The honorary distinction of a separate class, combined with some increase of augmentation, would, at least, lead to the recognition of this fact, and give managers greater power in the selection. I would not, as at present advised, attach any condition of special examination for admission to this class; but I would recommend that an application should be made by the managers after a probation of at least one year, and that the ability of the governess should be specially reported on by the Normal College and District Inspectors. Such a rule would compensate the female training colleges for their practical exclusion from the benefits of the Minute attaching considerable pecuniary advantages to professorships; a system which, as may appear from the foregoing observations, is not, in my opinion, either necessary or desirable in the generality of these institutions.

Chaplains.

My observations as to the expediency of increasing the number and influence of the governesses, in preference to introducing more male lecturers are, of course, not intended to apply to the chaplains. The relations between a clergyman and his people, male and female, are natural, permanent, and thoroughly understood. They will continue throughout the life of a schoolmistress. They will prepare her for the duties of her position, wherever she may be placed. I have, indeed, good reason to know that, in institutions where the funds have not enabled the managers to secure the services of a chaplain, the religious instruction has been admirably conducted by the superintendents and governesses; but it is not advisable to make such an arrangement, excepting in cases of necessity. Even where a fair allowance cannot be made to a chaplain, it generally happens that the work is undertaken almost or quite gratuitously. In fact, some institutions at present have the advantage of most able and watchful superintendence by clergymen, who are most inadequately paid, or

who receive but a nominal remuneration for their labours. It is, moreover, in my opinion, a good plan for the chaplain to undertake the duties of secretary and general superintendent, and, provided that he has leisure, and is practically conversant with educational matters, to hear and criticise the lessons of the students.

Religious and moral training.

2. The religious and moral influences of the present system upon the character and habits of the students must always constitute too important a subject for consideration to be passed over with a slight and cursory notice in any general report. I have, however, little to add to the very full remarks which I had occasion to make last year. I have reason to believe that the apprehensions once entertained by no small number of the best friends of education are nearly, if not altogether, removed. It has not been found that the tendency of the training colleges is to foster self-conceit. The students most remarkable for mental attainments are generally among those upon whose firmness of moral principle, and clear perception of right and wrong, most reliance is placed by the principals. It has, most undoubtedly, been the especial and paramount object of all those by whose exertions these institutions have been established and by whose liberality they are maintained, to train a race of intelligent and well-informed young women in habits that will make them trustworthy agents in the great work of raising the character and improving the moral and religious condition of the working classes. I do not believe that any one influential person connected with these institutions has allowed any other object to interfere with this. The intellectual, even the professional training, is invariably represented, and, I am quite convinced, is also invariably felt to be valuable only so far as it conduces to this result. These views of the founders and managers are entirely adopted by the persons who are especially responsible for the accomplishment of the work. The chaplain and the superintendent represent to the students and effectually impress the great principles of religious discipline and domestic order; an effect, as I have already had occasion to observe, enforced by the subordination of all other officers who are chiefly occupied with their instruction. I do not mean to say that more may not be done to promote this tendency. There is certainly much difference between training institutions as regards the habits of the students. In some instances there is a peculiarly quiet and unaffected tone pervading the establishment. The girls are remarkably devoid of affectation and pretension, their dress is simple and becoming, and there is reason to believe that they will instinctively refrain from those habits which, if not in themselves morally wrong, are

noticed as indications of bad taste and forwardness by school managers. But I can safely affirm that in no one training school are the gross faults of affectation, dress unsuited to their station, self-conceit, and presumption consciously tolerated. The superintendents are especially aware of the mischief and danger of such tendencies, and spare no pains to correct them.

Domestic training.

I am of opinion that more may be done generally to improve the domestic training. In some few institutions nothing is even attempted; in others little time and attention are given to the matter. In those where most is done, it is questionable whether all the students do acquire clear notions of housekeeping; whether they will all be able to manage their own domestic affairs with prudence and good sense; whether they will teach the principles of household economy with much practical effect in their schools, and train their pupil-teachers to be good managers. The value of the training which would secure such results cannot be overrated. While, however, it is a subject to which public attention is fully awakened, and upon which the strongest opinions are entertained by persons of high rank and commanding influence, I feel bound to express my belief that it has not yet found its right place in our system of female training. More time ought to be given to the work. The arrangements for learning every kind of domestic work ought to be as complete in every institution as they are now in a few only. There may be some difficulty in adjusting the time table, and in providing a sufficient variety of occupations, and bringing all details of housekeeping under the notice of the students, in superintending them when so employed, and combining rational explanations with practical instruction; but such difficulties ought to be met and overcome at any cost of time, trouble, or expense. I regret that the suggestions upon these points which I offered in last year's report, though generally approved by managers and superintendents, have not been adopted, excepting at the Home and Colonial institution. I am almost disposed to think that it may be necessary to introduce some modification into the system of examination, if after some further trial it is found that teachers trained in these institutions are generally deficient in the essential qualification of domestic skill.

Needlework

With regard to needlework, I have to report favourably upon the general progress. It was formerly a common matter of complaint that little attention seemed to be paid to this part of a teacher's work; but the system, which was adopted some years since on my recommendation, has given general satisfaction. The students are all aware that their work will be examined carefully by professional needlewomen, and that their places on the class list will be materially affected by

their success or failure. This year I introduced a plan suggested by Miss Burdett Coutts. In addition to specimens of every kind of plain work, each student cut out in paper a model of some portion of dress, such as she would have to prepare in school. These models were afterwards examined and marked. Several of them were excellent, but the differences were greater than in ordinary sewing. I am informed that this addition to the examination is much liked by the superintendents, and will probably have a good effect upon the students.

General character of present course of training.

I cannot dismiss the general subject to which these remarks on such truly feminine qualifications are appended, without stating once more my strong conviction that the religious and moral training is in all these institutions of a really practical and efficient character. What young women in this, or in any other country, have, as a class, had such advantages? Nearly all of them were selected at a very early age as intelligent and well-disposed children; from year to year during the period of their school life and apprenticeship they have received regular certificates of good conduct in and out of school; they have been educated by teachers possessing the full confidence of the most earnest promoters of religious improvement; they have not been withdrawn from those domestic influences for which no system of common education can ever compensate; but they have, for the most part, passed all the years of childhood and youth in the bosom of their own families, and, after such a period of trial and probation as very few indeed have passed through, at the critical time of their transition to womanhood they are placed in institutions where the development of their higher mental faculties is carefully blended with sound instruction in religious principles, and the inculcation of all habits that characterize a Christian woman.

Health of students.

3. The next subject which I have to discuss is very nearly connected with these considerations. It is a very grave question, secondary only in importance to that of the spiritual and moral condition of the students, whether their employments are such as may either promote, or at any rate not interfere with their physical development—whether they are likely to be healthy, strong in body, active and energetic in habits, physically as well as mentally qualified to discharge their onerous duties with success. There is certainly an impression, that both during their apprenticeship and the period of their training their minds are overworked, that they have not sufficient time and opportunities for exercise and recreation, and that their bodily health has suffered and now suffers in consequence. These questions have been present to my mind at the inspection of every training

school. I never forget that all other objects, all mental attainments, all professional ability, all, save and except the formation of a religious character, are subordinate to this. If there is not time to train and educate them without infringing upon the time required for exercise and rest, their education and training should be modified. Some subjects, whatever may be their intrinsic value, must be discarded. At whatever cost time *must be found for this.* This feeling, as might be expected, is also generally entertained by committees of management, by the superintendents and chaplains, and is never appealed to ineffectually by the medical attendants, whose presence at the annual conferences I always welcome, and would, if authorized by your Lordships, explicitly invite. Is the impression a just one? Is it sustained by facts? Is it a mere inference from the apparent difficulty and extent of the annual examination, or from a few exceptional cases of weakly organized and unhealthy individuals, whose failure has excited the sympathy and apprehensions of their friends and patrons? I will endeavour to answer these questions fairly. In the first place it must be remarked, that most of the external conditions of health are found in the training colleges. The rooms in which the students take their meals, learn their lessons, and sleep, are spacious, well ventilated, and sufficiently warmed. To nearly all the colleges a piece of ground is attached, in which they can take exercise and enjoy some recreation. Their diet is plain, abundant, and carefully regulated with reference to their age and habits. They rise early, and retire to rest at a fixed hour, after which they cannot have any light. The portion of time allotted for lectures, private study, meals, exercise in and out of doors, domestic work, &c., is accurately determined, and at regular periods brought under the consideration of the committees of management. It forms a prominent subject of discussion at the annual conferences with the Inspectors. If we reflect on the causes which so often impair the health of students, we cannot but be aware that late hours, irregular habits, and sedentary occupations, are far more injurious than the mental excitement which, to a certain extent, is inevitable, when the prospects of after life are so materially affected by success or failure. The whole of these causes, except the last, are entirely removed in the case of these young women. I cannot but think that, when the regulations so carefully made are duly observed, when the superintendent exercises a proper authority and prevents the governesses from imposing more work, or exacting more exercises than can be produced by the students within the time daily allotted for intellectual culture, the health of students upon the whole ought to

be at least equal to that of any class of young women in the country. This, indeed, I have ascertained, is really the case in the large metropolitan institutions, which of course are not in more advantageous circumstances than those in the country. The medical attendant at Whitelands expresses his astonishment at the small number of cases of bodily disease, and states that the per-centage of even slight complaints falls far below the average to which young women between nineteen and twenty-one are elsewhere liable. The students are really in the enjoyment of a high state of bodily health and strength. The impression, however, does exist that failures of health are not uncommon, and that they are attributable to the system. I believe that this is simply because a few cases occurring at intervals in various parts of the country excite a good deal of attention. When a young girl, who has won the affection and esteem of the leading persons in a parish, returns home with shattered health and finds an early grave, it is natural to attribute the calamity to the system under which the seeds of disease have been fully developed. But inquiries have convinced me that, in nearly every such case, the constitution had been seriously, even irretrievably, injured before the date of entrance. Parents and friends are sanguine, and medical attendants far from being sufficiently scrupulous in signing certificates of health. Of course, a young woman whose lungs are affected, or whose constitution is undermined, is not likely to go through the period of training, or afterwards to take charge of a school, without breaking down. The only remedy is a searching, and even a severe, inquiry on the part of the colleges, and a rigorous determination to refuse any doubtful cases, or to send away any young person whose strength is found to be unequal to the duties of her position.

Practical training.

4. Next in importance to these subjects is the practical training in the art of teaching. This has always formed so prominent a feature of my reports, that I should not feel it necessary to say much this year, had I not reason to apprehend that justice is scarcely done to the managers and professors. It seems to be admitted, that the theoretical instruction in the art of teaching has been much improved, and is now, generally speaking, very good. It certainly is the case. Considering that the whole subject of elementary instruction on scientific principles is entirely new, that the normal schools for mistresses had no precedents whatever for their guidance, and that no English works of any authority had been written on the subject, it is a matter of surprise that the lectures prepared by the teachers of method in all the training colleges should be so complete and systematic. My colleagues, who

always hear some of the lessons and examine the course of instruction, have concurred generally in this opinion. So far as this part of the work is concerned, I feel myself justified in asserting, that the system has already achieved a great success.

Organization of practising and model schools.

The practical teaching, however, depends mainly upon the organization of the work done in the model and practising schools. Each student ought, of course, to know how to arrange a school-room, to distribute the teaching power, to allot the right proportion of time to every subject of instruction, to be conversant with the best method of teaching every subject, and to have the art of governing and influencing children. All this she should know, not merely as a science, but, as an art. She should not only know how and why it is done; she should be able to do it. The question is—how far all this is practicable, and how far what is practicable is effected or attempted. I believe that it is practicable to acertain extent where there is a good practising school; to a still greater exent where there is also a good model school accessible to the students. Nearly all that I have here described can be done, provided that the lecture lessons are carefully prepared so as to explain the work done in the schools, and that the schools are so organized and conducted as to illustrate and exemplify the principles on which the lectures are based. Taking the two metropolitan institutions as examples, to which other training-colleges more or less closely approximate, this result is attained in the following manner:—Each student observes a course of lessons in every elementary subject given by competent teachers; every step is described previously, and then worked out; the student prepares full notes of these lessons, which are afterwards revised by the teacher of method; when she has been thus tested as to her knowledge, she gives the lessons herself under the superintendence of the same teacher. The management of each class and each division of the school is thus experimentally as well as theoretically taught. The papers on school management, which I have revised for some years, my personal observations made carefully at every tour of inspection, as well as the reports of most of my colleagues, and of school managers generally, convince me that the system is the right one, and that, although very much remains to be done in order to bring it into full and practical operation, it is effecting considerable improvement. I am of opinion that the plan which I submitted to your Lordships, in my last report, ought to be acted upon without further delay. I think that the Inspector of each district should visit the practising schools in his district once a quarter, not to examine the children, but, to observe exactly the methods there employed, and to ascertain the progress of the students in this most

practical and important of all points connected with their professional training. There are, unfortunately, some institutions so situate that a sufficient number of children can scarcely be collected for doing all that is desirable, but with skilful regulations much can be done in all. It is, however, important that the limit of what is really practicable should be clearly perceived. Desirable as it might be, it is certainly not practicable to put students in charge of practising schools. These schools must be managed for them, and not by them. They may be, and in some training colleges they are employed in turn as assistants to the schoolmistress for a week or fortnight. They cannot, however, be entrusted with the actual charge either of the discipline or instruction. Such an attempt would be ruinous to any school. A succession even of thoroughly competent and experienced teachers holding the reins for a few weeks would be incompatible with good order and systematic teaching. This being the case, it is a fact, which it is useless to deny, and which it would be wrong to disguise, that, during the period of training, students cannot be put in a position in which their real character, their power to manage large masses of children, to control, instruct, and influence them, may be effectively exercised and thoroughly tested. We have several data to go upon. We can ascertain whether a student knows what she has to teach, whether she knows how her work is to be done. The managers can form a tolerably accurate estimate of her strength of will, soundness of moral principle, energy, and tact. When they use their opportunities of observing her with care, I do not believe that they are often deceived in their judgment. Still it may be the case sometimes, that a young woman of genial temperament and winning manner, may acquire a character while under the influence of an able teacher of method, which she may be unable to retain when brought into contact with the stern realities of life. It is no small matter for a young woman of twenty-one years of age to be placed single-handed in charge of some hundred girls. Managers ought to be very careful to sustain her authority. Visitors of the school should be very cautious in expressing an opinion of her powers ; and, although no timely advice or admonition should be withheld, comfort and encouragement are equally needed and equally due to one so circumstanced, so hardly tried, and sometimes so severely judged.

Progress of practising schools under inspection.

I am glad to be able to report this year that the proportion of time passed in the practising and model schools is considerably increased in most institutions. The practising schools are generally improved. Considerable additions have been made at Derby, and entirely new sets of buildings have been erected

for Whitelands and for the Home and Colonial institution. In some institutions there is still a great deficiency noted in my separate reports.

Examination on school management.

In the meantime the practical ability of the students can only be tested in two ways by the Inspectors. The answers to the examination papers on school management may be sufficient to show how far the candidates know what they have to do, are conversant with the best methods of teaching, and understand the principles on which those methods depend. I cannot admit that such answers as were sent in by many students are merely theoretical. The questions touched on very practical matters, and could not be well answered by any one who had not had many opportunities of watching school work, or had not made a good use of such opportunities. It requires no great discernment to distinguish between the answers of one who has merely crammed up a series of lessons, and repeats parrot-like the words which she has heard, and the genuine opinions expressed by one who has been in the habit of bringing her theories to the test of practical application. A well informed young woman who knew nothing, or very little, of the actual working of a school, might produce a paper indicating natural ability, but could not impose upon an examiner of any experience. Besides there is no reason to suspect the candidates of an intention to impose on the examiners. I generally find that they state fairly enough what they know from their own observation, and what they have learned by oral lectures. Most of them have passed several years, many of them nearly all their lives, in such schools as they will have to conduct hereafter. What most pupil-teachers want is just what they do get in a good training school,—lectures explaining clearly the principles which should guide them,—examples of good teaching under a great variety of circumstances,—the advice and suggestions of experienced governesses, and last, not least, the advantage of constant intercourse with girls educated like themselves in good national schools, and bringing with them much valuable information on all details of school-keeping. The Inspectors can further judge of the personal ability of the students by the lessons which they give to children in our presence. In former reports I have frequently had occasion to speak fully upon this subject. It is, however, important to state, that every year's experience confirms me in the belief that reliance may be placed upon our reports. I have heard some hundreds of lessons, most of them with one of my colleagues. We usually take full notes, and do not record an opinion on any point or on the total result without an entire concurrence. It might have been expected that some difficulty would occur in coming

to a common decision, but it is a fact, to which I attach very great importance, that, after carefully adjusting our general standard, we have not in one single instance this year felt any hesitation in fixing the total mark. Still more satisfactory is the fact, that, we scarcely ever find that there is any material discrepancy between the results of our observation and the estimate of the student's ability formed by the principals and teachers of method. We frequently request these officers to make out a list of the students, classified according to their ability in teaching. We almost invariably find that the highest and lowest marks coincide, and upon a minute inquiry can generally account for exceptional cases in the middle divisions. I have made a similar statement in former reports. I repeat it, because it meets a very prevalent and erroneous impression, that the results of observations made under circumstances so trying to the nervous system of young women, must necessarily be very fallacious. Had I found a real difficulty in forming a judgment or in reconciling that judgment with the opinions of my colleagues, and with the estimate of those who have full opportunities of observing the character of the candidates, I should certainly have felt it my duty to recommend the discontinuance of this part of the examination. As the facts now stand, I regard it as one of the most important and satisfactory results of annual inspection. While, however, I do believe that such lessons as we generally hear give an ample opportunity of observing the manner and estimating the abilities of candidates, I am still far from asserting that they are the best exercises for them, or that they ought to form the most prominent part of their professional training. I believe that there is in most institutions some danger lest the practice of giving collective lessons should be carried to excess. Unfortunately there is no other exercise, so far as I can judge, which would enable the Inspector to report upon so many essential points in a candidate's personal qualifications. Great care is required not to allow that consideration to weigh too much with managers in the distribution of time and the course of lessons. Collective lessons, even of the best kind, should form but a subordinate part of the school system. For infant schools, they are in some points peculiarly adapted, but even in them they are apt to degenerate into mere pretence, unless the mistress is a thoroughly earnest and practical teacher. For some portions of a boys' school they are indispensable; the elements of some important subjects cannot be well taught on any other system. But I become every year more convinced that they should be introduced very sparingly in girls' schools. Geography, history, domestic economy, supply good subjects for occasional lessons of this

kind. Religious impressions and principles are inculcated with great force by a good teacher addressing a gallery. The real progress, however, of the girls, and still more the formation of those habits which are most essential to their future welfare, depend upon the orderly working of the school and upon the minute and unwearied attention bestowed upon individuals. I have examined many good schools in which the teachers never attempted collective lessons; indeed they are scarcely used at all in the best schools under my inspection; but I do not find that satisfactory progress in any elementary subject is usually made when much time is spent upon the gallery. The special advantages claimed by the advocates of the system, the awakening of slow intelligences, the excitement connected with sympathy of numbers, the lively impression made by animated and persuasive eloquence, are not easily attained. They require special personal qualifications, in addition to special training in the teacher; and it is a question which I should not care to answer, whether there is not some risk that, if attained at all, it may be at the cost of some detriment to the simplicity and unaffectedness of the teacher's character, and of some tendency to display and over-excitement in her apprentices and even her young pupils. These observations do not apply to lessons given to small numbers of girls nearly in the same stage of mental development—to such lessons, for instance, as are generally given at the Home and Colonial training college.—They do apply, however, with peculiar force to the use, or rather to the abuse, of what is usually known as the elliptic method, which has of late years been introduced in several institutions, and in some is carried out to an extent which threatens to be seriously detrimental to the interests of education. I have felt it my duty to submit the following remarks to the managers of one training college of the highest character:—

"With regard to the instruction of students in the art of teaching, and especially in giving collective lessons, we have the following remarks to be submitted to the consideration of the committee:—

"The students, generally speaking, displayed a very fair acquaintance with the subject matter of the lessons, which were also, for the most part, judiciously selected, not beyond the capacity of the children, and calculated to interest and instruct them. The illustrations by objects, drawings, &c., were fair. The manner of the students was remarkably self-possessed, modest, and unassuming. It is evident that they had been carefully trained.

"We were, however, much struck by what we cannot but regard as a prevalent and characteristic defect, pervading nearly all the lessons, and most seriously affecting the value of a considerable number of them,

"We consider that the system, generally known as the elliptic method, is carried out to an extent which threatens to be really detrimental to the interests of education. The committee must be too well acquainted with this method, which affects, more or less, every lesson given in this institution, to require any description of it. But they may not, perhaps, be aware how very

materially it impairs the accuracy of these lessons—the waste of time which it causes—and the appearance of affectation which it produces. Our objections to the method, in the form which it actually assumes in this place, are twofold: firstly, touching the system itself, secondly, the way in which it is actually worked out.

"We have both heard some hundreds of lessons, each half an hour long, in various parts of England, and under all kinds of circumstances. The impression which was long since made on our minds by the lessons, in which this system is a leading, or marked characteristic, has been strengthened and confirmed by repeated observations, in which also we find that all our colleagues concur. Even when the method is carried out with talent by an energetic and genial teacher, the results are unsatisfactory. The children *appear* to be acquiring knowledge—to be brought into a state of intellectual activity—to be exercising the faculties of judgment, invention, and memory—and, [to use the technical term,] to be trained as well as instructed. But it is, after all, but an appearance—there is seldom, if ever, any reality in the matter—the children are guided by a sort of instinct, and show a really wonderful tact in catching indications of what the teacher expects them to say; but in ninety-nine cases out of a hundred, the word supplied by the class does not proceed from their own minds, is not the product of their own faculties, and is no indication of a mental process which has any educational value. We should be quite content to abide by the judgment of any careful observer taking the very ablest of the students—if not of the teachers—to exemplify the effects of a lesson thoroughly carried out on this method.

"But our objections are even more strongly directed against the practical abuses of the system. Many lessons which would have been good, if delivered simply and naturally, are seriously damaged by the attempt to introduce ellipses. We believe, that in nearly every case when we gave marks below good this year, it was chiefly owing to this cause. Several of the lessons were entirely spoiled. Our marks for the lessons, and those which we gave for the general appearance of ability of the candidates, were scarcely to be reconciled. Mr. —— and I took copious notes of every lesson. In a great number of cases, we both of us had these notes:—*Teacher*, modest, earnest, apparently intelligent and well-informed. *Lesson* of little practical use—much time wasted in unsuccessful attempts to elicit answers which she has no right to expect—children and teacher equally deceived as to what is really effected by the lesson.

"In such cases we gave the teacher the benefit of our joint opinion of her personal qualifications, but with a strong feeling that we ought to bring the subject formally under the consideration of the managers of this institution. We should feel that we somewhat exceeded the limits of our official duty, were we not fully convinced that all members of this committee will agree with the conclusion to which we have arrived, if they will take the trouble to hear some dozen lessons, taking full notes of the ellipses left by the teacher, and supplied by the children. Our immediate object, however, in bringing the question before you is, that you may decide upon the course to be pursued before our next inspection. If you consider that the method is one that ought to be continued, we shall listen to the lessons with every wish to judge the students according to their real merits, making due allowance for what we cannot but regard as defects inseparable from the system. If you decide otherwise, we shall find it less difficult and more satisfactory to report on the efficiency of the students, as well as on the value of the lessons which they may give."

I should not have made so strong a representation had I not ascertained that all the Inspectors who have had most experience coincided in the opinions here expressed. Those who think most favourably of this method consider that it can only

be efficient when the teacher combines great adroitness and somewhat of dramatic talent with the utmost simplicity, good taste, and self-possession; and that whenever failures occur the results are most unpleasant and injurious. Such qualifications, surely, are rare; we have scarcely the right to expect them under the most favourable circumstances. Without saying, therefore, that the method ought entirely to be discontinued, I do say very strongly that it should be used with the utmost caution, and carefully restricted to those lessons and to those portions of lessons in which the ablest professors find that it can be employed with least danger and with most effect.

Instruction of students.

5. I have few remarks to make upon the course of instruction which have not been submitted to your Lordships in previous reports. It is certainly somewhat disheartening to hear the same objections constantly repeated, with little or no reference to answers, which, I believe, have been quite satisfactory to all persons who have taken the circumstances of the training colleges into consideration. That the examinations are not too difficult, and that they are fairly adjusted, upon the whole, to the attainments of the students, is most satisfactorily proved by the general success of the candidates of the second year, by the small proportion of failures, and the large proportion of those who are placed high on the class lists. That the course of instruction does not include any superfluous subjects, nor omit any that are really desirable, may be fairly assumed. It is certain that no one committee of local managers has expressed a wish to introduce any new subject or to discard any one at present forming part of the course, although I never fail to bring the question before them in a formal manner at the annual conferences. It is, however, important to keep the following fact in mind, when any question is raised as to the tendency of the examinations to overtask the energies and excite the nervous system of candidates. The students can obtain marks for every subject, and by a fair general amount of attainment they can secure a satisfactory position in the class list. They can also omit any, indeed all the subjects about the necessity of which the slightest doubt exists, without incurring danger of failure, provided that they have a real and thorough knowledge of those subjects which every school manager holds to be indispensable for an efficient teacher. The only subjects in which failure involves the loss of a certificate are religious knowledge, arithmetic, school-management, practical skill in teaching, spelling, and correct English.

I proceed to consider the general results of the last Christmas examination.

163 candidates had completed the second year of their training.
Of these 52 were in the 1st class.
69 „ 2nd „
39 „ 3rd „
Only 3 failed altogether, and
Only 1 of these was in the training schools of the Church of England.

This result is most satisfactory, and as I shall presently show, it is to be attributed to the careful and successful instruction of the students in those subjects that are most important to the teachers of elementary schools.

Again:—

447 candidates had completed their first year of training.
Of these 31 were in the 1st class.
77 „ 2nd „
128 „ 3rd „
137 „ schedule.
74 failed.

The disparity between the two divisions was greater than in any former year.

The following summary shows the general results of the examination in each subject:—

EXPLANATION of MARKS.

E. Excellent, when all the students obtained the marks Fair, Good, or Excellent.
G. Good, when more than 80 per cent.
F. „ 50 to 80 „
M. „ 40 to 50 „
V.M. „ 20 to 40 „
Imp. „ under 20 „

CANDIDATES at the END of FIRST YEAR.

From these tables it appears that nearly all the students of the *second year* passed a satisfactory examination in all elementary subjects. The only points in which a comparative weakness is noticeable are the Liturgy, in which I should have expected all to succeed; geography, and the essay, both of which imply considerable cultivation in successful candidates; industrial skill, in which the work to be done was somewhat more dif-

ficult than in previous years; in music and drawing, which, though most useful to a teacher, require much time and some special aptitude. On the other hand, nearly one-half of the *first-year* students produced very unsatisfactory papers on Holy Scripture, domestic economy, and English history. More than one-half sent in weak and ill-written papers on school-management. It seems, however, evident, that with due care and diligence, a very considerable proportion of those who were placed on the schedule, and even of those who failed, may obtain a fair place in the class list next Christmas. I draw this inference from the fact that scarcely any failed in spelling, and nearly all read fairly; that a large proportion passed well in Liturgy and English grammar, and that several of those who failed acquitted themselves fairly in arithmetic, industrial skill, notes of a lesson, and in geography.

The point which strikes me most forcibly in considering all the preceding questions in reference to the training of students is the undoubted superiority of those who have remained two years in these institutions. This superiority is indicated by the results of the examination; but is even more evident where other points of far higher importance than increased proficiency in knowledge are taken into consideration. The moral influences of the training college are but gradually brought to bear upon the character of the students. Superintendents are unanimous in asserting that a discernible improvement generally takes place towards the end of the first year, but that the real change, depending upon clear perception of principles, the formation of steady and practical habits, and the general remoulding of character, is for the most part effected in the course of the second year. After the first annual examination the mind seems to be relieved of a great pressure,—the student learns to look upon mental culture more distinctly as a preparation for future duties,—she gives her attention more willingly and more entirely to the practical work of the schools, and, in a word, makes the onward step which marks the transition from youth to womanhood. I believe it quite possible to accomplish one or other of the special works of a training college in a single year's training. With able officers the students may complete their own education, they may acquire clear notions of their special duties, or they may be practically trained as teachers in the model and practising schools. I do not believe that it is possible to accomplish all. One or other object must be sacrificed. The students must either give up lessons or school-work. Unfortunately it is their immediate interest to give up that which is by far the more important object; nor can any regulations, however carefully enforced, effectually counteract

a tendency so injurious to the cause of education. Success at the first examination necessarily depends mainly upon the proficiency of the candidates in subjects which can be tested by written papers. They know this. They know that they have not to give lessons before the Inspectors (Minutes of 1854–5, pp. 62–64); that we have not and cannot have any means of ascertaining what progress they are really making as teachers. They know also that failure in head knowledge will be fatal, and that they will suffer in income and position during many years should it occur. At the same time there are great temptations to shorten the period of training. The demand for teachers is very urgent. Young women are generally impatient to escape from restraint and to become independent. They are often actuated by other more excusable and even laudable feelings. They may have parents, brothers, and sisters to help; and they may have a real longing to become active agents in the work of education. The consequence is that many have left at the end of the first year to whom a lengthened residence would have been an incalculable benefit. I am very decidedly of opinion that all fair means should be taken to discourage this tendency. In the case of persons who enter training schools after having had some experience as teachers, one year's residence is sufficient. In the case of other students, every inducement should be held out to the managers and to themselves for a prolonged residence. In the course of the present year I propose to bring the subject formally under the consideration of all the committees of management, and to present a special report to your Lordships after completing the next tour of inspection.

Financial statement.

6. I proceed to consider the financial condition of these institutions.

† Not including the extra expenses in the last column.

Upon comparing this statement with that which I presented last year, I observe the following results:—

		£	s.	d.
1855.	Total current expenditure for 649 students -	22,544	0	6½
1856.	Ditto, for 716 „ -	22,812	13	4¼

This shows a diminution in the average cost of the students:—

	£	s.	d.
In 1855 - - -	34	14	8¾
„ 1856 - - -	31	17	2½

The average cost in each training school for both years:—

	1855.				1856.			
	No. of Students.	Cost.			No. of Students.	Cost.		
		£	s.	d.		£	s.	d.
Bishop's Stortford - -	45	42	3	3½	44	36	11	7¼
Brighton - - -	27	35	10	0	31	33	8	9¾
Bristol - - -	19	59	5	1	31	44	8	1¾
Cheltenham - - -	77	28	15	3½	59	33	3	8¾
Derby - - - -	39	29	16	0½	40	31	4	7¾
Home and Colonial - -	178	36	7	6¾	175	35	17	1½
Norwich - - -	16	54	13	4	20	46	11	0¼
Salisbury - - -	56	24	8	11¼	60	25	1	8¾
Warrington - - -	68	26	15	9¼	86	23	11	2½
Whitelands - - -	95	39	11	6¼	115	37	3	11¼
York and Ripon - -	25	34	18	3	24	35	2	7¼

The following table shows the cost of housekeeping (including board, wages of servants, washing, fuel, lights, medical attendance, and other current expenses) per head during three successive years.

	1854.			1855.			1856.		
	£	s.	d.	£	s.	d.	£	s.	d.
Bishop's Stortford - - - -	23	2	6	23	5	3	24	10	4
Brighton - - - - -	20	15	10	20	10	10	17	11	9
Bristol - - - - -	34	19	5½	25	14	5	23	8	1
Cheltenham - - - - -	-	-	-	12	8	6	15	18	4
Derby - - - - - -	17	14	4½	19	1	8	19	14	10
Home and Colonial - - -	22	17	5¼	21	17	6	26	15	4
Norwich - - - - -	21	1	8	25	1	1		—	
Salisbury - - - - -	16	10	2	16	17	3	18	4	5
Warrington - - - - -	15	1	4	17	11	5	20	13	0
Whitelands - - - - -	18	6	1	20	9	8	19	9	4
York and Ripon - - - -	20	19	11	19	18	2	24	7	7

From this it appears that the diminished cost per head was owing chiefly to the increase of numbers. This was evidently the case at Brighton, Bristol, Norwich, Warrington, and Whitelands. On the other hand, the expense was increased,

at Cheltenham where the number of students was reduced, owing to changes in the domestic arrangements. It is an important question whether these returns represent truly, not only the actual, but, the probable expenditure in future. I do not think they do so. In those institutions where the average cost of students falls short of 35*l.*, a sufficient sum is not allowed for tuition. In some of them more teachers are required in order to do the work thoroughly and without undue pressure upon their mental and physical powers; in others the chaplain receives little more than a nominal remuneration. Those institutions are most fortunate in securing the services of gentlemen who look for no other reward than the opportunity of doing good; but such an arrangement cannot be depended upon for a permanency. When the institutions are fully organized and adequate salaries paid to all the officers, I apprehend that the average cost for large institutions must be reckoned at 37*l.*, and for small ones at 40*l.* per head. The sources of income and the proportionate amount of the several items of expenditure do not vary materially from the returns which I made last year.

PRINCIPAL SOURCES of INCOME.

	1855.			1856.		
	£	s.	d.	£	s.	d.
Subscriptions, grants from Boards, &c. -	6,820	13	5½	6,346	13	0
Fees paid by Students or by private Patrons	6,790	13	5	7,289	2	10
Paid by Government for Queen's scholars -	4,330	18	4	4,452	13	0
Grants for examinations at Christmas -	3,859	3	6	4,066	0	0

PRINCIPAL ITEMS of EXPENDITURE.

	1855.			1856.		
	£	s.	d.	£	s.	d.
Tuition - - - - - - -	5,730	9	10	5,531	2	10
House-keeping - - - - -	12,671	8	7½	12,496	6	8

This statement seems to augur well for the stability of the institutions. It is evident that there is no undue pressure upon the voluntary principle, so far as subscribers and local boards are concerned. Their contributions do not considerably exceed one-fourth of the total income required. This is not too large a proportion, considering that the management of the training colleges and the appointment of the officers is entirely in their hands. Subscriptions to the amount required to keep all in a high state of efficiency may be safely calculated upon, especially when we take into consideration the fact that the resources of most dioceses were tried somewhat severely in raising the large sums expended in the building and establishment. It appears to me remarkable that so few collections for training colleges are made in churches. I regret

this, not so much because it cuts off a fair source of income, but chiefly because the best opportunities are lost of bringing the subject before the minds of the laity, of explaining the practical objects and effects of the system, and of showing how materially the spiritual and moral as well as intellectual improvement of the people depends upon its success. It is very satisfactory to observe how large a proportion of the expense is defrayed by the students' fees. Some diminution may be expected in consequence of the extension of the exhibitions for Queen's scholars to candidates who have not been pupil-teachers. That extension is, however, restricted within fixed limits, and I am of opinion that the stimulus which that boon, so much called for, will give to the whole system, and the effect which will be produced upon the public mind, will bring a large number of candidates into the field, many of whom, though unsuccessful in their examination, will enter the training colleges at their own expense, and supply, after a regular course of training, a valuable class of teachers. I have known some instances in which candidates were sent up to the examination with the full intention on the part of their friends to give them, with or without Government assistance, the advantages of complete training. Of course the grants made by your Lordships, both for exhibitions and for the successful candidates at the Christmas examination, will increase regularly. Should they, however, reach the possible maximum in some future years, they will not amount to a formidable sum. Fair demands will still be made upon local resources, while the increase will be but a fair measure and proof of the increasing success of a system which is rapidly supplying one of the greatest wants of the age, and producing the most beneficial effects upon the principles and habits of the people.

I have the honor to be, &c.

F. C. Cook.

To the Right Honorable
The Lords of the Committee of Council on Education.

Appendix A.

REMARKS ON EACH TRAINING COLLEGE.

In nearly all these institutions I found the same officers, the same course of instruction and training, and the same organization as last year. The following remarks will therefore be very brief, and directed chiefly to points which have been brought under my notice in the last tour of inspection.

Bishop's Stortford.—The instruction and professional training of the students have been conducted with great ability and success. It is remarkable that no Queen's scholars were admitted last year. The institution is one that offers every advantage that might be expected to induce the parents and friends of Queen's scholars to send them, and it may be hoped that in future a fair proportion will enter yearly. It is still more remarkable that notwithstanding the imperfect training the students had received previously, the result of the Christmas examination was very satisfactory. There were no failures in the second-year students; not many in the first. The papers on most important subjects were good. This result must be attributed to the energy and ability of the chaplain and of the young governesses who were trained in this institution, and are accurate and diligent teachers. The practising schools are well organized, although, from their situation, the numbers in attendance are less than might be desired.

Brighton.—The institution is increasing in numbers. No Queen's scholars were admitted last year.

The work of the students has been conducted by an excellent and very able superintendent, Miss Romney, and two governesses, one of whom—a most conscientious and well-informed teacher—died very lately. It is true that a considerable number of the candidates failed at the last examination, but this is to be attributed entirely to the deficiencies of their previous education. The expenses incurred in completing and taking possession of the new building have caused some financial embarrassment to the managers; but it may be hoped that an institution so much needed, and conducted with so much success, will not permanently suffer for want of adequate support.

Bristol and Gloucester.—The number of students is increasing. The instruction and training are efficient and systematic. The proportion of failures in the case of first-year students last Christmas was large, but sufficiently accounted for by their low qualifications on admission. The institution has been liberally supported, and with a fair supply of Queen's scholars, there is every reason to hope that the financial difficulties will be surmounted, and that its general condition will be entirely satisfactory. No pains have been spared by the very intelligent and able officers who superintend this establishment.

Cheltenham.—No change in the staff of teachers since last year. The instruction is remarkably efficient, and great pains are taken to give the students a thoroughly professional training. It is to be regretted that the domestic training is not more effective. The managers have not yet adopted the suggestions which Mr. Bellairs and I have repeatedly urged upon their attention with reference to the ground for exercise and recreation. The interior of the building has been rearranged, and the domestic accommodations are now satisfactory and sufficient for the number in residence. The institution is quite full, with a very large proportion of Queen's scholars.

Derby.—No change had been made since the previous visit of inspection. We had every reason to be satisfied with the progress of the students and the general efficiency of the instruction and training. A careful inquiry into the amount of daily work devolving upon the teachers led me and Mr. Blandford to the conclusion that an additional governess was absolutely needed. The committee of management fully concurred in this opinion, and have since appointed one; they have also enforced the regulations relating to exercise and recreation. It is an important fact that a most careful inquiry proves that three governesses are required for forty students, when the superintendent is fully occupied with domestic matters and the chaplain is non-resident.

Home and Colonial School Society's.—The full reports which I have made for several years upon this establishment make it unnecessary for me to describe its organization or to expatiate on the system of instruction and professional training conducted with equal energy and ability by a large staff of thoroughly efficient teachers. I have, however, to record the fact, that in consequence of suggestions made by myself and Mr. Tufnell last year, touching the insufficiency of domestic accommodation, the committee of management have completely reorganized this department. At a considerable expense with the aid of a large grant from their Lordships, they have remodelled all the dormitories, provided fully for the ventilation and warmth of every apartment, and erected an entirely new set of buildings, on which there are good dormitories for students, and a set of excellent school-rooms. At present the institution, which has always enjoyed and well-deserved a high reputation for educational efficiency, may be represented as in most essential points a desirable place for the training of young women. While it is equal to any in the training of teachers for girls' schools, it stands alone in the completeness and efficiency of its provision for training infant schoolmistresses, and presents very peculiar advantages to teachers who may be prepared to take charge of mixed schools for boys and girls. No institution has so large a number of children of all ages, so great a variety of well-organized and efficient schools, in which the students may observe educational processes and put the lessons they receive into practice, while in none are the principles of education more carefully studied, and combined more skilfully with practical exemplifications. The new buildings have supplied the only external desideratum, and there is reason to hope that the attention which the managers have every desire to bestow upon domestic training will give a thoroughly practical tendency to the students' minds. With their usual readiness to try any experiment which seems likely to conduce to the improvement of teachers, the managers have arranged a portion of their premises for the employment of their large class of pupil-teachers in culinary and other domestic matters. I am informed that the trial has been successful, and it may be hoped that other institutions will not be unwilling to follow this example. The observations which Mr. Tufnell and I felt it our duty to make last year touching the scanty supply of infant school teachers have not been without effect. I doubt not that the new Minute, of 24 April 1857, will induce a considerable number of young persons, well qualified morally and physically, to apply for admission to the infant school class, and with due application to those branches of instruction, which are admitted to be indispensable for any teacher, there can be little fear than many of them will pass the examination which will entitle them to conduct schools on the receipt of annual grants, while a fair proportion may be expected to be placed in the first class, being thus qualified to take charge of pupil-teachers. This Minute, in fact, extends every advantage of the existing system to infant school teachers. I see no reason why the future supply should not increase at the same rate as that for other schools. Some time will probably elapse before the facts are generally known, and for years it may be that the Home and Colonial will be the only one providing a complete and efficient course of instruction and training. But the great demand for such teachers, stimulated as it must be by the capitation grants, will soon make itself felt, and many young women will probably avail themselves of such an opening.

Norwich.—This institution is still contending with great financial difficulties, chiefly owing to the small numbers of students. The instruction is very good in all points and the students have every opportunity of learning their professional work.

Salisbury.—No charge since last year. The institution is well organized, and conducted with great care, and the tone is excellent. The results of the last examination was unsatisfactory, owing, as it would seem, to the imperfect education which most of the lately admitted students had previously received. The great want of the institution is that of sufficiently large schools of girls and infants within an easy distance.

Warrington.—The number of students has increased rapidly since the enlargement of the institution, which is now quite full. We found seventy-three in residence.

No change has taken place in the organization or number of officers. I am of

opinion that the teaching power may be advantageously increased and some additions should be made to the apparatus.

Whitelands.—No change in the officers or general organization since last year. The very remarkable success of the students at the last Christmas examination calls for special notice. No failures occurred in either year. The proportion of students in the first class exceeds the highest standard that had previously been reached. Of 61 students of the first year 13, and of 42 of the second year 18 were so distinguished. This result reflects high credit upon the teachers and the candidates. It proves that the instruction was efficient and judicious, and that the minds of the students were heartily devoted to their work. I have shown in a former part of this report that the success of the students was most conspicuous in those subjects which are most essential to the teacher of girls. I have also the satisfaction of knowing that this result has been attained without any undue pressure upon the mental or physical powers of the candidates. Nothing is more striking than the calm business-like way in which these young girls set about writing their answers at the examination. It is by no means a work which they dread. They have all passed such trials too frequently to be thrown into a state of nervous excitement. They know too well how carefully the examination and their previous training have been adjusted to each other to entertain any unreasonable apprehensions of failure. The superintendent, who is specially responsible for their health, informs me that they look forward to the examination without anxiety, and show no symptoms of exhaustion or over-excitement at its close. I also state, upon her authority, a fact which cannot be misapprehended, and which supplies a complete answer to the question as to the effect of the studies upon the students' health. The medical attendant of Whitelands asserts not only that the health of these young women is quite equal or better to that which he has found for several years, but that it is superior to that of any number of young women of the same age in any part of London. I have no doubt that the most minute inquiry will establish this fact. With such a dietary as that adopted at Whitelands, with regular hours for exercise, rest, and recreation, with well ventilated and commodious apartments, the amount of mental exertion called forth by their daily studies forms a pleasurable, and certainly far from unhealthy, change. At any rate the fact is, that they are healthier, stronger, more energetic, and cheerful when they leave this institution than when they enter it, and so far as can be judged from the accounts given by the managers of schools, are for the most part fully capable of discharging their somewhat onerous duties as schoolmistresses with success. I have further to observe that a complete set of school-buildings has been erected since my last report. They are excellent rooms, admirably arranged, and sufficiently large to receive boys, girls, and infants, for all the purposes of practising and model schools. The schools are conducted by mistresses trained in the institution and holding first-class certificates, and superintended by the professor of method, who is chiefly responsible for their efficiency.

York and Ripon.—No change since last year. The progress of the students is generally satisfactory, and a considerable improvement is to be remarked in their power of teaching. The practising school is not large, nor convenient in form and arrangements, but it is conducted with great care by an efficient teacher.

Appendix B.

REPORT *on the* TRAINING INSTITUTION *of the* BRITISH AND FOREIGN SCHOOL SOCIETY, *in the Borough Road, Southwark, by Her Majesty's Inspector of Schools*, J. D. MORELL, Esq., A.M. ;—*for the Year* 1856.

MY LORDS,

I HAVE the honor to lay before your Lordships my report of this institution, which I inspected during the week commencing on the 6th of October 1856.

Buildings, &c.

I. In reference to the buildings and physical arrangements generally, as they now exist, it is necessary, in order to estimate them aright, to take the *history* of the institution into account, and notice the gradual series of developments through which it has passed up to its present actual position. It was here that Joseph Lancaster began his philanthropic scheme for the amelioration of the lower classes through the instrumentality of primary education. The germ of the whole establishment accordingly was involved in his original monitorial school, which, however incapable of reaching our present idea of what a perfect school ought to be, yet was a great and noble attempt to do by small means a vast work, for which no other system of agencies was then in existence. To spread this work throughout the country, young men were admitted, for a few weeks generally, to learn the monitorial system as there practised, and then were sent out to organize or conduct similar establishments in the different towns or populous villages of Great Britain. Upon this simple foundation the present establishment has grown up. As wants have arisen, attempts have been made to supply them. Thus, the buildings and collateral arrangements have, in fact, increased with the institution, until they have been made to occupy every available square inch of area which the trustees of the property possess in that locality. Under these circumstances it would be wholly out of place to compare these erections with those more modern ones which have been planned on purpose to meet the present idea of a complete normal establishment. *Within a given limit* the arrangements have proved excellent. The large original school-rooms have been retained, so as to form two complete practising schools; and a variety of class rooms have been added, according as available space around the institution admitted. In the normal department lecture-rooms, of what *seemed at first* ample dimensions, were built, and domestic arrangements to correspond were added, as they now exist.

Origin of institution.

Present increased demand of normal school accommodation.

The extension and the stimulus, however, which the recent development of the pupil-teacher system has given to normal school education have begun to cause so great a demand in regard both to the number of the students and to their educational requirements, that the exertions of the society already begin to be crippled in this point for want of larger accommodation. The deficiency of room in the domestic arrangements is partly suppled on the male side of the establishment by renting a house in Manor Place, Walworth, where a considerable number of the students are accommodated with sleeping apartments, the whole of the day being spent at the Borough Road. In other points, however, the above-mentioned deficiencies are not so easily supplied.

Additions required to meet those demands.

To make the establishment complete, and to bring it up to a maximum point of efficacy, the following additions appear to me, if not *necessary*, at least in the highest degree *desirable*.

Class-rooms.

1. Additional class-rooms for the use of the normal department. One large room is particularly needed for those general lectures on teaching and other important topics in which both departments are from time to time united. The present "theatre" is quite inadequate to this end. It affords no sufficient accommodation even for 150 students, and when quite filled, soon becomes hot, close, and inconvenient. In a large normal establishment a hall or lecture room, of ample dimensions, where all the members can be properly convened from time to time, visitors, if necessary, admitted, and general examinations carried on, is of great importance. The only means of meeting this want at the Borough Road at present is by employing one of the large model school rooms, which accordingly has to be partially dismantled and specially fitted up each time it is needed. In the female department, the want of class rooms for the lectures is still more perceptible. Although there are above 70 students on the premises, there is not a single lecture room on that side of the establishment in which 40 can assemble for an hour with even *tolerable* comfort. So greatly, indeed, has this department outgrown the accommodation, that a very serious obstacle is offered to the effective working of the classes by the absolute want of space and teaching conveniences.

Laboratory.

2. A second deficiency, much felt at present, is the want of a chemical and philosophical laboratory. Very little good can be done in these departments without good apparatus and experiments. Such experiments are more especially necessary for those who are undergoing simply a short course of practical instruction; for, in their case, the bare theories that are enunciated in the lecture room will *soon* pass away from the memory, while the concrete and practical knowledge picked up from a judicious course of experimental science will always remain of

essential service to a teacher in the sphere of life he has afterwards to occupy. A room set apart for a laboratory, and a judicious outlay for philosophical apparatus, I cannot therefore but regard as *a clear desideratum.*

Infant school.

3. To go from the normal to the practising schools, various deficiencies occur in the present arrangements here also. The most obvious is the entire want of any infant school department. This want it is attempted to obviate by a course of lectures on the "Infant System." But it is hardly necessary to observe how imperfect any explanations respecting infant teaching must be where there is no infant school to show the plans recommended in actual operation. A model village school would also be a great help in initiating the students into the details of their future duties. It is clear that the present practising schools cannot offer *any resemblance whatever* to an ordinary village or town school, such as will be placed in the hands of the students when they go forth to the actual duties of life. Hence, the propriety of having attached to every normal establishment a school *by itself*, composed of about the same number of scholars as are usually found in a moderately sized town school, and containing children of all ages. In this way a perfect example can be given of the *kind* of work which each student will have actually to do as soon as he becomes a practical teacher.

Model village school.

Causes of deficiency.

The deficiences I have thus designated arise mainly from the cause before assigned, namely, the gradual growth of the establishment, and the impossibility of grafting every thing that modern improvements may suggest upon what was originally a single monitorial school. Those who are daily employed in the arduous duties of the normal school instruction themselves, feel the wants I have pointed out far more strongly than I have stated them; but they are always met by the impossibility of having them supplied upon an area, where every foot of ground is already put to its utmost use. The only remedy I can suggest is, to throw the entire present establishment into the male department, and then seek another site altogether for a separate female training school. With the aid now rendered to such undertakings by the Committee of Council, it does not appear to me that any very insuperable difficulty would stand in the way of its speedy accomplishment.

Finances.

II. With regard to the finances of the establishment, they are mixed up with a large aggregate expenditure connected with the general interests of education, as aimed at by the British and Foreign School Society. In addition to the model and normal schools, the Society provides travelling agents to inspect the schools conducted on their system throughout the country, and to aid in the furtherance of unsectarian education abroad, particularly in the colonies of our empire.

Taking the training department alone, the average cost per head for board and lodging, on the female side, is somewhat under 15*l.* This is considerably lower than the averages of any of the other female training schools, as given by my colleague, the Rev. F. C. Cook, in his last report. He considers from 17*l.* to 18*l.* the lowest average that can be reasonably expected, even in the cheapest districts. Cost per head on female side.

On the male side the average is proportionally high, amounting to more than 28*l.* per student. The close connexion of the two institutions will furnish the probable explanation of this result; many incidental expenses being thrown upon the male establishment which would in other circumstances tend to raise the average expenditure of the female department. Cost per head on male side.

The entire financial statement stands as follows:—

From February 1, 1855, *to January* 31, 1856.

I come next to the more special report of the normal schools, and shall find it more convenient to make the observations I have to offer on the male and female departments separately. Special Report.

In the male department, the staff of officers has undergone important changes since last year. Male department.

Dr. Cornwell, who so long and so honourably filled the office of principal, has resigned his duties, and withdrawn himself into a well-earned retirement; his place is now occupied by

Mr. J. G. Fitch, M.A., a gentleman who to sound scholastic attainments, both classical and mathematical, unites in a singular degree the patience, the industry, the power of clear statement, as well as the clear appreciation of educational methods and influences, which are so important to one filling the responsible post which he now occupies. Officers.

The post of Vice-Principal, formerly held by Mr. Fitch, is now occupied by Mr. J. C. Curtis, B.A., formerly a practical teacher of very great eminence and success. Though he has only been occupied here a comparatively short period, I have been much struck with the mastery he has already obtained over the subjects on which he lectures, and the thoroughness with which he aims to develop them to the classes.

The third officer, or tutor, is Mr. A. F. Smith, B.A., whose principal occupation is with the mathematical department, for which he shows eminent qualifications.

Beside the foregoing, there is a resident superintendent, Mr. Robert Saunders, upon whom the practical, moral, and religious supervision of the entire establishment rests; and I wish especially to embrace this opportunity of bearing my testimony to the excellent spirit of Mr. Saunders' superintendence. The kindliness and affability of his intercourse, indeed, with all who are placed under his care, would seem almost to relax the necessary bands of strict discipline, were not the actual results a clear proof to the contrary. I believe that it would be difficult to find another instance of such unexceptionable order and discipline maintained amongst a large number of young and active minds, with so little *show* either of strictness or reserve in the reigning authority.

To the foregoing regular officers of the establishment, we have to add the drawing master, Mr. J. Dicksie; the music master, Mr. Manby; and the drill-sergeant, Major Mace. The subjects which form the entire plan of study are distributed amongst the above-mentioned officers of the establishment in the following manner:—

The Principal takes the departments of English language and literature, the principles of arithmetic and geometry. He also superintends the collective lessons, given three times a week by the students in the school, and gives a series of lectures on school management. The Vice-Principal has charge of the Distribution of subjects.

subjects of history, geography, chemistry, and experimental science generally; he also gives one lesson per week to each class on the miscellaneous subjects comprised in the school reading-books. The tutor's duties comprise algebra, mensuration, trigonometry, and mechanics, besides book-keeping and practical arithmetic. In addition to the moral supervision of the household, the resident superintendent has charge of the Scripture class and the writing class, and gives one lecture per week on natural history. There are no lectureships attached to the college under the Minute of 20 August 1853; but the Principal has passed the examination in English literature, and would have held the lectureship, but for his recent appointment as Dr. Cornwell's successor. The Vice-Principal and the tutor propose to become candidates for lectureships shortly. In order to give some definite idea of the subjects which are included in the curriculum, both for the first and the second year students, of the time occupied by each, of the text-books employed, and the amount of matter which it is expected to get through in the course of the year, I subjoin the following Table, in which all these points are given in detail.

Subject.	Hours per Week. 1st Year.	Hours per Week. 2nd Year.	Teacher.	Text Books.	Remarks.
English Language.	3	2¾	Principal -	Allen and Cornwell's Grammar; The Young Composer; Morell's Analysis; Spalding's English Literature.	*First Year Class.*—In addition to the study of text books, a course of lectures on English language is given, founded for the most part on the school grammar, and intended to aid in teaching it intelligently. Exercises in paraphrasing, composition, logical and grammatical analysis, are also given from Warren's Blackstone. *Second Year Class.*—Exercises on paraphrase and analysis, founded on passages from Milton's Paradise Lost. A systematic course of lessons on the history and structure of the language, and on the history of English literature. In this class also essays on points connected with the science of teaching, and occasionally on general literary subjects, are prepared every fortnight by the students.
History	2	2½	Vice-Principal	Warren's Blackstone; Chapters on Manners, Customs, &c., in Pictorial History of England; Gleig's School History.	*First Year.*—In addition to the knowledge furnished in "Gleig," extended reference is made to such periods as are peculiarly important in our annals; these being thoroughly investigated. A regular series of lectures is also given on the constitutional history of the country. *Second Year.*—The entire course embraces the history of the manners, customs, and condition of the people, and the history of English law. The information under the former head is as far as possible systematized, while in the lectures on Blackstone more correct and satisfactory information is given as to those portions which recent historic investigations have proved to be incorrect, and the history of the English law is brought down to the present time.

Subject.	Hours per Week. 1st Year.	Hours per Week. 2nd Year.	Teacher.	Text Book.	Remarks.
Arithmetic	3	1	Principal and Tutor.	Cornwell and Fitch's "Science of Arithmetic."	*First Year.*—The exercises are worked as far as evolution, and a series of demonstrative lectures on the theory of numbers founded on the text-book, and intended to aid in elementary teaching, is given by the Principal. *Second Year.*—The course of progression and logarithms in the text-book, and numerous exercises on both subjects, and on the computation of annuities from various other works.
Algebra	2	2	Tutor	Colenso's, Bell's, and Wood's Treatises.	*First Year.*—This class generally works in one of the text-books as far as quadratic equations. *Second Year.*—All the subjects beyond quadratics in Lund's edition of Wood. In both classes many exercises are given not found in the text-books, in order to test the pupil's progress.
Mensuration and Trigonometry.	1	2	Tutor	Tate's Mensuration; Chambers's Practical Mathematics; Hind's Trigonometry.	*First Year.*—The rules of mensuration and land surveying generally: reasons being explained as far as the mathematical knowledge of the class will permit. *Second Year.*—Plane trigonometry, mensuration of heights and distances, land surveying; levelling.
Book-keeping	1	1	Vice-Principal	- - -	The method of keeping books by single and double entry is explained orally, and the meaning of mercantile terms pointed out. The students keep sets of books on each plan, and make out drafts, bills of exchange, &c.
Geography	2½	2	Vice-Principal and Tutor.	Cornwell's Geography; Hughes's Physical Geography.	*First Year.*—The several countries of the world are studied in detail; the physical features being first mastered, and the political facts as far as possible deduced from them. By a regular course of map-drawing, the size, form, and physical features of the countries, and the position of their towns, are still further fixed on the mind. *Second Year.*—In this class the course is more detailed, and extends to questions of commerce, population, social condition, &c., as well as to the physical geography of Hughes's outlines.
Chemistry	-	1½	Vice-Principal	Wilson's Chemistry	This subject is taken up by the second year class only. The course comprises inorganic and a slight sketch of organic chemistry, and is illustrated by numerous experiments. The bearings of the science on practical life receive much attention, especially in relation to manufactures and agriculture.
Common Things	1	1	Vice-Principal	- - -	A series of lessons, founded for the most part on the school reading books, including physiology, the laws of health, the chemistry of food, &c., and intended to furnish material for good collective lessons in elementary schools.
Mechanics	2		Tutor	Lardner's Handbook, vol. 1.	*First Year Class only.*—The elementary principles of mechanics as contained in the text book, and in addition, numerous examples in practical mechanics are solved. The principles involved in various forms of mechanism are also explained and illustrated by reference to the construction of several simple machines.

Subject.	Hours per Week. 1st Year.	Hours per Week. 2nd Year.	Teacher.	Text Books.	Remarks.
Physical Science generally.	-	2	Vice-Principal	Lardner's Treatises, Brewster's Optics, Treatises of the Society for the Diffusion of Useful Knowledge.	The construction and use of the various instruments used in hydrostatics, hydraulics, optics, electricity, &c., are explained, and the elements of those sciences themselves are studied as thoroughly as time will allow. An experimental course is also connected with these studies. In chemistry, besides the ordinary experiments described in the text book, a complete course of qualitative analysis is taken up. The students are shown how to make simple apparatus, and occasionally to perform the manipulations themselves.
Astronomy and Mathematical Geography.	1½	1	Tutor -	Herschell's Astronomy, Mathematical Geography. L. U. K.	*First Year.*—A series of lessons on popular astronomy is given; in which, besides the explanation of the more obvious astronomical phenomena, some account is given of the methods by which results are obtained. *Second Year.*—Elementary problems in practical astronomy, besides the information comprised in the text books.
Natural History.	1	-	Resident Superintendent.	- - -	A series of weekly lectures, comprising a systematic classification of animals according to the system of Cuvier, and an outline of English Botany, besides special lectures on particular plants and animals, adapted to furnish matter for elementary collective lessons.
Scripture -	1	1	Resident Superintendent.	Pinnock's Analysis of Sacred History; Angus's Bible Handbook; Kitto's Palestine.	In addition to the systematic study of the text books, the resident superintendent gives a series of Bible lectures on Sunday morning, in which various Scripture illustrations, oriental manners and customs, &c., are taken up. Special care is also taken to furnish information respecting the evidences of Christianity.
Writing -	1		Resident Superintendent	——	——
Elocution -	2	2	Principal and Vice-Principal.	The ordinary School Reading Books; Allen's Select Poetry; Milton; Shakespeare.	In addition to numerous exercises intended to correct provincialisms, false aspirates, &c., special care is taken to ensure the reading of the Scriptures and of the books used in schools, with just emphasis and intelligence. Some acquaintance with English literature is sought to be conveyed in connexion with the reading of poetry in particular, and information is given respecting the authors, the time at which they lived, and the character of their works.
Euclid - -	1½	1½	Principal -	Potts and Bell's Euclid, Colenso's Exercises.	*First Year.*—The first four books. In addition to this, the Principal gives a series of comments on the propositions, and some insight into the laws of reasoning, which are illustrated by the several propositions. A brief view of the elements of logic is generally given at the conclusion of the course, when the four books have been well studied. *Second Year.*—Fifth and Sixth Books and all Colenso's Exercises on Books I. to IV.
Lineal Drawing.	2½	2½	Drawing master.	Burchett's Geometrical Drawing.	Lineal Drawing. Drawing from models. Geometrical, perspective, and inventive Drawing.

Subject.	Hours per Week. 1st Year.	Hours per Week. 2nd Year.	Teacher.	Text Books.	Remarks.
Music -	1¼	1¼	Music Master.	Hullah's Manual and Hamilton's Catechism of Harmony.	The grammar of music is studied, and some knowledge of harmony also acquired.
Practical Teaching.	6	6	- - -	- - -	Every student is engaged in teaching in the Model School twice in the weeek, under the supervision of the master. Three collective lessons are also given in each week, in the presence of the Principal, and the students, and are subsequently criticised at length by the Principal.
School Management.	1	1	Principal -	- - -	The series of lectures on this subject comprises hints as to the modes of teaching each of the subjects of ordinary elementary instruction, and on numerous points affecting school discipline and general professional success. Some acquaintance with the life and systems of eminent teachers is also imparted in this course.

The foregoing scheme, it should be remarked, provides occupation for the students from 7 o'clock A.M. till 8.30 P.M. on every day except Saturday and Sunday, allowing the usual intervals for meals, and two hours for out-door recreation. On Saturday the classes separate at 1 P.M. No student leaves the premises after the evening classes. Each of the principal teachers,—the principal, the vice-principal, and the tutor,—according to the above plan, which is strictly adhered to, is employed 32½ hours per week in actual teaching. The resident superintendent devotes 10½ hours per week to the instruction of his classes. Monthly written examinations are held, by which each of the principal subjects of instruction is tested in turn, and at the end of each quarter there is a complete examination on all the subjects, which is generally conducted by means of *printed* questions. Such, then, is the outline of the whole plan of study, and the methods taken to test the progress of the students during the course.

Scheme of study.

This scheme of study has been formed so as to meet the requirements of the Government examination, as laid down in Canon Moseley's syllabus. Scarcely any extraneous subjects have been taken up; no attempt has been made to push the mathematical lectures beyond the defined subjects, nor any effort to introduce the *classical* element beyond that passing reference to Latin and Greek roots, which is necessary for a due appreciation of the structure of the English language.

Founded on the Government syllabus.

As the whole course has been conducted so closely in accordance with the syllabus issued by the Education Department, I have been anxious to discover how far that syllabus has approved

itself practically to the judgment and experience of the teachers. I am happy to find that, on the whole, the plan appears to have proved practically available, and to comprehend, for the most part, just those subjects which would have been selected as topics of instruction, independently of any Government prospectus whatever. Nor do I find that any very undue time or attention has, in consequence of the demands of the Christmas examination, been allotted to any one particular subject. The subjects themselves are, undoubtedly, very multifarious, as they appear in the Table; but it must be remembered that most of them had been somewhat closely attended to (by the Queen's scholars at least) previous to their entering the institution, and that, in going through the year's course, they have been, in fact, only *carrying out* the methods and topics of study upon which they had already entered as pupil-teachers.

Unsatisfactory points.

The points which experience seemed to point out as least satisfactory, in working closely up to the Government Examination Schedule, are—(1.) The use of Warren's Blackstone as a text book for constitutional history. A close examination of the details of this work, it appears, has brought to light many inaccuracies both in *law* and in *history*, which are a serious drawback to its usefulness as a text book for examination;—(2.) The want of a more definite text book on mechanics, in which the subject is treated according to the *principles* of the science, instead of being cut up into a multiplicity of formal rules for calculating mechanical forces, that must be retained by the sheer force of memory.

Student

I come next to the students themselves, their numbers and classification. The following is the statement put forward in the Annual Report of the Society last April:—

Number of students attending the classes during the year ending April 1st - - - - - (These of course include the two years sets.)	141
Entered during the same period - - -	76
On the list, April 1st, 1855 - - - -	65
Submitted for examination for certificates of merit -	47
Obtained certificates - - - - -	41
Queen's scholars admitted - - - -	38
Appointed to schools - - - - -	59
Withdrawn from various causes - - -	7
Died - - - - - - -	2
On the list, April 1st, 1856 - - - -	72

On the week of inspection I found the numbers actually attending as follows:—

Second year students - - - - -	10
First year students - - - - -	59
Total - -	69

This shows a considerable advance upon the state of things this time last year, when there were in the house only seven students of the second year's standing, 42 preparing for the first

years examination, and 25 forming a *general class*, who did not contemplate passing the Government examination at all. The *general class* has now happily entirely disappeared, and the number who are now preparing to enter upon a second year's course after Christmas is much greater than before.

Division into classes.

In place of the general class, the whole of the first year's students are now divided into three sections according to their relative proficiency. The time-table of the institution accordingly is planned for *four* distinct classes (the second year students, and the three sections of those belonging to the first year), who for the most part receive their lessons separately. This plan necessitates long hours and much additional labour for the teachers; each one of them is engaged, as I before stated, 32½ hours weekly in actual teaching, beside the time taken to superintend the private studies of the pupils. Nothing, I am well convinced but the sincerest desire for the progress of the students, and an honourable pride for the success of the institution, could have induced them to frame a plan of study so laborious to themselves, and so minute in its attention almost to the individual mental wants of those committed to their care. More complete supervision is, no doubt, secured by this great subdivision than could possibly be secured otherwise; but I would suggest, for the sake of the officers themselves, whether there are not some of the topics in which the sections could be partially combined, so as to leave them a little more time and relaxation from their now too arduous duties.

Female department.

I turn now from the male to the female department. The general female superintendent of the whole is Mrs. MacRae, the only person now left upon the establishment who was there at the time of Joseph Lancaster himself, and has witnessed the whole series of its transformations. In addition to the general superintendence, she also gives conversational lectures on the practical duties of teachers. The school management department, the geography, reading, writing, and needlework are under the care of Miss Sheppard. The history, domestic economy, book-keeping, natural history, and infant system, are under the care of Miss Scott. The departments of English grammar and arithmetic are allotted to Mrs. Bennett. The Scripture lessons are divided amongst some of the different teachers, and a general superintendence is exercised by Mr. Saunders. Another important feature in the plan is the arrangement by which all the female students receive three lessons weekly from the Principal (Mr. Fitch), one in the art of teaching, one in arithmetic, and one in grammar. The whole course through which they are conducted during the year, and the average amount of matter which it is expected that each student will be able to accomplish, will be seen from the following Table:—

Subject.	Hours per Week. 1st Year.	Hours per Week. 2nd Year.	Teacher.	Text Book.	Remarks.
Geography -	3½	3½	Miss Sheppard	Cornwell's Geography; Hughes' Physical Geography.	*First Year.*—It is expected that the class will have a good general acquaintance with the characteristic features, climate, soil, and chief productions of the great divisions of the earth. A more detailed account of the British Islands and Colonies, as well as a tolerably full knowledge of the chief countries having commercial dealings with Great Britain. There is a lesson given weekly in Physical Geography, notes of which are taken and reproduced as written exercises, a map or diagram illustrating the lesson being added. *Second Year.*—The students of this year add to the course stated above information respecting the nature of the causes influencing climate, variety of production, industrial pursuits of the people, &c. The information on such points obtained from two sources: books placed at their disposal, and notes of lectures they receive weekly. They are also required to prepare outlines of lessons on all the subjects stated, carefully illustrated with maps or other suitable diagrams. The course in Descriptive Geography is almost confined to the countries of Europe taken separately; and a recapitulation of the geography of the British Islands and Colonies.
History - -	3	3	Miss Scott -	Milner's History -	The course in this subject embraces the chief events of each reign from Egbert to the present time, in chronological order. The most important eras of civil and religious liberty. The military and naval affairs of each period, with an outline of the arts and improvements of each century; also the lives of the eminent men of each period.
Domestic Economy.	3	3	Miss Scott -	Tegetmeire and Household matters	Some account of the substances used as food by man, with the modes of their preparation, and the estimate of expenditure for each method. The duties of servants: manner of performing household duties, and the general treatment of common disorders.
School Management.	3	6	MissSheppard	Dunn's Principles of Teaching.	This subject embraces the remark made upon the practical teaching under supervision; the critical lessons given by students, with the criticisms by part of class and teacher; the mode of imparting information in various subjects taught in elementary schools; the method of government and discipline; various plans for the improvement of schools, as children's attendance, parents' co-operation, habits of children. *Second Year.*—The students of this year are allowed to read on various points connected with the subject at appointed times, for the purpose of writing abstract and essays on questions connected with school management. Both classes receive the benefit of Mrs. MacRae's valuable experience on organization, relative duties of teachers to managers and committees, given in a kind of conversational lecture once a week.
Practice in Teaching.	7½	3	- -	Hand-book to Model School.	

Subject.	Hours per Week. 1st Year.	Hours per Week. 2nd Year.	Teacher.	Text Book.	Remarks.
Lecture -	1	1	Mr. Fitch -	- - -	In addition, a lecture is attended by the whole of the female students, given by the Principal of the male department.
Infant system	1½	1½	Miss Scott -	- - -	This system is taught by lectures and series of criticisms. Lessons to inculcate the principles and objects of infant training; the methods by which these principles can be carried out, with notes of lessons on subjects suitable to young children, and a knowledge of infant school furniture and apparatus.
English language,	4½	4½	Mrs. Bennett	Cornwell's Grammar and Composer, Latham, Morell.	*First Year.*—It is required of this class to paraphrase, analyze, and parse selections from the best authors; to make a general acquaintance with the principal poets who have lived at various periods, and to know the etymologies in Cornwell's grammar. *Second Year.*—The course for this class is an extension of that named above, the passages selected being more difficult (chiefly from Milton).
Lecture -	1	1	Mr. Fitch -	- - -	They also receive a lecture every other week from Mr. Fitch.
Arithmetic -	½	4½	Mrs. Bennett	Cornwell and Fitch's Arithmetic.	A series of lessons is given to all the sections on the principles of arithmetic, and the students are required to give systematic exercises on these, and in practice, proportion, and fractions.
Lecture -	1	1	Mr. Fitch -	- - -	In this subject they also receive a lecture weekly, for eight months of the year.
Reading -	1½	1½	Miss Sheppard	Lesson Books, Select Poetry, Dunn's Principles, Lord's Modern History.	This subject receives much attention, and care is taken that all exercises tending to correct provincialisms, to improve the tone of voice, to give expression and general styles are adopted, so that accuracy and ease may be the marked results.
Writing -	1½	1½	Miss Sheppard	Darnell - -	A bold, free hand is the object aimed at, to obtain which frequent exercises are given on unruled paper, and the use of chalk and black-board is encouraged.
Needlework	1½	1½	Miss Sheppard	-	In this department great stress is laid upon *neatness* and *finish*, rather than quantity, though despatch is strongly urged. The object of the class is, that garments should be cut out economically and fitted properly.
Book-keeping	½	½	Miss Scott -	- - -	The system of single and double entry, with specimens of each book used.
Natural History.	1	1	Miss Scott -	Chambers	Animal kingdom, with the structure and characteristics of the animals belonging to each sub-kingdom, dwelling more especially on the habits and organization of those belonging to the orders mammalia.
Dictation -	(1 Div.) 1	0	Miss Scott -	- - -	In this, Lower Division of 1st year students.
Lessons on common things.	1	0	- - -	- - -	The Lower Division of first year class subjects chosen from lesson books.

Subject.	Hours per Week. 1st Year.	Hours per Week. 2nd Year.	Teacher.	Text Book.	Remarks.
Drawing -	2½	2½	Miss Channon	- - - -	Model and linear, with lectures given in perspective.
Singing -	3	3	Miss Tomlinson.	Hullah's Manual; Crampton's School Songs, Bible Chants.	The students are instructed thoroughly in the principles of music, as contained in Hullah's Manual; the second year students learning also the first principles of harmony. They all learn enough of the same to enable them to pursue it as a study after they leave, and are expected to be able to sing from sight, and teach their girls school songs in part.
Scripture -	1½	1½	Miss Scott -	M'Leod's Palestine,	Both classes have the same course; Scripture reading and interrogation, Bible geography and history.
			Miss Sheppard	M'Leod's Palestine, Kitto's Palestine, Bible Handbook.	The second year students, in addition, write notes on various subjects connected with Bible history, biography, manners and customs of the Jews.

Numbers.

The number of female students who have been in the institution during the present session is 90; the number actually present on the week of inspection was 73. Of these, 10 were second year students, 48 were preparing for the first year's examination, and 15 only were what are termed *general students.* This also shows some improvement on the state of things last year; the number of second year students is doubled, a somewhat greater number are also preparing for the first year's certificate. The preponderance of first year students is still, however, so great, that no very distinctive second year's course has yet been adopted, although the subjects taught completely cover the ground required for the Government examinations.

Concluding remarks.

In closing my report I must express the strong feeling of satisfaction which I could not but entertain in witnessing the energy, the activity, the unwearied effort for the progress and improvement of the students, which characterized the whole institution. No pains appear to be spared either in the male or female department to make the year's course as conducive as possible to the benefit of those for whom it has been constructed. In addition to the courses of lectures (all combined with constant written exercises and daily examinations) through which the students pass, they are all occupied a certain number of hours weekly in practical teaching, so as to make their stores of knowledge as available as possible for their future destination in life, and render them well appointed instruments for the elevation of the rising community of our country. As I had immediately previously to my inspection of the institution visited some of the normal schools of France, I could not but

be struck with the immense advantage we derive from the present pupil-teacher system. There the course of study is generally longer, but far less complete and extended than ours; the first year has to be occupied with the most elementary subjects, owing to the want of previous preparation in the students, and the government examinations at the close of the course is not pitched as high by *one half* as it is in this country.

An admirable foundation is, in fact, being laid by our present training institutions for a thorough system of national education, and if such a system be eventually realized, not the least of the credit will be due to such institutions as this, under whose care the system of training has been fostered, and who have responded by their efforts as well as their good intentions to every plan of improvement which has emanated from the government of the country.

I have the honor to be, &c.

J. D. Morell.

To the Right Honorable
The Lords of the Committee of Council on Education.

REPORT *on the* WESLEYAN TRAINING COLLEGE, *in the Horseferry Road, Westminster, by Her Majesty's Inspector of Schools,* MATTHEW ARNOLD, Esq., M.A.;—*for the Year* 1856.

MY LORDS, London, January 1857.

I HAVE the honor to present to your Lordships my Report for the year 1856 upon this institution, which I visited in the week commencing on the 24th of November last.

Former reports.

Mr. Bowstead's Report for last year, that of Mr. Morell for 1854, and my own for 1853, contain information respecting the first establishment and the general arrangements of the institution which it is unnecessary here to repeat. The modifications in the original plan of study in the training department, which the introduction of a second year's course of training rendered necessary, had not, indeed, actually been carried into effect when Mr. Morell visited the institution in 1854; but they had been already considered and determined upon, and his report contains the modified plan of study as then proposed, and which has since been successfully carried into operation. The staff of officers in the training department of this institution has undergone, since the date of Mr. Bowstead's Report, little change. Mr. Langler, lately the admirable master of the infant school which forms one of the practising schools here, and, after that, selected to give special training in infant-school methods to the female students, obtained at Easter last a lectureship in geography under the Minute of 20 August 1853, and is thus the second lecturer under that Minute employed in this training college. Mr. Kinton obtained a lectureship in English literature at Easter 1854, with the distinction of being the only successful candidate in that branch. I was present at lectures delivered by both Mr. Kinton and Mr. Langler, and heard them with great interest; the former is a genuine student, the latter a lecturer of more than ordinary attractiveness. Mr. Conrad Cox, the mathematical teacher here, will probably present himself as a candidate for a lecturership in mathematics in the present year. And should a plan, which has been proposed, of establishing lectureships in method, in addition to the now existing lectureships in special branches of instruction, be carried out, this institution possesses in Mr. Sugden, the head master, a candidate peculiarly well qualified for such a situation. Mr. Sugden has, in fact, long been a lecturer on method, on the science which teaches the best modes of imparting acquired information, on the theory and practice of teaching, to the students of this institution; it has been with him a subject

Officers of training department.

Lectureships on method.

of predilection; and in the absence of recognized English text-books of signal merit on this difficult subject, it is above all things necessary that the teacher who deals with it should be a man with a natural aptitude and predilection for it, as he has himself, if not to invent, at least to combine from a multitude of scattered sources the principles of his science, which he cannot at present find anywhere ready combined and ready prepared for his use. He must, in fact, on this subject be not a learner only, but an inventor also, before he can efficiently teach it.

Study of physical science.

In compliance with a growing demand for additional facilities in the study of physical science, a laboratory has been formed and fitted up in a convenient room in the college, where Mr. Sugden lectures on experimental science to the students.

Appointment of a mistress of female students.

The authorities of the institution have engaged the services of Miss Sarah Goodfellow, lately employed in a school at Leeds, as mistress of the female students. It was thought desirable that these students should have the benefit of the undivided care and superintendence of a person of their own sex. At the same time no change has been made in that excellent system by which, in this training school, the female as well as the male students receive their intellectual instruction from teachers of the male sex; the duties of the mistress are to teach needlework, and to give to the female students the benefit of her general supervision, companionship, and sympathy.

There has been no other change in the officers of the training department.

Success of students in examination of Christmas 1855.

With regard to the success of their labours in the instruction of the students, the records of the last examination of which the results are yet known, of that of Christmas 1855, supply the best test. By the returns published, it appears that of fifty-one male candidates (thirty-four of the first year, seventeen of the second year) forty-eight were successful; of thirty female candidates (twenty-three of the first year, seven of the second year) twenty-six were successful. There were, however, in fact, only fifty male candidates, as one of the candidates of the second year was taken seriously ill at the beginning of the examination, and withdrawn. The per-centage, therefore, of successful candidates in the male training department at Christmas 1855, was really ninety-six. This per-centage was not exceeded in any training institution in the country. In the female department, the per-centage of successful candidates was 86·66. These honourable results of the examination of 1855 may well gratify the authorities of the Westminster institution, and inspire them with the best hopes for the future.

compared with their success in former examinations.

Let these results be compared with the results of former examinations. To take, first, the male training department. In this department the successful candidates formed, in 1852, 60 per cent. of the whole; in 1853, the successful candidates formed 48·4 per cent. of the whole; in 1854, they formed 82 per cent. The per-centage of successful candidates in 1855 was, as has been already stated, 96, exceeding that of any previous year by 14. In this department, then, in which the improvement in 1854 had been very great indeed, the improvement in 1855 was still considerable.

Female students.

Let us now turn to the female training department. Here, in 1852, the per-centage of successful candidates was 45·45, in 1853 it was 33·3, in 1854 it was 47·2, in 1855 it has risen, as has been shown, to 86·66, nearly doubling any former per-centage. This is an advance which does, indeed, deserve notice, and it goes far to show that effective training may remedy in great measure the disadvantages under which the female students were supposed as a whole, when compared with the male students, to labour; namely, that far fewer of the former than of the latter had enjoyed the advantage of having been pupil-teachers before they entered the institution as students; and also that female students, not having been pupil-teachers, are generally found, on their entrance into the institution, even less well-prepared than male students in the same case. With respect to the latter of these two grounds of disadvantage, I say nothing; with respect to the former, it is true that of the female students a much smaller proportion have been pupil-teachers than of the male students. The reason of this is mainly to be found in the system of mixed schools adopted by the Wesleyans. They have very few girls' schools, and a great source of supply of female pupil-teachers is thus cut off. Those who are found in the institution are contributed chiefly by infant schools; for, in mixed schools, the number of boys employed as pupil-teachers greatly exceeds that of girls.

Result of recent examination.

With the result of the last examination, that of Christmas 1856, I am not yet, at the moment at which I write, fully acquainted; the returns will, I hope, reach me in time for insertion at the end of this report. I fear, however, that they show that the high standard of 1855, which has been fully maintained by the male candidates from this training school at the recent examination, has not been equally well maintained by the female candidates.

Mixed-school system in relation to qualification of female students.

I have remarked above that a much smaller number of the female than of the male students have been pupil-teachers, and that, consequently, it is not to be expected that the former, as a body, should show so well in an examination as the latter. This inferiority in the number of female pupil-teachers supplied to the Wesleyan institution as students arises, I have said,

out of the Wesleyan system of mixed schools. With that system I am well content; I should be sorry to see it disturbed. I note, therefore, with pleasure, any fact which indicates, as the result of the examination of 1855 indicates, that well-prepared female candidates can be obtained in the Wesleyan training school for examination and for future employment in schools, even under the condition of their present mixed-school system; that the disproportion between the success of the male and that of the female students need not *necessarily* be considerable; that it has, on one special occasion, been conspicuously reduced. The result which has been obtained before may be obtained again; and *a return to the per-centage of* 1855 must be resolutely aimed at, for their female students, by the authorities of this institution.

Religious instruction.

The religious instruction in this institution, although not under my official inspection, forms so important an element in the system of training that I append a specimen of the examination papers in religious knowledge which are set regularly every year by the authorities of this institution to their own students, in lieu of those set by the Committee of Council for candidates in Church training colleges only. (*See Appendix* A.) These papers were set at the end of 1855. The answers to the questions are read and estimated by examiners appointed for that purpose, and a class-list of those who distinguish themselves by the goodness of their answers is drawn up and inserted in the Annual Report of the Wesleyan Education Committee. The examiners mention with special praise the answers of many of the female students.

Fortnightly examinations.

Having mentioned this instance of action independent of the examination appointed by the Committee of Council, I will mention an instance of action designed specially to stimulate and prepare students for that examination. Once every fortnight each student is required to work a printed examination paper on a subject forming part of the year's course. The whole course is gone through in this way. The papers are marked and valued, and a list of the students, arranged according to the merit of their answers to the paper last set, is posted up every week in the hall. This practice has now existed for two years. Of these fortnightly papers also I append a specimen. (*See Appendix* B.)

Students' fees.

The fee charged to students in this training college has been raised. Formerly it was a fee of 15*l.*; it is now 23*l.* for male students, and 17*l.* for female. With this increased fee, however, the institution provides every student with medical attendance and washing, as well as with board, lodging, and tuition as formerly. The training department of the institu-

Numbers in institution.

tion, designed for 100 students, sixty male and forty female, is now always full at the commencement of each year; although, before the year is ended, illness, or the supply of temporary teachers to schools, has generally reduced the number a little below its full complement. At the beginning of 1856 there were in training here 101 students, fifty-nine male and forty-two female. Forty-five of these were remaining from 1855; four had returned to the institution for a second year's study; one had entered under that Minute of your Lordships which offers scholarships to certificated teachers who have had one year's training only; twenty-seven (nineteen male students, eight female) had obtained Queen's scholarships at the Christmas examination of 1855; and twenty-four (eleven male students, thirteen female) had been newly admitted as ordinary students. The authorities of the institution honestly present for examination at the end of each year not a selected number of students only, but the entire number of those qualified to be candidates. On my inspection in November last, I found ninety-two students about to be presented at the approaching examination; of these, fifty-six were male students (twenty-seven of the second year, twenty-nine of the first); thirty-six were female students (fifteen of the second year, twenty-one of the first.) Of the fifty-six male students in preparation, forty-three had been pupil-teachers; of the thirty-six female students, owing to the causes mentioned above, I found that not more than one-half had been pupil-teachers.

Practising schools.

Of the practising schools attached to the institution, an account will be given in my Tabulated Reports, printed separately. Of them, therefore, I will only say, that they improve in efficiency, and that the number of scholars in attendance continues to increase. The senior practising school, under the care of Mr. Bell, which was long short of scholars, has now obtained its intended complement of numbers, and a definitively settled form and organization. The model school and the junior practising schools are in very good order. The girls' industrial school is at present somewhat suffering from the unsettlement produced by a change of teacher. Mrs. Rogers has resigned the charge of this school, which has been committed to the care of Miss Brown, previously employed in the infant school. The infant school has been placed under the charge of Mr. Bailey, one of those teachers in whom Mr. Stow's example and training have borne excellent fruits. I was interested by finding that Fröbel's plan of the Kinder-Garten, a charming mode of occupying and instructing little children, had been introduced into this model of an infant school. In the teachers of the

senior and junior practising schools, and of the model school, there has been no change.

The following balance-sheet will show the financial condition of the institution for the year ending March 1856:— Financial condition of the institution.

Account for the Year ending 31 December 1855.

Dr.	£	s.	d.		Cr.	£	s.	d.
To Students' Entrance-Fees	519	3	8		Normal College.

Audited and found correct, March 4, 1856.

(Signed) { JAMES HOBY, THOMAS KNIGHT.

The debt on the institution (originally 2,145*l.* 7*s.* 4*d.*) had been reduced at the date when this balance-sheet was published to 903*l.* 1*s.* 2*d.* It was published in March last, and the debt is now, at the date of my present report, almost entirely extinguished. Even with this debt upon them, however, the Wesleyan Education Committee had made, during the year ending on the 1st of March 1855, twenty-five grants, amounting in the whole to 530*l.*, to different schools in connexion with them. At that date they had in operation 417 schools, with a total number of 45,168 scholars in attendance in them. During the year then ending there had been an increase of nearly 4,000 in the number of scholars in attendance at their day schools; seventeen new schools, with accommodation for nearly 3,000 children had been opened; three schools which had been closed were re-opened; seven schools considerably enlarged. The sphere of their activity has not been confined to large towns and populous localities; but they have been peculiarly useful by establishing village schools in remote parts of the country, where they were much needed. Operations of Wesleyan Education Committee.

In 1855 was instituted a meeting, to be held annually in London in the month of May, on behalf of Wesleyan education; and I am glad to see that in the resolutions of this meeting great stress is laid on the establishment of *day-schools*. This is, indeed, in strict conformity with the desire manifested of the plan of education sanctioned by the Wesleyan Conference in 1841, that "all possible care and effort should be used in each district to promote the formation and Disproportion between extent of Wesleyan operations in day-schools and that in Sunday-schools. Efforts to reduce this.

success of *week-day* and *infant* schools;" but still the number of 45,000 scholars in attendance in Wesleyan *day-schools* bears far too small a proportion to the number of 400,000 scholars in attendance in Wesleyan *Sunday-schools*. But the Wesleyan Education Committee have shown that they are alive to the urgent need of reducing this grave disproportion; a disproportion, be it remarked, which does not exist in the school operations of their missions. I cordially unite with them in the hope that the extinction of their debt, and a growing sense, among the members of their connexion, of the necessity of promoting the *day-school* no less zealously than the *Sunday-school*, may enable them to extend their operations in the establishment of schools. So long as the present denominational system of schools shall continue in force, there is no school system to which I wish success more sincerely than to theirs. They have made and are making the greatest efforts for the promotion of a system of infant-school education; they desire that the time may come when every scholar received into the older school should have previously received a training in the infant school. With those efforts, and with that desire, I heartily sympathise. They have, in my opinion, most sensible views as to the management of infants; what I have sometimes heard made a matter of reproach against their infant schools, that they are *play-schools*, is really, in my opinion, the highest praise; it means that "they do not seek to develope prematurely and forcibly the faculties of the mind not developed in the young child, but employ their attention mainly in the direction of faculties which nature teaches the child vigorously to put forth, perception, observation, and curiosity."* Their infant-school system, accordingly, is in my opinion a healthier and a more successful one than that of any other educational body. But, besides this, their school system has, in my judgment, as at present conducted, another signal merit, of especial value under present circumstances, where the work of elementary education is carried on, not by the regulation of a central authority, but by a process of co-operation and mutual effort between the Committee of Council and the different educational bodies. Those at the head of the Wesleyan school system appear to me, I am bound to say, to conduct its operations in a spirit singularly free, so far as their dealings with the Committee of Council are concerned, from all jealousy and hostile mistrust; in a spirit which may truly be called *peaceable and easily entreated;* in a spirit which proves, I hope, the conscious-

Wesleyan infant schools.

Dispositions manifested by those at head of Wesleyan education,

* From an "Address to the Students of the Wesleyan Training Institution at the commencement of the Session of 1856," by the Rev. John Scott, the principal.

ness in them that they have been fairly dealt with by the Committee of Council, and which certainly renders it a matter of pleasure, rather than of difficulty, to deal with them. I find, also, this spirit eminently present in the great body of Wesleyan teachers with whom I have to deal; I believe that it is a spirit fostered in them by their training, nay, by the principles and tendencies of Wesleyanism itself. Their training is studiously addressed to "form in them habits of right feeling and of good conduct, as well as of correct thinking;" to develope in them a spirit of peaceableness and affectionateness; "the spirit of teaching for the good of others as well as for their own livelihood."* They are exhorted to labour, "not only that they may have their schools in a creditable state at the visit of the inspector, but that their scholars, when they come to be men and women, may remember their school-days with pleasure, may think of their teacher with affection and mention him with honour, when blue-books are shelved and forgotten."† This is the spirit which, I truly believe, those who conduct the Wesleyan training institution do their best to develope and to promote; it is with sincere pleasure, therefore, that I report to your Lordships the improved efficiency of its secular instruction, and the continued growth of its prosperity. and by Wesleyan teachers.

I have the honor to be, &c.

To the Right Honorable
The Lords of the Committee of Council on Education.

MATTHEW ARNOLD.

APPENDIX A.

WESLEYAN TRAINING COLLLEGE, WESTMINSTER.

CHRISTMAS EXAMINATION, 1855.—RELIGIOUS KNOWLEDGE.

I.

(*Three hours allowed for this Paper.*)

1.—DIVINE REVELATION.

1. Show the necessity of a revelation of truth, and the publication of a moral law from God to man.
2. State by whom the Holy Scriptures were given, and give your reasons for regarding the authority by which they were given as Divine.
3. Prove from the Bible that the ten commandments are still in force.
4. Describe the extent to which the moral law of God is obligatory on man.
5. Specify some truth that is first perfectly disclosed in the New Testament.
6. Is a perfect fulfilment of the law of God possible? By whom? And who are benefited thereby.

2.—DOCTRINE OF HOLY SCRIPTURE.

1. What do the Scriptures teach concerning the being and attributes of God? *Answer this and the following questions as nearly as you can in the words of Scripture.*
2. What do the Scriptures teach of the person of our Lord Jesus Christ, and his mission to the world?
3. What must a sinner do to be forgiven and saved?
4. What evidence can a sinner have that he is forgiven?
5. What is the change that such a person has undergone? And what does God then require of him?
6. What will be the state of such a person after death? And what the state of an impenitent sinner?

---

* From the "Address" quoted above. † From the same.

II.

(Three hours allowed for this Paper.)

3.—Biblical History and Geography.

1. Give some proof of the unity of the human race, and name the first grand divisions of mankind, as recorded in the Old Testament.
2. Endeavour to show the identity, and also to mark the successive changes of the Sabbatic Institution, in the Primitive, the Mosaic, the Jewish, and the Christian times.
3. Name the chief religious sects, and the political parties in Palestine in the time of our Lord and his Apostles.
4. Mention the chief points of contrast in the state of Jerusalem during the time of our Lord's ministry and at the present day.

4.—School Teaching.

1. What are the moral qualifications indispensable in a teacher?
2. State what means you would employ to restore order to a school that had been neglected.
3. How would you proceed to conciliate and to preserve the confidence of the parents?
4. How would you awaken and keep up a right religious feeling in the children?
5. Can you say what would be the best means for so husbanding your energies as to give the utmost attention to the school, cultivate your own mind, keep it in a right state, and preserve your health?

Appendix B.

CHRISTMAS EXAMINATION; 1855.—SCHOOL MANAGEMENT.

One Question only to be answered in each Section.

Male Students, First Year.

Section I.

Write the words "School Management" in text hand, and the words "Habits of Industry are best for youth" in small-hand, such as you would use in setting copies.

Section II.

1. State the principal divisions of school method as referring:
   (*a*) To the number of children taught at once.
   (*b*) To the mode of presenting the subjects of instruction to the children.
2. In drawing up a time table for a school, what are the matters chiefly requiring to be considered? Construct a time-table for a school of 80 children, having only one pupil-teacher.
3. Compare the relative importance of the various subjects belonging to elementary education, giving reasons for your opinion in each case.

Section III.

1. In planning the organization of a school, what would be the matters chiefly needing consideration?
2. Draw a plan of a school fitted up for 120 children to be taught with the aid of pupil-teachers, giving the dimensions of each of the main portions of it.

Section IV.

1. How would you proceed, if called upon to open a new school, without any assistance?
2. Draw up a time-table, showing in detail the times you would allot to the subject of reading and spelling, and the agency by which you would have every such lesson given in a school of 100 children, with two pupil-teachers.

Section V.

1. What are the principal methods you would employ in the teaching of spelling?
2. Supposing a school to be divided into three sections, give an outline (with reasons for each step) of the mode in which you would conduct a reading and spelling lesson in (*a*) the lowest division, (*b*) (the middle division), (*c*) the highest division.

Section VI.

1. Draw out a time-table, showing the details of the arrangements you would adopt in teaching arithmetic in a school of 120 children, with three pupil-teachers.
2. Give details of the principal arrangements you would adopt in order to secure neatness and orderliness in the school and playground. Show the bearing of these on the moral training of the children.

Male Students, Second Year.

Section I.

The same as for the First Year.

Section II.

1. What are the principal faculties of the human intellect according to the metaphysicians of the Scottish school? Point out the chief characteristic of each faculty.
2. Write the notes of a lesson on any secular subject, specially illustrating the manner in which the processes of abstraction and generalization and the laws of association may be made available in the instruction of children.

SECTION III.

1. Give a general view of the moral constitution of the human mind. How may knowledge of this kind be applied to the purposes of the educator?
2. What ought to be the aim of the educator in regard to those parts of our moral nature which have been called "springs of action?" Support your answer by such arguments as occur to you.

SECTION IV.

Write a brief essay, showing the importance of "habit" in education.

SECTION V.

1. Describe the nature of the three kinds of register-books in use in the model school of this institution, viz.,—(*a*) the entrance book, (*b*) the class register, (*c*) the annual summary. What points is each intended to snow?
2. Draw out a fictitious table representing the probable attendance in a class of twenty children, and the mode in which the various particulars are recorded in the class-register. Make up the table so as to show, not only the daily record, but also the summaries for the week, ready to be transferred to the quarterly summaries.

SECTION VI.

Give a summary of one of the lessons in McCulloch's "Course of Reading," on
1. Water.
2. Evaporation.
3. The process of nutrition.

N.B.—The 5th Section must not be wholly omitted by any student.

REPORT, *by Her Majesty's Inspector of Schools*, T. W. M. MARSHALL, Esq., *on the* ROMAN CATHOLIC TRAINING COLLEGE *of St. Mary's, at Hammersmith;—for the Year* 1856.

MY LORDS, January 1857.

In reporting last year upon the state of this Institution, and the work in progress of accomplishment in it, I noticed the important extension which it was designed to give to the then existing buildings. A plan of the proposed new construction, supplied by the architect, was appended to my report. I am glad to be able to state that the work then contemplated has been successfully completed, and that suitable accommodation is thereby provided for fifty students. Completion of new buildings.

It is due to the architect, Charles Hansom, Esq., of Clifton, to say, that the beauty of the design, and the skilfulness of the general arrangements, are highly appreciated by all who have visited the new building. The dormitories are of ample dimensions, lofty, well lighted and ventilated, and of convenient access. The lecture rooms, one for the first and one for the second year students, are spacious halls, unexceptionable as to size and character, and judiciously arranged for the use to which they are to be applied. They are immediately connected by a handsome corridor with smaller but excellent class rooms for the study of music, drawing, and physical science. The chapel supplies adequate accommodation for all the inmates of the house, and is certainly, as it ought to be, the most beautiful feature of the institution. The refectory, lavatory, recreation room, and offices are all that can be desired. Without entering into superfluous details, it may suffice to say, that the buildings are of admirable form and design, skilfully adapted to their special object, and every way worthy to be the scene of the important labours which will henceforth be carried on in them, and of which they are the necessary and appropriate accessories. I am unwilling to terminate this brief allusion to the character of the buildings, without adding, that if the architect has fully maintained his high reputation by this new and successful work, no little praise is also due to the respectable builder employed by him—Mr. Henry Williams, of 50, Broadmead, Bristol—who has performed the duty entrusted to him with an amount of conscientious care and practical skill which seems to call for special notice. Persons more competent than myself to estimate merit of this kind have been good enough to direct my attention to it, and especially to the finished character of the details, and the beauty and solidity of the general work. Their character.

Proportion of new students to increased accommodation.

With the aid of your Lordships, and the munificent co-operation of the *Roman Catholic Poor School Committee*,—who may justly point to this admirable building as a sufficient monument of their zeal and liberality, and of the solid services which they have rendered to the cause of public education,—another training school has now been erected, another home provided for a class of students in the success of whose future labours the country at large is deeply interested. It is very satisfactory to me to add, that the number of students now in residence has developed in proportion to the increased accommodation provided for them. Although, for reasons which are not likely to operate hereafter, more than half the pupil-teachers in my own district who completed their apprenticeship in 1856 failed to present themselves as candidates at the Christmas examination, yet the number of students is already *forty*, of whom *twenty-six* are Queen's scholars. Of the whole body who were examined for scholarships *ten* failed to satisfy the conditions; and I am so far from wishing to conceal this mortifying fact, that I propose to offer some remarks upon it.

Unsuccessful candidates.

I may venture to say, in the first place, that I heartily concur in the justice of the decision which rejected them as unworthy to be Queen's Scholars. I reviewed some of the papers worked by the unsuccessful candidates, and wish to record my opinion that they reflect infinite discredit, not upon the rejected students, but upon the teachers by whom they were (nominally) trained during the course of their apprenticeship. Three of them came from the same school, the managers of which, I should hope, will demand a strict account from the master. Even in the arithmetic papers they were far surpassed by the female candidates from my own district, most of whom worked all the difficult arithmetical processes by algebra, of which only a small proportion of the males showed any adequate knowledge. It is certainly a significant fact, that while all the female candidates in my district were successful, and sixty per cent. of their number obtained the first class, the only failures were amongst the males. This circumstance, though probably opposed to the experience of most of my colleagues, does not occasion me the least surprise. It only confirms an opinion which I have long entertained, and which is founded upon ample experience and observation, that the female teachers of schools under my inspection are, as a class, and admitting rare exceptions, immeasurably superior to the males, not only in purity and elevation of motive and patient laborious charity, but even in intellectual vigour and scientific attainments. This fact has always been apparent to me, and I was never less disposed to doubt it than at the present moment.

On the other hand, the recent examinations at the training school to which this report refers attest the meritorious industry and assiduity of certain schoolmasters, whom I beg permission to name. Edinburgh has sent candidates who are at the head of the list both of males and females; and no wonder, since they had the advantage of being trained by such conscientious and capable teachers as Mr. Donlevy, of St. Andrew's, and Mrs. Durie, of St. Mary's, schools, in that city. With respect to the former, whose merits I had formerly opportunities of appreciating, I observe with pleasure that my colleague, Mr. Stokes, reports that he is "perfectly satisfied with the results of his exemplary labours." Mr. Merchant, of the Trenchard Street School, Bristol, a very diligent and active schoolmaster, has the credit of supplying the second successful candidate; and Mr. Capel, of St. Mary's, Hammersmith, in whom are united all the most valuable qualifications of a successful teacher, and especially sober enthusiasm and patient charity, has trained the third. The masters of St. John's, Wigan, and St. Peter's, Aberdeen, appear to belong to the same worthy class; and the intelligent teacher of St. Joseph's, Bilston, has sent two good and promising students. The success of the *female* candidates from my district is easily accounted for, by the fact that, with a solitary exception, they were trained by ladies who are members of religious communities, and especially by those invaluable orders, the Sisters of Mercy, and the Sisters of the Holy Child.

Successful candidates.

I think it right to observe, both because it affords a remarkable testimony to the excellence of the instruction at the Hammersmith Training School, and suggests some consolation even with respect to the recent failures in the examination for Queen's Scholarships; that all who have been considerately admitted by the principal into that institution in former years, notwithstanding their want of success as candidates, obtained the certificate of merit at the end of the first year. Nothing could more clearly indicate the skill and patience of the officers of this training school than that in twelve months they had so successfully supplied the defects of previous imperfect training, and enabled even an unpromising class of students to convert a discreditable failure into an honorable triumph.

Final success of rejected candidates.

I cannot, however, but strongly feel, that in this, as in all other training schools, there is, and must continue to be, an almost incurable evil, which deserves careful consideration, and may be rudely defined as *an unavoidable waste of teaching power*. I beg permission to explain the meaning of this phrase, and to suggest a remedy for the evil to which it points. For some time past, by direction of the Committee of Council, an exact record has been published annually of the proportionate averages of marks, "good," "fair," &c., obtained by

Waste of teaching power.

the students in the various training colleges. The tables which convey this information are probably designed to indicate the degree of success exhibited in the different subjects of instruction at these several institutions. Such statistical tables have, no doubt, a certain definite value, and will naturally be consulted by persons interested in the progress of public education, and especially by the officers of the various normal schools. But I venture to submit, that they must not be taken for more than they are worth; and that if the conclusions which they seem to suggest be too rigorously adopted, they will certainly tend to diffuse erroneous impressions. There may be, in a particular college, a formidable per-centage of "moderate" or even "indifferent" papers, without the slightest fault on the part of those who are charged with the office of teachers in it. What I have called *waste of power* must be taken into account. And this waste is occasioned, I presume, by the imperfections, not of the lecturers, but of a certain proportion of the students to whom their lessons are addressed.

Illustrations of this waste.

It may not be inexpedient to notice one or two illustrations of this lamentable but unavoidable waste of power, and this may be done, I conceive, without incurring the reproach of indiscretion, or the still more serious charge of breach of confidence. If there is one subject of elementary instruction in which uniform success might be more fairly anticipated than in another, and which might be assumed to be taught with almost universal accuracy and precision in male training schools, that subject is arithmetic. Now it is a significant and conclusive evidence of that waste of teaching power to which I have alluded, that out of 450 arithmetic papers worked at one of the annual examinations only two were marked "excellent." Again, in a training college which has quite a special reputation for the unusual care devoted to the study of geography, and the great ability with which that subject is handled, although the students, on the whole, appeared to surpass in this branch of knowledge those of most other colleges, yet the number to whose work the distinction of "good" was attributed was only 26 per cent. To apply these remarks to the training school with which I am especially concerned in this report. It seems simply an act of justice to the excellent teachers who compose its staff to observe, that for some time to come, and until a higher class of students, trained with more care and success during their apprenticeship as pupil-teachers, shall form the body of its residents, the results of the annual examinations will not represent adequately either the skill or the diligence of the professors. Up to the present moment, indeed, those results, in spite of the novelty of the institution and the defective preparation of some of the students, have been perfectly satisfactory,

rather above the average, and far beyond what might have been reasonably anticipated. But though they afford much more ground for congratulation than for discouragement, they are not accepted by the authorities as equivalent fruits of the intelligent labour by which they were produced, nor as sufficiently approximating to that high standard of excellence which they hope and purpose to attain.

Its remedy.

May we believe, then, that there is any remedy for this waste of power, resulting inevitably from the incapacity, or defect of mental culture, of a certain proportion of students in the training schools? The remedy appears to me to be obvious, or my allusion to the subject would be superfluous and unpractical. But it cannot be applied without the earnest co-operation of school managers.

If pupil teachers continue to be apprenticed to feeble and incompetent, or to careless and negligent, masters; if the training and instruction which they receive is loose and superficial; if they arrive at the termination of their apprenticeship with no more discipline of the intellectual powers, or of the moral habits, than they possessed at its commencement; the authorities of the normal colleges will still have to deal with rude and coarse materials, and waste in comparatively fruitless toil the eminent qualifications, zeal, charity, and skill, which they bring to the discharge of their difficult duties. In the name of these valuable and laborious public servants one may surely venture, without presumption, to appeal to the whole body of school managers, and to solicit that energetic and thoughtful co-operation which their personal interest in the success of our training schools may reasonably inspire, and without which the special work attempted in them must lose a portion of its value, and continue to be maimed and imperfect. If our training colleges are frequented by two distinct classes of students, of whom the one is vastly more competent than the other to profit by the advantages which they offer to all who seek them, this is simply because the teachers under whom they had worked out their apprenticeship belonged also to two distinct classes, and their merits or defects are exactly reflected in their pupils. I repeat that the remedy for this unnecessary evil lies exclusively with school managers, who have already done so much to promote the success of the general work, and who, it may be fairly assumed, have both the power and the inclination to secure its timely and effectual application.

Staff of training college.

The staff of the training college, of which I have now to offer a more particular account, is still composed of the same officers as in former years. I have lately had an opportunity of attending at the various lectures, and examining the progress of

the students in the different subjects of instruction. Unfortunately the engagements of my colleague, Mr. Stokes, did not permit him to give me his valuable assistance, but we hope on future occasions to be able to make arrangements for the joint inspection of all the training schools.

Course of study.

The course of study is substantially unchanged. The first remark which it occurs to me to make with respect to it, refers to the fact of six of the students having elected, in the middle of the year, to study Latin instead of algebra.

Latin students.

Although I ascertained, by actual examination, that they had made fair progress in the elements of this language, and cannot doubt that it is a study which has contributed to their intellectual discipline, and will do so more effectually in its future stages; yet it seems to me a grave question for the principals of training schools, whether the study of Latin, necessarily superficial and incomplete, should be accepted as an exclusive substitute for that of mathematics. If it could be pursued thoroughly and effectively, so as to secure, in any sufficient measure, a knowledge of the analytical structure of so important a language, and to constitute a really vigorous training of the mind, the suppression of all mathematical reading might perhaps be regarded as a tolerable evil. But it can hardly be contended that a moderate acquaintance with the principal Latin inflections, and the power to translate, more or less accurately, a few meagre sentences, is an intellectual gain at all equivalent to the complete knowledge of algebra or geometry. The teachers in the training school appear to concur with the opinion which I took the liberty of expressing to them with reference to this point. The subject of physical science forms part of the course of reading of the second-year students; and I was not surprised to hear from Mr. Capel, to whom that interesting branch of teaching is committed, and who is very competent to do justice to it, that the Latin students find a serious difficulty in prosecuting it with advantage owing to their ignorance of mechanics and conic sections. But the attention of the principal is directed to this important question, which may be safely left to his prudence and judgment.

I ought, however, to observe, that two second-year students, who had studied Latin during the whole period of their residence, have made very creditable progress, and translated with considerable fluency and intelligence passages from Cicero and Virgil.

Physical science.

Having referred to the study of physical science in this institution, I may remark, that I had the pleasure to hear a lecture by Mr. Capel on *Heat and its chemical relations*, in which his capacity as a lecturer was fully displayed. The generation of

heat by chemical affinity was illustrated by actual experiments; and though the apparatus, which appears to be gradually increasing, cannot be regarded as complete, yet it is valuable as the nucleus of a larger and better collection, and is used with good effect. A grant towards supplying what is still defective would be well bestowed in this case.

Geography. Geography, especially in the second-year course, seems to be taught with much vigour and considerable power of illustration. The facts which belong to this branch of instruction appear to be treated, as far as possible, in their relation to principles. In a lecture which I heard great pains were taken to indicate the leading characteristics, and to account for the various history of peoples, in connection with the peculiar physical condition of the countries inhabited by them. Examples were required, and readily furnished by the students, of the greater comparative results obtained from rude soils by energetic races, than from rich and fertile ones under a languid and unskilful system of culture. The first-year students also displayed, in their examination upon this subject, increased power in forming and expressing general views, and in proceeding clearly and methodically from one conclusion to another. I must add that in this, as in all the subjects entrusted to him, Mr. Capel is extremely careful not only to impart accurate and solid knowledge, but to indicate the methods by which it may be most advantageously conveyed to the minds of children. He not only communicates his own information, but shows, always with clearness, and often with much felicity of manner and expression, by what steps and with what precautions it may be presented to feebler apprehensions. His illustrations too, which are apt and copious, are almost always of a religious character, and such as tend to exalt, naturally and judiciously, the wisdom and power of God. The books of reference which are chiefly employed in teaching the large and important subject of geography are, Humboldt's *Cosmos*, Guyot, Murray's Encyclopædia, M'Culloch's Commercial Dictionary, Lyell's Principles of Geology, Herschell's and Hymers' Astronomy, &c.

Grammar. Grammar and English literature receive in this institution the special attention which they may justly claim in the system of education which it is designed to promote. The teachers appear to consider, and perhaps I may venture to say that all my own observations lead me to the same opinion, that the main object to be aimed at in teaching grammar in an elementary school, beyond that of using it as an instrument for cultivating the understanding, is to create in children the power of rapidly and accurately analysing the logical construction of propositions, to acquire familiarity with their various grammatical forms, and thus to apprehend readily the meaning of

language, whether written or spoken. It is this faculty, and this alone, which can qualify them to understand what they hear or read, which prevents attendance at sermons and catechetical instructions from degenerating into a wearisome and profitless task, and converts what is otherwise only a crowd of unintelligible words into living and salutary truths. The principal text books used are, Bromby's Grammar, Latham's English Language, and Morell's Analysis, a work which I am in the habit of recommending in all schools; and the whole system of teaching is wisely founded upon the admirable method developed in the great French work, the *Analyse Logique*, the habitual use of which in French schools of all degrees is, I conceive, the true explanation of that remarkable knowledge of their own language, which not only the higher but so many of the labouring classes in France display, and which English residents in that country can hardly fail to notice. The popular vocabulary in our own villages, and even in our towns, is limited to a few score words, which are used over and over again with persevering stolidity, and commonly as the vehicle of thoughts which are quite worthy of the rude form in which they are clothed. In France, however, and especially in certain districts, as the *Touraine*, one hears the most elegant phrases in the mouths of servants and artisans, and even sometimes of peasants, of which the peculiar construction sufficiently attests that language is regarded in their schools as the most important of all studies. I have myself often heard expressions from persons of the class alluded to which were almost elaborate in their structure, but which were chiefly remarkable as indicating the familiar perception of ideas of an abstract order.* Nothing is more full of promise for the future of popular education in our own country than the care and skill which are now so commonly displayed in teaching grammar. I cannot doubt that the race of teachers who are being, or will hereafter be, formed in this training school, will be found capable of handling this subject with power and judgment, and so as to secure the important practical results which ought to accompany the rational study of it.

History. The next subject which seems to require special notice is history. As far as I possessed opportunities of judging, there has been no lack of careful and minute instruction in this branch of study, in which the students have hitherto displayed creditable proficiency. But I was not able to satisfy myself, perhaps from want of time, that there was either such a classi-

* On the second day of the revolution of February 1848, I overheard two labourers, in a town in the south of France, discussing the character of M. de Lamartine, upon whom all eyes were at that moment fixed. "J'avoue," said one of them, "que je n'aime pas trop cet homme-là : *il n'a pas d'idées fixes.*"

fication and distribution of its distinctive epochs, or such a methodical connection of causes and results, as should be aimed at in teaching it. I have no doubt that the students are acquiring a solid knowledge both of general and constitutional history; but the means adopted to form in them the power of communicating this knowledge to others were less apparent. I must repeat, however, that my opportunities of forming an opinion on that point were insufficient, and that I have reason to distrust my impression with respect to it.

The text books used are, besides elementary histories, Warren's Extracts, and Creasy on the Constitution. The books of reference are, Lingard, Pictorial History of England, Bowyer's Constitutional Law, Stephen's Commentaries on the Laws of England, Hallam, &c.

Mathematics.

The number of students who have hitherto applied themselves to the exclusive study of mathematics is so small that it is not necessary, at present, to enter into details on this subject. It will suffice to say, that two of the teachers of this branch are highly qualified, and display a full acquaintance with the best and most elegant methods.

Music and Drawing.

Music and drawing have been taught with great success, especially the latter, in which almost every student at the last examination gained a prize. I need not refer to the well-known qualifications of the professor, who, as I am informed, has expressed great satisfaction with the progress of his class in this college.

Discipline and general management.

In speaking of the general tone and character of the institution, and the results which it promises to attain eventually, I should not do justice to my own convictions, nor satisfy the reasonable expectations of its promoters and friends, if I were not again to refer to the inappreciable benefits which accrue to it from the singularly wise and prudent direction of the principal. Perhaps there are no better nor more qualified witnesses on this point than the students themselves, some of whom have used language, in speaking of it, which it was extremely gratifying to hear, and which was equally honorable to their superior and to themselves. The discreet severity of the discipline, infractions of which are very properly punished by prompt dismissal, approves itself to the judgment and conscience of the students; while it also assists them to obtain that habitual self-control, and to acquire that solidity of religious feeling and practice, without which their future labours can have no real value. But the salutary effects of this needful moral discipline would be more complete if it were commenced at an earlier period. Teachers and school managers have a duty to perform to these young persons *before* they enter the training school, the omission or neglect of which, in particular cases, creates no small difficulty and embarrassment to the officers

of the college, and introduces elements of confusion and disorder. In a very few cases the want of this previous discipline has been plainly apparent, and the responsibility of such cases does not lie with the principal or his assistants. On the other hand, a large proportion of the students have uniformly exhibited not only habits of studious and intelligent application, but the higher virtues of docility, cheerful obedience, and reflecting piety. The principal has ample reason for the confidence which he feels in the success of the work entrusted to him; and the promoters of the institution can desire no better guarantee on this point than that which they have already secured by committing it to his hands.

Second year students.

Only two second-year students have quitted the college this Christmas. Both of them have found a field of labour out of my own district; but it is a great satisfaction to me to believe that in the discharge of their new duties they will do credit to themselves and to the institution to which they owe so much. It is a sufficient proof both of the confidence which it excites, and of the high character and qualifications of these young men, that salaries equivalent to 100*l.* per annum have been promised to both.

First-year students.

Of the first-year students who have just entered upon the charge of schools, having left the training school with the approval of all who were authorized to advise them, I also entertain the most favourable anticipations. I shall be much disappointed if they do not display, in addition to the ordinary qualities of active and intelligent teachers, that special gift of religious patience and ardent charity which it is the main object of this institution to form in all its inmates, and upon which their power to exert a beneficial influence over children more importantly depends than upon the measure of their ability or the scope of their attainments.

Conclusion.

I have only to add, in conclusion, that every condition of success appears to be now permanently secured. Buildings of the highest class, suitably arranged and furnished; teachers possessing intellectual power, technical knowledge, and prudent zeal; the clear and full comprehension on the part of the principal of what should be aimed at in such an institution, definite perceptions of the means by which it is to be attained, and the power of using them with that strength and confidence which spring from fixed and profound convictions; all these will conspire to give to the work, year by year, completeness and solidity, and to secure for it the amplest success to which such an institution can attain.

I have the honor to be, &c.

T. W. M. Marshall.

To the Right Honorable
The Lords of the Committee of Council on Education.

REPORT *by Her Majesty's Inspector of Schools*, T. W. M. MARSHALL, Esq., *on the* ROMAN CATHOLIC TRAINING COLLEGE *of All Souls', at St. Leonard's-on-Sea, for* SCHOOLMISTRESSES;—*for the Year* 1856.

MY LORDS,

CONSIDERING the circumstances under which this institution was established, and the short period which has elapsed since its foundation, it does not seem necessary to offer on this occasion more than a very brief and general statement of its actual condition and prospects, reserving for another year a more minute account of the system of instruction and methods of teaching adopted in it. Origin of Institution.

A training school for female students was opened at Nottingham towards the close of 1855, in which provisional accommodation was offered to about twenty inmates. The design which the promoters had formed of erecting permanent buildings on a large and costly scale was subsequently abandoned, for reasons which have been communicated to the Committee of Council; and on the 7th of February 1856 the institution was transferred, upon the application of the *Roman Catholic Poor School Committee*, and with your Lordships' consent, from Nottingham to St. Leonard's-on-Sea. Transferred from Nottingham.

At that date adequate accommodation existed at the latter place for about twenty-five students. New buildings, designed by W. Wardell, Esq., have subsequently been erected, and are at this moment occupied by the resident students. The connexion of the new with the original premises has been skilfully contrived, and there are now five large and lofty rooms *en suite*, on the ground floor; viz., practising school, library, lecture room, music and drawing room, and refectory. All these are excellent rooms, of ample dimensions, well lighted and ventilated, and perfectly adapted to their several objects. On the first and second floors are five spacious dormitories, affording separate sleeping accommodation for fully sixty students, furnished and arranged on the best plan. There is also an infirmary capable of receiving six beds. Buildings.

It is perhaps impossible that a training school should enjoy greater advantages of site and position, or possess in a larger measure the requisite conditions for promoting the health and comfort of the students. Built upon a hill which inclines to the sea shore, commanding a wide prospect, close to a large town yet separated from it by its position, having an enclosed playground of three acres within walls, and an unbounded Advantages of site.

expanse of downs in the rear, it is not surprising that the students should exhibit signs of robust health. Some of their number, whom I knew originally as the sickly inhabitants of manufacturing cities, are completely changed in their physical aspect. I cannot doubt that these favourable circumstances will so exert no inconsiderable influence upon the success of their training, and enable them to prosecute with increased energy, a laborious course of study, free from the depression and discouragement which are the inevitable attendants of lassitude and fatigue. It was this conviction which induced me to disregard objections originally urged to the geographical position of St. Leonard's; and although a certain number of pupil-teachers from the northern part of my district have naturally preferred to seek admission into the Liverpool training school, on account of its contiguity to their homes, and in a few cases I have myself recommended them to do so, yet I cannot but rejoice in the selection of St. Leonard's as the site of a training school for the southern district. Of the privileges which the students enjoy in respect of discipline and instruction, I shall have to speak presently; but there are advantages of a lower order, yet most worthy to be taken into account in reporting upon an institution of this kind, which also claim recognition as a distinctive feature, and of which the importance will be readily admitted.

Resources. The funds necessary for the establishment of the training school, the erection of the buildings, the supply of furniture and apparatus, and the maintenance of the students, have been entirely derived from the noble generosity of an educational community of which the principal and all the teachers are members; viz. the *Society of the Holy Child Jesus*. Assisted only by the annual grants administered by your Lordships, and preferring no claim for aid upon others to whom they might have addressed an irresistible appeal, these ladies have cheerfully contributed not only their property, but the far more precious donation of their personal labour, to this great work. For some years past they have devoted themselves to the charge of elementary schools in this country, displaying an elevation of character, a patience of charity, an abnegation of self, and a vigour of intellect, which I may respectfully notice, but cannot presume to praise. Convinced that the measures devised by your Lordships for the promotion of public education were deeply marked with the characters of justice, prudence, and wisdom; and resolved, after due deliberation, earnestly to co-operate with them; they presented themselves, without any previous preparation, for which their incessant toils left them no leisure, for examination, and in every case with complete,

in some with distinguished success. The urgent necessity of training a higher class of secular teachers soon became apparent to them, and they determined to embrace this new work, cheerfully accepting its responsibilities, and taking upon themselves, with superfluous liberality, its pecuniary cost.

Staff.

The staff of the training college is composed as follows :—

Principal - - -	Mrs. Cornelia Connelly.
Head Teacher - -	Miss Maria Elizabeth Buckle, first-class certificate of merit.
Assistant do. - -	Miss Sarah Agnes Orr, first-class certificate of merit.
Drawing Mistress - -	Miss Helen Frances Cusack, first-class certificate of merit.
Second Assistant Teacher -	Miss Eliza Mary Noble, second-class certificate of merit.
Mistress of Method - -	Miss Catherine Angela Hunt, second-class certificate of merit.
Teacher of Music and Needlework.	Miss Helen Green.
Chaplain - - -	Rev. John Butt, late military chaplain in the Crimea.

Students.

The number of students at present in residence is *twenty-two*, of whom *twenty-one* are Queen's scholars. Of these *twelve* have just entered the second year course, and *ten* are commencing the first. The former were examined at Christmas for the certificate of merit, which they all succeeded in obtaining. It is very satisfactory to me to record, and will, no doubt, be very encouraging to the excellent teachers, that the first examination has been accomplished without a single failure. The class lists are not yet in my hands, but I observe with pleasure that of the *twelve* papers worked by the first year students in arithmetic, *eight* are marked either "good" or "excellent," and of the papers on the important subject of school management, *ten* receive the same honorable distinction. In industrial skill, which is sometimes erroneously supposed to be neglected in our best elementary schools, *six* of the first year students are marked "good," and *three* "excellent." The only subject in which I am disappointed is the drawing, which, however, has been taught with great skill and care. It is true that *ten* of the twelve students are marked "fair;" but the authorities of the training school complain, with reason, that they were completely misled by the Minute forwarded to them, in which *perspective* is omitted from the subjects required from first year students, and was, therefore, postponed to the second year's course. In history, *eight* of the students are marked either "good" or "excellent," and *four*, "fair." On the whole, the results of the first year's examination are most creditable to the students, and full of promise for the future.

Course of Study.

The course of study for the first year students appears to me, as far as I have had opportunities of judging, to be prudently and skilfully arranged; but it certainly makes a large demand upon their powers of application. More than eight hours of daily study, and two of prayer, meditation, and other spiritual exercises, implies energetic discipline both of the conscience and the intellect. It is true that in this distribution of the day's work is included not only the study of French, but also of music and drawing, which may be fairly regarded as recreative subjects. Nor does this amount of labour appear to be irksome or oppressive to the students. They acknowledge that it keeps them fully employed, but they do not seem to wish for relief. Indeed, their cheerful zeal and docility sufficiently attest their keen appreciation of the advantages which they enjoy. I must add that their vigourous health refutes the notion that more relaxation is required.

Latin.

I do not propose on this occasion to speak particularly of the various subjects taught, nor of the methods employed in each. But it is worthy of observation that in this, a female training school, the course includes Latin, French, algebra, and geometry. With respect to the first of these subjects, there is a special and urgent motive for teaching it in any Roman Catholic institution, apart from its immense value as an agent in developing the mental powers, and in facilitating the intelligent study of the English language. Of course the annual examinations will not afford any opportunity of testing the proficiency of the students in this subject, except in their working of the paper on grammar. But such a study has a value wholly independent of the technical results which it is the province of official inspection to detect and classify.

Algebra and geometry.

With respect to algebra and geometry, and especially the latter, I cannot but heartily sympathise with the opinion entertained by the teachers of this training school, that they are legitimately included in the programme of studies proposed to female students. It may savour of temerity to venture upon such a suggestion, in the face of "public opinion" somewhat unreasonably irritated upon topics of this kind; but fortunately the incoherent sentiments which are dignified by that generic title find no entrance within the walls of this institution. What valuable acquisitions algebra and geometry are to female teachers, I have had ample opportunities of judging during the last two or three years. I have noticed, in another report, that already many of the female pupil-teachers surpass the males even in arithmetic; and I can, in every case, trace the reason of this superiority to the

knowledge of the elements of mathematics possessed by the teachers of the former, and the good sense with which they apply it. Almost all the students at the training school to which I am referring can work equations with accuracy; and their knowledge of practical geometry was satisfactorily shown in the drawing papers which required for their execution familiarity with geometrical construction.

Other subjects.

I shall reserve to a future occasion a more minute report upon the several subjects of instruction. It will suffice to say here that all appear to me to be taught, as far as I am capable of judging, with the greatest accuracy and precision, unfailing vigour and animation, and a patience which no fatigue can weary and no effort exhaust. Arithmetic and history are, perhaps, conspicuous amongst the other branches of study for the solidity and energy of method with which they are imparted, and I anticipate that grammar will be taught with equal skill and success. I shall not express an opinion upon the talents and acquirements of the teachers, whose humility does not forbid them to aim at success, but only disclaims the praise which accompanies it. I may observe, however, that the students, some of whom are acute enough to form an excellent judgment in this matter, never cease to congratulate themselves and one another upon the rare privileges which they possess, and of which they are perfectly conscious. One of the most thoughtful of their number, an ardent student, and at one time too impatient of any but the highest order of instruction, replied to my private inquiry on this point in these emphatic words—"For the first time in my life I have greater advantages than I know how to use."

Principles of teaching.

In this, as in every other training school, the final aim, to which the whole system of discipline and instruction ought to tend, is to communicate to the students a thorough and definite comprehension of their future mission as teachers, and of the true principles which ought to guide them both in the acquisition of knowledge and in the difficult art of conveying it to others. It is not expedient to do more than indicate by the faintest outlines the system adopted with that end. The principal was good enough to state to me, with great minuteness of detail, and with that clearness and lucidity which belongs only to those who thoroughly possess their own knowledge, and can apply it to a definite purpose without confusion or uncertainty, what she considered to be the genuine work of a training school, and the means by which it was to be effectually accomplished. The usual popular text-books on the principles of training are estimated at their true value, and the honorable names of Stowe, Dunn, Dawes, and others

of their class, receive the respect to which they are entitled. But their works, which must be admitted to possess a certain technical and relative value, do not even profess to touch upon that admirable philosophy on which the student-teacher ought to medidate habitually, and which traces the motives of our acts, and defines the mode of their performance. From this philosophy, of which the principal text-books used in this training school are the *Catéchisme de Persévérance* of the Abbé Gaume; *La Théologie Affective,* ou St. Thomas en Meditation (ed. Chevereau, 1855); and the *Meditations* of Da Ponte; all the true principles of teaching are derived. And the first principle which it affirms is this, that no teaching, however profound and accurate, however brilliant and varied, can avail to any practical purpose, without supernatural charity for its motive, and habitual supernatural aids for its direction.* According to this philosophy, the existence and attributes of God, considered as motives of human action, precede and underlie all other knowledge, of which He is not only the end but also the intellectual basis. It affirms that there must be a *motive* in teaching which the reason indicates and the will accepts, and which the teacher must clearly see and steadily keep in view. This original motive, though perfectly simple and uniform by its nature, may be said to become complex in certain phases and conditions of society. Education may vary in its accessories and accidental developments, as human society varies; and the motive which impels us to educate the ignorant, though always substantially the same, may be complicated, so to speak, by the special circumstances of a particular country or epoch. It is recorded in the biography of the illustrious M. Olier, of St. Sulpice, who lived at a moment when the very foundations of civil society seemed to be broken up, and who was intrusted with the charge of a district which was commonly denominated "*l'égout de Paris,*" that he relied upon one instrument, and one only, as capable of accomplishing the tremendous task imposed upon him. "Il comprit qu'il lui restait un moyen de renouveler cette terre d'iniquités: *l'éducation de l'enfance attira toute sa solicitude.*" The evils with which he had to struggle exist elsewhere, for no country is wholly exempt from them, and ask everywhere for the same remedy. That remedy is being applied at this moment in our own country by various educational bodies, with a success proportioned exactly to the means at their disposal, but with a zeal and earnestness which is common to

* Such a principle need not surprise *Christian* teachers, when even Plato included φαντάσματα θεῖα amongst the sources of all human wisdom and philosophy.

all. Their work is aided by the Government, as far as it has the power to do so; and it has no higher title to the respect and gratitude of society than that which its prudent and careful co-operation in such a work may justly claim. But it cannot go beyond its province. It may provide homes for the future teachers of our children, and defray the cost of their maintenance, but this is all which it can do. They must be taught, trained, and disciplined by others. Upon the character of our normal colleges depends, therefore, the whole future of elementary education in this kingdom. If they possess, and know how to impart, true principles of teaching, all will be well. And the first of these principles is, that charity is the true motive, and humility the only strength, of those who undertake the instruction of others. Complete abnegation of self, a condition easier to conceive than to attain, is therefore wisely proposed to students as the end to which their training should tend. They are taught by what steps it may be reached; and however lofty such aims may be, they are not wholly unattained, because the aids which they enjoy are fully proportioned to the difficulty of the task. They have also continually before them,—and this remark applies to both the training schools which I visit,—living examples which they may strive to imitate according to the measure of their gifts. Such examples are persuasive and fascinating, and in their presence selfishness is abashed, and indolence effectually rebuked. It is impossible for natures which have any generosity wholly to resist their influence. Pascal said, with reference to the credibility of the first Christian teachers: "Comment ne pas croire à des témoins qui se laissent égorger?" And the students in our training schools, who have always before their eyes models of patience, wisdom, and charity, may easily believe that these virtues are within their own reach, and venture without temerity or self-confidence to attempt to emulate them.

First-year students remain.

It is a satisfactory token of the earnest appreciation of their privileges which the students now in residence exhibit, that not one of them, though tempted by offers almost irresistible to young persons, has consented to leave the institution at the expiration of the first year's training. They seem to comprehend that advantages so great are not to be hastily abandoned; and it is due to them to say, that whilst they vary in intellectual capacity and in technical skill, all appear to have profited in nearly equal measure by the discipline of temper and habits to which they have been subjected. I am unwilling to use language which may seem to deserve the reproach of exaggeration, but I have a strong impression that in this

respect it is impossible to attain more complete and satisfactory results. All the present students have been known to me since the commencement of their apprenticeship in 1850; and though their progress during the first five years was all that could be fairly expected, the single year of their residence in the training school has effected changes to which I cannot be insensible. Many of them during that period have assumed quite a different character, of which habitual self-control, cheerful humility, patient application, and intelligent, reflecting piety are the principal marks. The capacity of the institution to form valuable and capable teachers has been fully proved, and will, I have no doubt, become more and more evident. There will hereafter be no lack of sensible and devoted labourers in the field of education, content to find their toil in this world and their reward in another. Such teachers we shall owe to the training school to which these observations refer, and to others like it. On another occasion I shall probably have an opportunity of describing it more in detail; but enough perhaps has been said to show that it is a suitable place for the special work to which it is devoted, though not enough to do justice to my own impressions of the manner in which that work is being performed.

I have the honor to be, &c.

T. W. M. Marshall.

To the Right Honorable
The Lords of the Committee of Council on Education.

REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools*, S. N. STOKES, Esq., *on the* ROMAN CATHOLIC TRAINING COLLEGE *for* SCHOOLMISTRESSES *at Liverpool.*

MY LORDS, January 1857.

THE apprehensions regarding want of accommodation for students in Roman Catholic Training Colleges, which the discharge of my duty required me to express in my General Reports for 1853 and 1854, have been happily dispelled by subsequent events. The Male Training College of St. Mary, Hammersmith, which at that time could receive no more than thirty-nine students, has now been enlarged in an excellent manner, so as to contain more than eighty; and I anticipate that it will amply suffice, for a considerable period, to supply the north, as well as the south, of the island with trained masters. On the last three years, the average number of male apprentices admitted to service in schools within my district is thirty-two; and there need be no fear that such of them as give proof of their desire to become teachers, by diligent application and exemplary conduct during apprenticeship, will be excluded from St. Mary's by want of room. No less reason is there to believe that the students admitted will there enjoy great advantages in scientific instructions while their minds are subjected to the highest influence, which can be exerted in the formation of character. The visit which I made last spring to the Hammersmith Training College justifies this assertion regarding the wisdom of its management and the promise of its success; and the impression then created has been confirmed by more recent information derived from the Principal, the Rev. J. M. Glenie, who did me the favour, in the autumn of last year, to accompany me in my official tours through parts of Scotland and Lancashire. But, if in 1854 the prospect of male pupil-teachers was not bright, that of female apprentices appeared gloomy indeed. At the close of that year, when 325 girls were industriously serving their apprenticeship in Roman Catholic schools, no recognized training college had been provided for the completion of their professional education. The Roman Catholic Poor School Committee, occupied in the maintenance and enlargement of St. Mary's, Hammersmith, felt itself at the moment unequal to the task of originating a female training college; while among the public, intimidated by the outlay of time, energy, and funds required to establish and support such institutions, no individuals appeared willing to undertake so

Preliminary observations.

grave a responsibility. From a position of great difficulty and inconvenience, the Roman Catholics of Great Britain have been freed by the interposition of voluntary associations of religious ladies, dedicated to the education of the poor, by whose instrumentality two female training colleges were founded towards the close of 1855. It is upon one of these that I am now to report to your Lordships.

Origin of College at Liverpool.

The prospect of benefiting many thousands of poor girls and infants, by furnishing a supply of virtuous and efficient schoolmistresses, induced a community of religious ladies, already established in Liverpool, to offer to the Roman Catholic Poor School Committee, for the purposes of a normal college, the use, rent-free, of a large house and garden belonging to them, together with a sufficient staff of teachers; the community stipulating only that they should not be asked to surrender the property, nor be called upon to meet the annual expenses of the new institution. As the community in question was known to number among its members, not only English ladies of great accomplishments, but also, foreigners not less accomplished, and, moreover, experimentally acquainted with the approved methods of the best primary schools in Belgium, Holland, and Prussia; and, as those connected with it had given ample proof of their ability by conducting with eminent success ten of the largest schools for girls and infants in Liverpool (besides many more of high character in various parts of England, the continent of Europe, and the United States of America), and had even obtained in Belgium considerable experience in the management of normal schools; and as it was further understood that whatever additional accommodation the development of the institution might render necessary would be provided without appeal to the public purse, the Poor School Committee was not slow to accept an offer presenting so many extraordinary and unhoped for advantages. It was accordingly determined by that Committee to appropriate annually out of their funds a sum of 150*l.* for the governesses of the new training school, together with a capitation grant of 2*l.* for every student in residence; and it was intimated that further aid might be expected if this amount, in addition to students' fees and your Lordships' grants, should prove inadequate to cover the yearly outlay. The scheme, when carried to this point, was submitted to the Committee of Council; and after examination of the plans of the house (then numbered 74, but now 96, Mount Pleasant), and of a special report which I was instructed to make upon it, your Lordships were pleased to authorize the admission of twenty-one normal students.

As the favourable result of the application to the Committee of Council could not be announced until the time of the Christ-

mas examination had all but arrived, some fears were not unreasonably entertained that the number of candidates for scholarships would, on the first trial, be small, and that those who had the courage to offer themselves would prove but moderately qualified for an ordeal which they had no reason to anticipate. Such fears were groundless. For the twenty-one vacant scholarships twenty-one candidates offered themselves, and twenty passed the examination with success; a result which, I think, may be accepted as proving both that the standard of examination is pitched with prudence, and that the candidates had generally received, during their apprenticeship, the full amount of instruction contemplated in your Lordships' Minutes. One of the successful candidates was prevented by domestic considerations from availing herself of the scholarship; but two young women of promise from London and Wolverhampton speedily applied for the vacant places, as paying students, and on the 19th of January 1856, the Liverpool Training School opened with its full complement. I proceed to offer some remarks upon—(1.) The students and the terms of admission; (2.) The discipline to which they are subjected; and (3.) The premises provided for their accommodation.

1. The two students, never apprenticed and so ineligible to scholarships, had been engaged in school work. Of the nineteen Queen's scholars, fifteen had been apprenticed in schools within my district, two in Mr. Marshall's district, and two in schools connected with the British School Society; twelve of them passed directly from the schools of their service into the training school, while seven had, after apprenticeship, spent a period longer or shorter as principal or assistant teachers; eight gained scholarships of the first class, and eleven of the second, as the subjoined list will show in detail :—

QUEEN'S SCHOLARS ADMITTED TO THE LIVERPOOL TRAINING COLLEGE IN JANUARY 1855.

First Class.

Name of Scholar.	Name of School.
Mary Byrne - -	Liverpool, St. Oswald's.
Mary McDermott -	Manchester, Lower Mosley Street, B.S.
Ellen Hayhurst -	„ St. Patrick's.
Mary Tivnan - -	„ „
Elizabeth Roddis -	Birmingham, St. Chad's.
Anne Atherton - -	Liverpool, St. Thomas'.
Anne Keating - -	„ St. Anthony's.
Jane Nickson - -	Hurst Green.

Second Class.

Name of Scholar.	Name of School.
Margaret Carter	Liverpool, St. Thomas' and St. William's.
Elizabeth Smart	Manchester, St. Patrick's.
Catherine Warner	Liverpool, St. Thomas'.
Mary McCarthy	Bolton, St. Peter's and St. Paul's.
Anne Harrison	Newcastle, St. Andrew's.
Maria Anderson	Talacre.
Mary Woods	Ince Blundell.
Mary J. Dagleish	Stella.
Mary Ann Mahon	Liverpool, St. Nicholas'.
Cecilia Kirwen	Hull.
Elizabeth Mooney	Halliwell, Dean Mills, B.S.

Their age at the date of admission averaged nineteen years and three months. Previous acquaintance with the majority of them in their schools justifies me in asserting that, while their advantages as pupil-teachers had been extremely various, some serving throughout their whole time under one mistress of the highest attainments and equal zeal, and others being subject to many changes and uniform mediocrity, yet all of them entered the training school with an earnest desire to prove, by docility, application, and good conduct, their resolution to yield themselves to the good influence of the house to be formed in character and attainments after the model of the perfect teacher of poor children. I believe that, on admission, they belonged exactly to the class which your Lordships most desire to draw into normal training. Ill health obliged Mary Woods to withdraw in the early summer. The rest have completed the year satisfactorily, in the same spirit with which they commenced it. I may add, that nine of them leave after one year's training, to take charge of schools, nine remain for the second year's course, and two (temporarily, at least,) cease to teach.

Queen's scholars are admitted upon the terms prescribed in the Minute of 14 July 1855, and in consideration of their scholarships are provided with tuition, board, lodging, washing, and medical attendance without any further charge. Students in training, without scholarships, pay 6*l.* 10*s.* per quarter for the same advantages. They find their own books and writing materials, but have access to the college library. Instrumental music is an extra, charged at 15*s.* per quarter. They also furnish themselves with a simple uniform, to be worn on Sundays and special occasions, consisting of a black dress and white straw bonnet trimmed with dark blue.

2. The rules of the house are designed to maintain a spirit of regularity and discipline, without imposing any irksome restraint. Some of the governesses are always with the students, whether in hours of study or recreation. They are,

therefore, present at all the meals. The students are not permitted to leave the house unless accompanied by a governess. They have a large garden, in which they take exercise every day in fine weather, and once a week they walk into the country for the benefit of their health. When not in the open air, they pass their hours of recreation together; working with the needle, occasional reading aloud, music, and chess playing form a variety of amusement; and the time of relaxation is looked upon as an important moment for the developing and formation of their characters. On this account they are rarely allowed to read or write alone, but all are expected to assemble round the governess. Letter writing is permitted only once a week, and all letters, whether written or received, pass through the hands of the principal. Those whose parents reside in Liverpool are not allowed to go to see them, but may receive visits from them on the first Sunday of every month.

The general course of instruction will be seen in the annexed time-table and summary:—

The students have had the advantage of listening to a course of lectures on religious subjects from one of the clergy of St. Nicholas'; but no appointment of a regular chaplain has been made.

The industrial training has consisted theoretically in lessons on domestic economy, and practically in household work during one hour every morning. The work is performed under the superintendence of the matron, during which the students are employed in sweeping and cleaning their own rooms, polishing the floors, &c. It has not been found possible, up to the present time, to give much practical knowledge of the culinary department; but in the new building arrangements of the most convenient description have been made both in the kitchen and laundry, and the attention of the students will be directed towards every branch of industrial training which can have any bearing upon their future lives and avocations. The time allotted to needlework is exclusively employed in plain sewing and cutting out. They are also taught in the practising school how to plan and prepare the work of the children.

The following lists exhibit the text books used by the students, and the works of reference consulted by their teachers :—

Text Books used by Students.

Religious Books.

New Testament.
Scripture History.
Religious Catechisms.

English Grammar and Language.

Bromby's English Grammar.
Morell's Essentials of Grammar.
" Analysis of Sentences.
Manson's Guide to Etymology.
Scott's Lady of the Lake.

Arithmetic.

Tate's Principles of Arithmetic.
" Exercises in Arithmetic.

History.

Burke's Abridgment of Lingard.
Ince's Outlines of English History.

Geography.

Cornwell's School Geography.
Colonies of Great Britain, National Society's.
Reid's Element's of Physical Geography.
Dunn's Principles of Teaching.
Chambers' Introduction to Science.
Tegetmeire's Manual of Domestic Economy.

Books of Reference.

Douay Bible.
Williams' Harmony of Gospels.
Davidson's Structure of Prophecy.
Bellarmine's Catechism.
Abbé Gaume's Catechism of Perseverance.
History of Manners and Customs of Jews.
M'Leod's Palestine.

Dictionaries.

Imperial Lexicon.
Sullivan's Dictionary.
Reid's Dictionary.
Crabb's Synonymes.

English Language and Grammar.

Latham's Grammar.
Hiley's Grammar.
Allen and Cornwell's Grammar.
Gilfillan's Milton, with Notes, 2 vols.
Cowper's Poems.
Scott's Poetical Works.
Chambers' History of English Literature.
Principles of Elocution.
Chambers' Etymology.
M'Culloch's Course of Reading.

Arithmetic.

De Morgan's Elements of Arithmetic.
Science of Arithmetic by Cornwell and Fitch.
Tate's Algebra.
M'Leod's Questions.
Chambers' Arithmetic.

Book-keeping.

White's Arithmetic, with Key.
Haddon's Book-keeping.
Treatise on Arithmetic, in Theory and Practice, Irish Board.

History.

Knight's Pictorial History of England, 4 vols. 4to.
Lingard's England, in 12 vols.
Flanagan's History.
Scott's History of Scotland, 2 vols.
Landmarks of English History.
Strickland's Lives of Queens, 6 vols.
Chambers' British Empire.

Abercromby's Moral Feelings.
„ Intellectual Powers.

Drawing.

Butler Williams' Model Drawing.

Music.

Wilhem's Method of Teaching Singing.

In addition to the above text-books and works of reference a library has been formed of interesting and at the same time instructive volumes for the perusal of the students when not engaged in deeper studies, and a taste for reading has been cultivated and encouraged amongst them. The lecture-room is provided with a cabinet of scientific apparatus (towards the purchase of which your Lordships made a grant), and a box of objects for illustrating lessons on common things.

Four means of practising the art of teaching and experimentally acquiring the skill so essential to future success have been afforded to the students. They have given occasional lessons in the well-ordered Practising School of 80 girls, which forms a part of the establishment. On Wednesday afternoons they have been in the habit of teaching and listening to lessons in the neighbouring school of St. Nicholas, which is very numerously attended, and of first-rate excellence, regarded either as a field for exercise or a model for imitation. In the evening, from 5.30 to 7, they have gone by turns to instruct a junior class of pupil-teachers. The lessons given on these occasions are prepared under the guidance and direction of one of the governesses. On Sundays, at their own option, and as a privilege, they are accustomed to attend several schools in the town, where they teach catechism, singing, &c., and accompany the children to church. Unless I am mistaken, these opportunities are inva- luable in giving a practical turn to the instructions of the training school. They will hereafter be estimated by the good effected in schools by the services of teachers who have been trained here.

The Christmas examination will test the solidity of the instruction. If I am not miserably deceived, the pious and simple spirit, the cheerful discipline, the able lectures, and the

most complete self-sacrifice, ensure in their combination a solid and lasting success.

3. It has been already stated that the original house in Mount Pleasant was considered roomy enough for 21 students only, and that this room was wholly occupied upon the first opening of the institution. As my visits of inspection already extend to about 150 school departments under female teachers; and, as the annual admissions of new female apprentices in my district average in the last three years upwards of 63, it was thought with good reason that a training college for 21 students, to remain in training for less than one year in no case, and in most cases for two years, was an insufficient provision for pupil-teachers now apprenticed, and would never prove adequate to supply trained mistresses for schools under inspection, and still less for those schools, even more numerous, which are prevented from coming under inspection only by the difficulty of obtaining certificated mistresses. The services of Messrs. J. and C. Hansom, Architects, of Clifton, were accordingly called into requisition, and a design was produced by them for a new building complete in itself, and calculated to accommodate 60 students. This design, conspicuous for thoughtful and convenient arrangements, was laid before your Lordships' Architect, and has now been carried out. It will be seen from the plans,* that the basement comprises a complete set of domestic offices; the ground floor has all the rooms required for the meals, needlework, and recreation of the inmates, as well as for the reception of strangers; the first floor contains a spacious study and lecture-room, two class-rooms, two mistresses' rooms, bath-room, infirmary,† and nurse's room; and the second floor is devoted to the dormitories. Above the dormitories a large apartment, not shown on the plans, is provided for the students' wardrobe. The exterior of the training college, ranging with the house fronts of a modern street, afforded small opportunity for a display of architectural beauty; but I see no way in which the interior could have been rendered more convenient or more suitable for its purpose. The building has been erected and furnished at the sole charge of the community who conduct the institution. I suppose that their expenditure for the public good upon this establishment cannot, when the value of the site is included, be reckoned at less than 10,000*l*. The obligation which they have conferred upon the country by founding it cannot be estimated in money.

I have the honor to be, &c.

SCOTT NASMYTH STOKES.

To the Right Honorable
The Lords of the Committee of Council on Education.

---

REPORT *on the* GLASGOW ESTABLISHED CHURCH NORMAL COLLEGE, *by Her Majesty's Inspector of Schools*, JOHN GORDON, Esq. ;—*for the Year* 1856.

MY LORDS, Edinburgh, September 1856.

THIRTY years ago one of the schools in Edinburgh began to be attended by teachers desiring to make themselves acquainted with the most approved methods of tuition. It was the Sessional School of the Tron parish, then noted as the model of an elementary school. The teachers who came to it with that view seldom, at one time, exceeded half a dozen in number, and their stay was seldom over two or three months. They were placed and maintained there by the Education Committee of the Church of Scotland; and they were teachers elect of schools established and kept up by that Committee in the Highlands. This was the germ of the Normal school system in Scotland; it was the only manner in which the preparation of schoolmasters specially for their calling was pursued in Scotland from 1826 to 1834.

Origin. In 1834 a society, called the Glasgow Educational Association, founded in Glasgow the Normal College in Dundas Vale now belonging to the Church of Scotland. Their object was to educate young persons of both sexes for the teacher's office upon a plan which, in two respects, was new and peculiar. The education was not to be confined, as heretofore, to instruction in mere method, but to extend the students' knowledge in the various branches usually taught in elementary schools; and the teachers thus prepared were not intended exclusively for any certain class of schools, like the General Assembly's in the Highlands, but were offered indiscriminately for all in any part of this country or abroad. This College was the first regular seminary of the Normal kind established in Scotland. I employed a few days in its inspection at the close of the Session 1855–6,—the time at which its whole procedure may be supposed to have been most fully exhibited.

Attendance. The attendance of pupils at the practising school then amounted to about 600, and of students in training to 83,—the latter distributed as follows :—

Queen's Scholars.		Bursars on Fund of Assembly Committee.		Self-supporting Students.		Students of First Year.		Students of Second Year.	
M.	F.	M.	F.	M.	F.	M.	F.	M.	F.
11	3	19	—	4	45	26	36	7	3

The class of male students for the second year appeared, for the first time in this seminary, during the Session 1855–6; and in regard to them I remark,—that the General Assembly's Committee in 1847 proposed to extend the minimum term of attendance at the Normal college to one year and a half for all bursars upon their fund; (*Minutes of Committee of Council on Education*, vol. 2, for 1846, page 508,) but that it was soon found the time could not be prolonged beyond a single year, for two reasons—the unwillingness of young men to employ a longer time in preparatory studies for the teacher's calling, while employments of another kind were open to them on all hands; and the ease with which employment as teachers could be found, though they should not have profited by the Normal college more than a single session. The second year's attendance has now been promoted by your Lordships' Supplementary Minute of August 1853, modified by that of 28 June 1854, and followed up by the adopted Programme of studies sketched in Canon Moseley's letter of 2 May 1854. To the Managers this extension of the period of study was the more satisfactory, as it had been so much anticipated by themselves in 1847, and more recently in their Minute of 27 December 1852, wherein they pointed out the impossibility, not to say of mastering, but, of adequately dealing in one year with the various scheme of study then pursued in the Normal college. At the same time, the second year's attendance was not enjoined by your Lordships' Minutes, but rather encouraged by the rule which limited the certificate of the first year's student to the lowest class; and the expediency of that order seems proved by the small number of students that have yet attended for the second year, however much that fact may be regretted. The extension of the term to two years is now, however, on the point of being effected more surely, by the great increase in the number of Queen's scholars.

Subjects of instruction.

The subjects taught during the last year were those included in the Programme. All of them had been taught here prior to the appearance of the Programme,—except Church history, and most of those which the Programme proposes to be taken at the option of the student in the third year, the third year itself being optional. These excepted subjects, however, were not altogether new, for either they were advanced portions of subjects already known to the institution, or they were akin to such subjects in a degree that could not fail to render them acceptable. On the other hand, all the subjects formerly taught are included in the Programme,—though some had been deferred in the latter, to the second, and some to the

third year. But if any of those formerly taught had been unnamed in the Programme, they would seem to have been still recognized under the general remark, "that it may often be judged expedient to teach to the students in the first year subjects not prescribed, &c., until the end of the second." It thus appears that the suggestions of the Programme have accorded with the wish of your Lordships, "not to add to or take from the existing subjects of instruction." The managers suppose this wish to imply a confidence that they, as managers, shall not introduce into the Normal college, which influences so sensibly the education of the country, any kind of instruction which has been untried and unapproved by the general sense of the country, and that they shall omit none which has been recommended by a general recognition of its importance. It may be added, that all the subjects embraced in the Programme for the first and second years were taught to the respective classes of students, in the course of the last year. The studies of those in training are of two kinds,—one consisting of the subjects which they shall be called upon to teach and to which, in the meantime, they apply in the same manner as common learners; the other, professional and relating to the principles and practice of teaching, including the whole matter of school-management. What progress did they appear to have made in the knowledge of those subjects that belong to the first class when they presented themselves for admission to the institution? The question touches on two points of some importance; *first*, their attainments, on entering, may be supposed to have been much the same and no more than those which, but for the Normal college, they would at once have carried to the service of education,—whence an inference may be obtained as to the need of such a seminary as the Normal college; and *again*, the comparison of their progress at entering and at leaving the institution serves to show how much they had profited by their studies there.

Progress made by students.

The progress made in the branches mentioned at the time of entering is variously ascertained,—that is, in a certain distinct way for each of the three classes of entrants. The Queen's scholar proves a certain measure of attainment at the annual examination for scholarship; the bursars on the Assembly's fund have been chosen after an examination, carefully conducted by the Assembly's Committee, in grammar, arithmetic, geography, Latin, and religious knowledge; the self-supporting have been orally examined by the Rector. It appears that some candidates in each of these classes came to the seminary, entirely unacquainted with certain branches appointed

for the first years study,—how many may be seen from the following table:—

	Total Number of Male Students.	Number unacquainted with						
		Church History.	Mechanics.	History.	Euclid.	Algebra.	Latin.	Drawing.
Queen's scholars - -	11	11	6	0	0	1	0	8
Assembly bursars -	19	19	19	17	5	6	2	18
Self-supporting - -	4	4	4	4	2	4	0	4
	34	34	29	21	7	11	2	30

In the simpler branches, the progress at entering is, of course, various; it is least various and most considerable among the Queen's scholars, and more considerable among the bursars than among the self-supporting. But, upon the whole, the disparity in this respect is believed to be not greater than usually occurs in the Humanity classes of any of the Scotch Universities; it is attended, however, with more inconvenience in the Normal college by reason of the different and more tutorial style of tuition there practised,—for it necessitates a division into classes to which the teaching power may not be equal. In short, no one enters the institution, as yet so qualified that the managers would willingly place him, then, in the charge of any school in which they might be interested.

Number of certificates obtained.

Again, of forty male students who were examined at the close of the Session 1855–6 as candidates for certificate, no less than thirty-two succeeded. This fact, viewed in connexion with the known state of their acquirements at entering, may be held to prove at once the closeness of their application throughout the session and the efficiency of the instruction they had received.

It is proper to observe here, with what care the managers have endeavoured to attract to the seminary students who have already made much progress in at least the simpler of the elementary branches. Their bursary equals in value the Queen's scholarship; it suffices for the maintenance of the student throughout the session; and the competition for it is very publicly invited from all parts of the country. Moreover, the self-supporting student receives certain small gratuities when he succeeds at the examination for certificate. By these means candidates are brought forward, who are in no respect among the lowest aspirants to the teacher's office. In reference to the last mentioned encouragement, the gratuities to self-supporting teachers, it seems matter for con-

sideration of the school authorities whether, by increasing these gratuities, the students of this class might not be so far increased in number as to render the Church bursaries unnecessary. The question, however, is one of lessening importance, as that relief to the Church fund seems in the course of being gradually produced in another manner, by the increasing number of Queen's scholars.

Time-table. The appended time-table shows the time allowed to the study of each branch (*see Appendix* A.) This table differs, for obvious reasons, from that which would be most suitable for ordinary pupils. One reason is, that a teacher should himself know more than he shall be called upon to teach, because the skill to teach well and the culture that suits his position, are the results of an application wider and somewhat different in kind from that which ordinarily he will have to guide in a common school. The student is, therefore, taught not to consider the rule of his own studies on this point, as that which must be applied to his future pupils. Withal, however, the time given to each study is, in great part, regulated here, as elsewhere, by the natural compass of the subject, its importance and its difficulty, or by the fitness of a partial study for some subjects more than for others, or simply by observing that, on certain subjects, no account is taken at the closing examination, of any progress attained beyond a certain point. All of these considerations seem to have properly influenced the arrangements of the time-table.

Teachers. The teachers, both of the normal and practising departments, are named, and their respective charges indicated in the appended list (*see Appendix* B.) The five first named and the matron are attached wholly to the institution; the rest only partially, and at the hours specified in the time-table for the branches which they severally have in charge. Their charges are distinct; and the more distinct they are, the greater the security for that harmony without which the best framework of a seminary acts as if something were amiss at the centre of its movements. The rector's charge, however, is distinct in a peculiar manner; and it is defined in the scheme of his duties, as importing, at once, the special instruction of the students, and a general oversight of the institution. A general oversight centered in the first officer is plainly required by the constitution of the seminary, which unites the distinct charges in a single plan; in cases of which sort, it is well and usual that a single judgment should preside. But while the instruction of the students is the rector's chief care, the practising department is not beyond his sphere, for this more special reason, that it serves and is essentially needed for the illustration of his lessons upon the art of teaching.

The rector's management evinces, throughout, that sound judgment and that sense of the solemn nature of his charge which befit the Head of such a seminary. The first master of the practising school, with much experience in tuition, is still an ardent student of whatever may improve his professional skill. The talents of the mathematical master are proved by your Lordships' recognition of his services as a "Resident Lecturer." One and all, including Matron, Music-master, &c., perform their duties in a manner that secures the entire satisfaction of the managers and myself; but they are too few for all the work that falls upon them, in carrying out the plan of the programme. And they have become too few by degrees; that is to say, their number has not been increased correspondingly to the progress of the institution. The defect is now apparent in its results. (1.) The division of the students into classes is less than it would be, if there were more teachers,—so that, in respect of progress, the inequalities in the same class are too great, while in other respects a separation had been preferable. Thus, the male and female students are joined together for lessons in religious knowledge, geography, and history. (2.) The rector has been under the necessity of giving much of his time to the instruction of the students in branches which might better have been left to the care of other teachers; the consequence of which to the training of the students,—to that part of it at least which is strictly professional,—will appear in the sequel. These inconveniences are now so apparent, that already the managers contemplate an addition to the staff of teachers for the ensuing session.

Insufficiency of present teaching power.

While the normal seminary has, thus, so much of its proper work in common with other schools, it holds unceasingly by the idea in which it originated,—that of providing a special education for schoolmasters. In this view the students are instructed by lecture, by examples of tuition, and by their own practice of tuition under superintendence. The three modes must be understood to form one body of instruction, for the rule requires to be supported by the example, and the example by the practice. The modes, however, are separable, and may be taken up in various order.—Should not the example and the practice precede the lecture? "When the example is the ground, it is set down with all circumstances which may sometimes control the discourse thereupon made, and sometimes supply it as a very pattern for action; whereas the examples alleged for the discourse's sake carry a servile aspect towards the discourse which they are brought in to make good."* The method of the Glasgow Normal College exactly accords with this suggestion: from the day he enters,

Special or professional instruction.

* Bacon's Adv. Learn.

the student daily sees how the master in the practising department teaches upon one branch or another, and himself teaches daily under the master's eye.

Lecture.

The Rector reserves his lectures on the principles of teaching to an advanced period of the session. He proposes, and I think with good reason, to commence them at an earlier period. In speaking, however, of these modes of special instruction, it is convenient to give to the lecture a precedence which is not assigned to it in the business of the schools. In the course of his lecture, the Rector states, that "inquiry is made into the personal, moral, and intellectual qualities necessary in the teacher exercising discipline, and into the various qualities which it should be his endeavour to develope in the children under his care;" and further, that the "analytic and synthetic methods are explained," and "the merits of the individual, collective, and simultaneous systems are considered."* The lecture thus appears to have in view two very distinct objects, the moral edification and the technical instruction of the student.

(1.) The first might be pursued in so very general a manner as to befit equally any class of hearers, but it is not so pursued here. The lecture, in this part of it, is occupied with the moral qualities and the manners which, in particular, it becomes a teacher, as such, to cultivate in himself; and with the manners and morals which he shall have to fashion, also, in those who will come under his charge as pupils; for each of these relations of master and pupil has its distinct moral characteristics in sufficient degree to afford the matter of much discourse. The managers, by their sanction of a lecture of this description, seem to indicate an opinion which, though common, it is well to find embodied in the management of a normal school. This is, that moral culture is an essential part of elementary education, and should be so considered in the conduct of an elementary school, as formally and explicitly as the culture of intelligence in one kind or another. If I mistake not, they thus signify farther, that they look to the moral character, more than to any talent or acquirement, as the real source of efficiency in the teacher, of "health to the navel and marrow to the bones." In the same part of his lecture, and in connexion with the moral, which includes the religious culture of the students, the Rector recommends a pretty general intellectual culture; and the connexion will be readily acknowledged. This general qualification (which is not made the subject of a positive demand) falls to be attained mainly by private studies; but these may be very ntly guided by the

* Rector's Report to General Assembly, 1855.

rector. The bent of the individual mind is, of course, to be then followed. But it is certain that, in general literature, inclusive of that great branch of it which has for its ground or subject-matter the practical exposition of Divine truth, much may be found, that would help to improve the understanding, the sentiment, the principles of every teacher, in reference to the work of his calling, and the conduct that becomes his position. To show exactly how such effects proceed from what is now referred to, would be an effectual way to recommend it. It is remarkable, in how many instances the normal college imparts a taste for study, which remains after the school course has been finished, and becomes the spur to farther progress. This has been the case in regard to the common school studies, and the same thing would take place in regard to others of which the advantage might be as well perceived.

In the programme for the third year, your Lordships have proposed "languages ancient or modern, as a means of intellectual discipline," and probably as conducive to the general culture here spoken of. It may be added, that, no better account of the studies of the school was given at the closing examination than in the paper on religious knowledge; but on the other hand, that the least satisfactory of all the exercises on that occasion was, in the paraphrasing of select passages in prose or verse,—an exercise depending much on the general culture now referred to.

Farther, among the influences indirectly of a moral description which have been established in the seminary may be mentioned the instructions given in drawing and in music; the first by Mr. Wilson, head master of the Government School of Art, the other also by a very competent master. The music, entirely vocal, is in kind both secular and sacred; and the lessons are much upon the principles or theory. It is given, not only for recreation at intervals in the school hours, but as a means of forming, exercising, and gratifying taste; and this result is much enhanced where the taste is fashioned, as it may be, so as to conduce to moral culture. It is explained that the study deserves attention for each of these ends, and not least for the last mentioned.

(2.) The Rector's report bears, that in addition to the points already noticed, his lecture specifies "certain general principles common to all successful methods, laid down and illustrated by details of their application to all the subjects of instruction commonly found in elementary schools."*

It is remarkable, how much less of the programme (May 1854) is occupied with the second than with the first great

* Rector's Report, 1855.

branch of studies; how much less, with the science and practice of teaching, than with the subjects of ordinary instruction in the knowledge of which the student is required to advance. This proceeds from the nature of the case; for pædagogics, while extending to all branches, are themselves but a single branch, *alius et idem*,—insomuch that, when one branch is well taught, it is almost certain that the other branches will not be ill taught by the same person, if his own knowledge of the latter be but as good. The Programme proposes, for each year, an examination on questions of school management, the only reference it makes to practice in teaching, for the first and second years; and for the third year, it adds "mental science as applied to education." But the third year is left to be taken at the student's option; and, as yet, the seminary has had no student of the third year. Mental science, therefore, as applied to education, has not yet been studied at the seminary; at least it has not been made a subject of express and direct study. Something, however, of mental science is necessarily embodied in the discourses of the rector, and so far it may be said to be imparted to the first and second years' students; for it could not very easily happen, that discourses of the kind, in the hands of one so intelligent, should fail to glance at certain parts of mental science containing those truths which are the foundation of many of the common-places of pædagogical practice.

One or two of the rules prescribed in teaching with their relative mental laws may be noticed, for example:—

(1.) To secure the pupil's interest in the task, a point essential to progress, it is enjoined that the task shall be made in some manner agreeable. This may be done by connecting with it some agreeable circumstance, though it were only the felt satisfaction of having once applied to it, in obedience to the master or to the parent, or to the call of duty. Any such circumstance makes the whole task agreeable, for this is what usually occurs among any set of associated ideas. The same result is obviously produced by a skilful manner of presenting the subject-matter itself, or even any portion of it.

(2.) To make an object lesson the more clear and interesting, it is recommended to exhibit for illustration an actual specimen of the object; the effect of which will be to exemplify the law by which a present sensible object vivifies the conception of all that happens to be said concerning it.

(3.) Frequent revisals of the lesson are enjoined, for it is a mental law that the impression of ideas is deepened by the frequency of their occurrence.

(4.) Attention, "that natural prayer of the soul to God for

farther illumination," originating in the desire to learn, its steadiness and success will depend upon the strength of that desire; for the strong desire, as we are told, brings up those thoughts that properly pertain to the subject, and keeps off others that may be connected with it, only in a casual or imperfect manner. Here are several of the common precepts in the art of teaching, all derived from that single chapter of mental science that relates to the association of ideas; and more might be added with an obvious derivation from the same source. It is true, that these precepts may be, and often are, very well practised, without any conscious reference of them to the general laws of mind from which they flow. But it is certain, that the hand of any workman is improved by some knowledge of the natural laws under which he works; and as much perhaps, as any one, it becomes the teacher to be somewhat enlightened in that respect. In his case, the theory and the practice, "se rencontrent et se completent en se pretant un appui mutuel."*

On the whole, if it shall be found, as probably it will, that very many of the students do not avail themselves of the third year's course, it may perhaps come to be considered, whether the applications of mental science to the art of teaching do not admit of being introduced at an earlier stage of the programme. At all events, the rule lately announced by your Lordships points in the same direction; the rule, namely, "that in future examinations not less than one-third part of every paper shall be confined to questions on method."† The lecture explains what is called the *analytic* or *explanatory*, and the *synthetic* or *suggestive* methods.‡ Both are exemplified and practised by the students in the practising school; the first, chiefly on arithmetic and English grammar; somewhat also on history, which is taught in this manner,—first, the outlines as given in Tytler's Elements; next, a more expanded history; lastly, the same elements resumed, with the new light acquired by the larger study of the intervening stage. This method of regress is good for the immediate purpose, and good also for impressing the more general lesson, that the same things assume a different appearance, according as the sense of the observer is more or less instructed about them. The *synthetic* method is employed exclusively on the reading lesson and religious knowledge, and not without due warning against the fault that so often besets it,—that of

* Gauthey, De l'Education.

† Circular, 14 August 1856.

‡ "Analysis in teaching," as the rector explains, "reduces step by step compound forms of thought or expression to such as are absolutely or approximately elementary; synthesis commencing with what is accepted as simple, rises by successive additions to the required degree of complexity."

mixing up with the lesson matters that are but casually connected with it, which happens, as before noticed, when the proper object of the lesson is not so steadily held in view as to exclude thoughts that are not well related to it. Each method takes the subject to which it is naturally best fitted, and both are methods of tuitionally treating the subject itself.

The other methods mentioned in the Rector's report are not methods of treating the subject itself, but merely of school organization. The individual, monitorial, and simultaneous methods are considered; and in the practising school they are more or less in operation—the individual upon all subjects, the monitorial upon all except religious knowledge, the simultaneous mainly on English reading, a syncretism of all on English reading, arithmetic, and geography. The method always suits the subject. But the monitorial is less used than it would be, but for the necessity of giving opportunities of teaching to the many students and the few pupil-teachers. These to some extent supersede monitors, but not wholly; for it is explained, that neither students nor pupil-teachers thus employed bring to view some of the chief properties or uses of the monitorial method. The simultaneous, again, is less practised in one division of the school than in another; the reason is, that that plan is not equally approved by all the masters, and that each in his department is pretty much at liberty to do as he deems best. The unity of the management throughout the school is thus in some degree affected,—in this instance perceptibly, though, as it happens, not with any very observable ill consequence. The lecture is generally followed by an oral examination upon the subject with which it had been occupied; and written exercises upon the same subjects, for some time discontinued, are about to be resumed. The rest of the instruction in the art of teaching is altogether practical; and it is given in the practising school, whither the student may be now followed, to observe the manner of his occupation there.

Practising school.

The practising school is attended by about 600 pupils, male and female. They are from all classes of the surrounding population, shopkeepers, tradesmen, workmen on the neighbouring canal,—none requiring more than the usual branches of elementary instruction which are given here, and none so poor that they may not afford the usual charges for instruction in any of such branches. The school consists of four divisions, under as many teachers, besides a sewing department under a matron. All of these teachers and the matron serve the institution, without retaining any part of their time for other occupations; it is served also by two masters, who come only at certain hours to instruct in Drawing and vocal music.

The pupils in each of the four divisions belong to that division only; but when a certain point of progress is attained they pass to the next immediately above. The subjects taught in each division are assigned by the managers, and, excepting in the lowest or infant division, they are the same in all, being the common elementary branches; but they are taught in each, from and to a certain different stage of progress, except in the head-master's division, where, of course, they may be taught to any possible extent. The four teachers are not co-ordinate, but, as already said, they are independent of each other; and to this must be ascribed that want of unity in the management which might be the cause of some disorder, if this were not prevented by the rectifying power of what is otherwise good in the organization, and good in the whole spirit of the institution. Here, then, in the practising school, the students are instructed by example and by practice.

Example. 1st. By example. At a certain hour daily, each division is attended by a party of the male students of the first year; the same in number for all,—each party frequenting the same division daily for a period of ten or eleven weeks, and passing thereafter to the other divisions in succession, so as to have visited all in the course of one session. At another hour daily the female students are distributed in like manner, with this exception, that they do not visit the division under the head master. The reason assigned for the exception is, that their own acquirements are scarcely equal to the task of teaching there; and this is noticed, as again evincing that farther provision is required for their better and their separate instruction. The hour is employed by the students, first, in seeing how the master gives the lesson of the day, and then in each giving the same lesson, under his eye, to an assigned section of the pupils. I remark that, on these occasions, the only subjects taught by the head master are English grammar and arithmetic, taught, indeed, in a very excellent manner; while the one, in which it is, above all, important that a good example should be shown, by reason of the greatest difficulty in managing it well, is the subject of Religious Knowledge. But the Head master knows that more variety of practice in his department is desirable, and, with the sanction of the Managers, he intends a change in this respect. It is proper to add, that when his example is not shown in the teaching of some subjects, the idea seems to have been, that the same method may, in the main, avail for various branches; and that the student, when himself a pupil, of necessity becomes acquainted, in some degree, with the methods which are admirably practised by the Rector and the Mathematical tutor; still, it is by

no means supposed that opportunities of actual practice are thus superseded.

I remark farther, that, the second years students do not regularly attend the practising school for the benefit of example or practice, except during the first year.* In other seminaries of the same sort, that part of the training is reserved to the second or last year. The managers now incline to have it introduced for both years; of the two, if they had to choose but one, preferring the second, inasmuch as the communication of knowledge naturally comes after its acquisition, or because there is a certain fitness in closing the course, as it were, with the same kind of training which had actually formed the first notion of a normal college.

Practice.

2nd. The extent to which the student practises the art of teaching has been already indicated in part, almost entirely, for it amounts to no more than this. In the Head master's division, and under his care, each student instructs, for the greater part of the hour, in English grammar and arithmetic, and in these alone. In the lower divisions, all the usual elementary branches are taught for the greater part of the hour, under view of the master of each division respectively, according to the rule "that every master shall have the charge of his own school, and of the students, Queen's scholars, and pupil-teachers, so long as they are employed in his class-room." The Head master is thus absent from the lower divisions altogether at the time in question; and the Rector is present but occasionally, for he is occupied, no less than five hours daily in instructing the students, male and female, in those branches that are not special to their calling, and in conducting the correspondence of the institution, as well as the general business of the managing committee. These avocations prevent the possibility of his being more in the practising school; and so much is this the case, that it is not usual to refer to the practising school for examples in connexion with the subject-matter of his lecture. Here then is one thing plainly amiss in the arrangements of the institution; the teaching-practice of the students is too little; too little at least under the immediate direction of those who are the best fitted to direct it, the Head master and the Rector. But the remedy is already in progress, for the rule has been adopted, that "the rector shall have a general superintendence of the whole institution entrusted to him;" in pursuance of which, the rector's occupation will be duly reduced in the work of teaching, and

* Their attendance in the practising school is now regular, during the second year, in consequence of additional accommodation having been provided.

augmented in that of supervising the practising department. The time employed in special instruction by the three modes now mentioned is little, compared to what is given to the more common studies. The latter occupy seven hours daily, during ten months of the year; and after all it is certain, generally speaking, that the student who at the year's end gains the third or lowest certificate, has not in general learnt more than enough either for gaining that certificate, or for doing the duties of the school to which it commonly leads.

Miscellaneous.

A few particulars are added in regard to the economical arrangements of the school.

Admission is still allowed to some male students upon their own charges and for partial sessions; their number during the last year was thirteen. They come for that sort of instruction which was the first and still is the distinguishing, though not the most engrossing, object of the seminary; they frequent the practising department, and that alone, desiring only to have the benefit of good examples, and of some corresponding practice in tuition. They do not join the regular students in the studies that are special, chiefly because the period of their stay does not permit them to seek more than some insight and guidance in the matters of practice mentioned. But in this subordinate and incomplete manner, the institution carries on its scheme of training, not without advantage to the country.

The building affords ample accommodation for all the classes, multiplied though these have been, in consequence of the late prolongation of the term of study to two years. The apparatus is abundant for all the common school purposes. The library has been well and specially chosen for the students' use, though it is little used, from the pre-occupation of their time in the prescribed studies of the school.

The managing Body is the Education Committee of the Church of Scotland, but they have sub-committed to a Board in Glasgow, of which the Rev. Dr. Craik, Minister of St. George's, is convener. The duties of the local management devolve mainly on the Convener, and in him they find all the talent, the industry, the warm and generous interest in the work which they assuredly demand.

A statement of the income and expenditure is appended. (*See Appendix* C.)

I have the honor to be, &c.

JOHN GORDON.

To the Right Honorable
The Lords of the Committee of Council on Education.

SPECIAL REPORT *on the* PRIZE-SCHEMES *in the Mining and Manufacturing Districts of* STAFFORDSHIRE *and* SHROPSHIRE, *by Her Majesty's Inspector of Schools, the* Rev. J. P. NORRIS, M.A., Fellow of Trinity College, Cambridge. —*for the Year* 1856.

SIR, Council Office, January 1857.

IN the Special Report which I had the honor to present to you in March, I stated that the successful operation of the Prize-Schemes had so clearly stimulated the children's progress, and so largely increased the number of candidates for prizes, that it had become desirable to introduce some modifications into the plan of our annual examinations.

I have now to report that in the course of the summer, the following amended scheme was proposed and accepted by the committees of the several associations :—

Prizes will henceforth be assigned to particular subjects.

There will be Prizes for—

1. Religious Knowledge.—The subject for this year being our Lord's Parables and the Sermon on the Mount.
2. Arithmetic.—Including Mensuration for higher Prize.
3. Geography and English History.—This year the Geography of England, and History of the Tudor reigns.
4. Grammar.—Parsing and (for higher Prize) Analysis of Sentences.
5. Drawing.—As taught in the School of Art.
6. Natural Philosophy.—Especially Chemistry and Geology, with reference to the trade of the district.
7. Needlework.—With cutting out for higher Prize.

These subjects are proposed under the following limitations, which apply to all the candidates.

A.—No candidate can be examined in more than two of the above seven subjects: in other words, no one can be a candidate for more than two of the seven classes of prizes. Each candidate may choose the two subjects* in which he will be examined, and inform the inspector (through his teacher) what two subjects he has chosen, at least four weeks before the day of examination.

B.—No candidate will be admitted who fails to pass a preliminary examination: this examination will occupy the first hour, will be conducted on slates, and will comprise the following exercises :—

(1.) To answer two, at least, out of three easy questions from St. Matthew's Gospel or the Book of Genesis; and

(2.) To work correctly two out of three easy sums in the first four rules of arithmetic. For girls, the simple rules; for boys, simple and compound.

N.B.—In this examination the writing, spelling, and notation will be taken especially into account. Dishonesty on the part of any of the candidates will at once exclude them.

---

* For reasons which will be stated in the latter portion of the report, this rule has been altered. It will henceforth stand thus: "Each candidate may choose *one of* the two subjects," &c. The paper on Holy Scripture will be proposed to *all* on the forenoon of the day of examination.

The prize examination will be conducted on paper. Each candidate must come prepared with slate, slate pencil, two sheets of ruled foolscap paper, pens, and ink; and, if a candidate for the drawing or needlework prize, with materials necessary for these exercises also.

The exercise in needlework will be a fine cotton shirt sleeve—the band to measure four inches in length. Candidates for the higher prize to cut it out at the time of examination.*

The remaining conditions of competition will be the same as heretofore; that is to say:—

1. Candidates for the Bible to be boys or girls who can produce certificates that their character is good, and that they have regularly attended, for two complete years subsequently to their ninth birthday, and are still attending, some school or schools approved by the Association and under Government inspection (regular attendance being defined to mean 176 days, exclusive of Sundays, in the twelve months). In the case of registered scholars the production of the registration ticket,† with a certificate of good character, will be sufficient.
2. Candidates for the Money-Prize to be boys or girls who can produce certificates that their character is good, and that they have already gained the preceding prize, and have continued to attend regularly, and are still attending the same school.
3. Candidates for the After-Prize to be boys who can produce certificates that their character is good, and that they (1) have gained one or both of the preceding prizes; (2) have completed their fifteenth, of and have not completed their eighteenth year; (3) are employed in connexion with the works of some member of the Association; and (4) have continued to attend some Sunday school;—a preference being given to those who have also attended a drawing, or a science, or an evening school.

In the last case the certificate is to be signed by the employer and by the minister; in the two former cases, to be signed by the teacher and countersigned by the minister.

This amended scheme was adopted in the examination held in the Potteries last month. Each candidate came prepared to be examined in two subjects. Of the 222 candidates who presented themselves, three-fourths had chosen Holy Scripture as one of their two subjects. As their second subject, a large majority of the boys chose arithmetic, and of the girls, needlework. Of the rest, some were examined in history and geography, and some in grammar. Only twelve, if I remember right, wished to be examined in drawing; and none chose natural philosophy.

The fact of so large a proportion having chosen to be examined in Scripture, and the very creditable way in which, for the most part, my questions on this subject were answered, gave me great satisfaction.

---

* Of course this exercise may be varied in subsequent years.

† This only applies to Staffordshire, where the *Registration Scheme* is in operation. *See* my remarks on this scheme in a "Letter to the Bishop of Lichfield," which may be had of Messrs. Wright, Booksellers, Stafford.

Some had suggested that all should be *required* to take Scripture as one of their two subjects. But I preferred to make it, on this occasion at all events, optional. My colleague, Mr. Arnold, was unable to give me his assistance; and therefore the examination of *all* the candidates, whether from Church schools or from Denominational schools, devolved on me. I came prepared to give one and the same paper of questions on religious knowledge to all who chose to take it. I hoped—indeed I was very confident—that none would object to my examining the children from the Wesleyan and British schools in Holy Scripture; but I thought it right to give them the option of declining this part of the examination. The result confirmed my anticipation; no kind of objection was made on the part of either the children or their teachers. A large number of the candidates from these schools chose the Scripture paper, and justified their choice by the general correctness and thoughtfulness of their answers. I subjoin the questions proposed to them. According to the scheme of examination previously announced, the early questions relate to the Sermon on the Mount, the latter to our Lord's Parables.

Sermon on the Mount.

1. Give, as concisely as you can, the contents of the Sermon on the Mount.
2. What do you suppose our Saviour meant by,—
   "The poor in spirit,"
   "The pure in heart,"
   "Hungering and thirsting after righteousness,"
   "The salt of the earth?"
3. In what way is it shown that God's commandments relate as much to our inward feelings and words, as to our outward acts?
4. How does our Lord exhort his hearers not to be over anxious about worldly things?
5. How are we encouraged to hope that God will hear and answer prayer?
6. How is it shown that *knowledge* of God's Will is of no avail except we also perform it?

Parables.

1. What does our Lord intend to teach by the parables of (*a*) the sower (*b*) the ten virgins, (*c*) the prodigal son?
2. Relate, as nearly as you can in the words of Scripture, the parable of the Good Samaritan, and state the lesson to be drawn from it. By which of the Evangelists is this parable recorded?
3. Which of the parables are designed to show the progress of Christianity in the world, and which the work of grace in the heart?
4. From what parable may we learn that there will always be bad and insincere people in the Church of Christ? And how does the parable of the marriage supper show the end of such men?
5. What parables teach us the several duties of earnest prayer, humility, and compassion for our fellow creatures?
6. Explain clearly the parable of the unjust steward.

I should be glad, if my space permitted it, to give some of the children's answers to these questions. I observed on this occasion, what I have noticed in previous examinations, that the answers to questions on religious subjects were superior, in point of thoughtfulness and intelligence, to the answers on other subjects. Of course my experience is limited, and relates to schools under inspection only; but in the 300 or 400 schools which come under my inspection, I do not hesitate to say that the instruction in Holy Scripture is superior to the instruction given in any other subject. It is my habit, when I am examining a class of children, to mark their knowledge as *bad*, if they imperfectly remember and imperfectly understand what they have been taught; as *moderate*, if they remember but imperfectly understand it; as *fair*, if they remember and fairly well understand it; and as *good*, if they appear to have made it so completely their own that they can think out answers to new questions on the same subject. From notes of this kind made in the course of my tours of inspection during the past year, I have constructed the following table, showing the quality of the instruction given in five several subjects.

Of the schools which I examined—

In Scripture,	35 per cent. were marked	- -	*good*.
	46 „ „	- -	*fair*.
	81 „ „	- -	*good* or *fair*.
In history,	28 per cent. were marked	- -	*good*.
	49 „ „	- -	*fair*.
	77 „ „	- -	*good* or *fair*.
In grammar,	27 per cent. were marked	- -	*good*.
	42 „ „	- -	*fair*.
	69 „ „	- -	*good* or *fair*.
In geography,	23 per cent. were marked	- -	*good*.
	46 „ „	- -	*fair*.
	69 „ „	- -	*good* or *fair*.
In arithmetic,	18 per cent. were marked	- -	*good*.
	49 „ „	- -	*fair*.
	67 „ „	- -	*good* or *fair*.

So far as the superiority of the children's knowledge of Scripture is concerned, these results tally with the results of this prize examination. I find that of the children

examined the number that reached the prize standard was as follows:—

35 (boys and girls) in Scripture.	8 (boys and girls) in geography and history.
22 (girls) in needlework.	7 „ in grammar.
13 (boys and girls) in arithmetic.	4 (boys) in drawing.

This general superiority of children's knowledge of Holy Scripture, combined with the fact that, in this examination, out of more than 200 children drawn from twenty different schools, *three fourths* voluntarily chose Scripture as the subject in which they would be examined, furnishes, I think, a very sufficient answer to those who affirm that schools of secular instruction would be more popular in this country than schools which include religious teaching.

There was another point in which the experience of this examination was satisfactory;—although, as in the last case, my own conviction was so entirely established beforehand that I needed nothing further to confirm it. But to others who may still be labouring under the false notion that what is called the *religious difficulty* is really the great obstacle to education in England, it may not be uninteresting to observe how harmoniously and easily 200 children of various religious denominations were examined in their Scriptural knowledge by one and the same examiner.*

On future occasions it may be found needful to modify the scheme of examination given above in two important points.

In these crowded competitions it is so difficult to find either time or space for the *preliminary* examination, that I question whether it will be possible to continue it. And yet to admit the whole number of candidates to the paper examination, without eliminating any, is almost equally impossible. The best solution of the difficulty would be that the teachers and managers in their several schools, previously to sending in the names of the candidates, should institute a preliminary examination of this kind, and so exclude such as had no chance of acquitting themselves well in the examination.

---

* I cannot forbear expressing here, what I have often expressed in conversation, my earnest wish that the British and Foreign School Society would re-consider their *concordat* with the Committee of Council on Education, and allow their schools to be visited by the same Inspector as the Church Schools, and to be examined like them in religious knowledge. The Inspector would naturally, and as a matter of course, in their case, as in the case of Church Schools, inquire in each school what branches of the subject had been specially taught, and conduct his examination accordingly. I have been repeatedly told, by persons connected with British Schools, that they deeply regret that rule of their Society which forbids the Government Inspector to examine their children in Scripture.

The other point in which the plan needs amendment is connected with a technical difficulty which I only discovered when I came practically to test the scheme in operation. Where the time is limited to the forenoon and afternoon of one day, and where each candidate may choose *any* two out of six or seven subjects of examination, it is clearly impossible to make the examination in any one of the subjects simultaneous for all who take that subject. Hence it cannot fail to happen, that a particular paper of questions should be given out to certain children in the morning, and again to certain other children in the afternoon. For instance, of three papers of questions, which we will call 1, 2, and 3, A takes 1 and 2, B takes 1 and 3, and C takes 2 and 3; it is clear that either 2 or 3 must be given out both in the morning and in the afternoon. Where this is the case, it is impossible to be sure that some of the afternoon candidates may not have seen or heard something of their paper in the interval between the morning and afternoon examination.

The results of the Potteries examination, and the confessedly paramount importance of Scripture knowledge, induce me to propose, as a solution of this difficulty, that henceforth the choice be limited to *one* of the two subjects, the morning subject being indispensably Holy Scripture. Thus there will be one subject for all in the morning, and choice among five or six subjects in the afternoon. Excellence in the morning examination alone will secure a prize; excellence in an after noon subject ought not to entitle to a prize, unless a certain standard (say half the maximum marks) have been attained in the Scripture paper.

These, then, are the regulations according to which I propose to conduct the prize examinations during the ensuing year. In drawing them up, I have been guided chiefly by two considerations; *first*, by a conviction that a large number of children cannot equitably or thoroughly be examined in more than two subjects in the course of one day; *second*, by a wish at the same time to raise the standard, and to extend the range, of the examination.

Hitherto the examinations have been almost exclusively in arithmetic and religious knowledge, with needlwork for the girls. With a view of ascertaining what progress had been indicated in the former subjects by these yearly examinations, the papers worked in South Staffordshire in February 1852 (our first examination) have been carefully compared with the papers worked by candidates from the same group of schools in March 1856.

In arithmetic a decided progress is shown by the following table :—

Number per Cent. of Children by whom Sums in the following Rules were correctly worked:—

	1852.	1856.
Notation and Simple Rules	80	80
Compound Rules	54	78
Proportion	26	48
Higher Rules	18	24
Mensuration	0	1

In religious knowledge, writing, and spelling, the results cannot be so clearly tabulated, but the progress is equally satisfactory.

That the Prize-schemes are still successful in realizing their other, if possible, more important purpose, inducing the children to continue at school to a later age, is shown very satisfactorily by the following table, exhibiting the number of candidates, and their respective ages, in the years 1855 and 1856 :—

	Number of Candidates.		Average Age.			
	1855.	1856.	1855.		1856.	
			Boys.	Girls.	Boys.	Girls.
South Staffordshire, East	307	326	12½	13½	12⅔	13
South Staffordshire, West	130	130	12⅜	13	12⅔	13
North Staffordshire	188	222	12	12¾	13	13
Shropshire	71	121	12¼	12⅓	13¼	13

The way in which the money given in prizes has been used is on the whole very satisfactory. Out of sixty children who received money prizes during the past year, and of whom I have returns, I find that—

31 invested their money in savings' banks.
9 invested it in some other way, at interest.
10 gave it to their parents.
10 spent it.

I am able to show in the Appendix the balance sheets of the four Prize-scheme Associations; and there will be found, also, the list of successful candidates in the Shropshire examination which took place in May, and the list of those who obtained prizes last month at Stoke-upon-Trent. The results of the South Staffordshire examinations, held in March, were included in my last report.

To sum up this report, I may say, very confidently, that thus far the system of prizes, now at the end of its fifth year of trial, has been a successful experiment.

It has encouraged the teachers, awakened a more general interest in their work, and induced a large number of parents to care more than heretofore about their children's schooling. For the children it has done much more; it has retained many of them for a longer period under the wholesome discipline of school; it has stimulated their industry; it has given them a new pleasure, the pleasure of a generous emulation; and it has taught them that life is a *career* in which honest self-reliant exertion is very sure to bring success, and to win for them the respect of their fellow men.

I have the honor to be, &c.

J. P. Norris.

The Secretary of the Education Department.

		Elizabeth Tranter	Madeley Wood, W.S.

The following candidates had received a Bible Prize in 1855, but failed this year to reach the standard for the 3*l.* prize. A 1*l.* prize was therefore awarded to them.

Wm. H. Bailey -	Ketley.	Sarah Haynes - -	Madeley.
Wm. M. Barrett -	Madeley Wood, W.S.	Edwin Podmore -	Lilleshall.
Ann Baycott - -	Poole Hill.	Chas. Skitt - -	Madeley.
John F. Hinsley -	Madeley Wood, W.S.		

APPENDIX

TO

MINUTES OF THE COMMITTEE OF COUNCIL ON EDUCATION.

1856-7.

DETAILED STATEMENT of ANNUAL GRANTS conditionally payable, in Year ending 31 October 1857, for AUGMENTATION of SALARIES of CERTIFICATED SCHOOLMASTERS and SCHOOLMISTRESSES; for RETIRING PENSIONS to late Teachers of Schools under Inspection; for STIPENDS of ASSISTANT TEACHERS; and on account of APPRENTICED PUPIL-TEACHERS (with Names of Apprentices, Year of Apprenticeship, and Month in current Year in which Annual Examination is due.

*** *This Statement has been corrected to show the results of all Examinations reported to the Committee of Council on Education* before the end of December 1856, *but does* not *include any decisions* subsequent to that date. In cases, therefore, where reports are in arrear for more than two months (November and December), the number and standing of the apprentices have had to be stated for the *current* as they were for the *past* year. These cases are marked with an asterisk (*).

REFORMATORY SCHOOLS.

MINUTE, dated 2 June 1856, offering *Grants* for promotion of Schools wherein Children of *Criminal and Abandoned Classes* may be reformed by *Industrial Training.*

At the Council Chamber, Whitehall, the 2nd day of June 1856.

BY THE LORDS OF THE COMMITTEE ON EDUCATION, OF HER MAJESTY'S MOST HONORABLE PRIVY COUNCIL.

THEIR Lordships resolved to continue the grants at present made in aid of field gardens and workshops *annexed to common elementary day schools*, but, as regards "ragged or reformatory schools," to cancel all existing Minutes, and to provide as follows (no school being admissible to aid under this Minute unless it be *industrial* in its character, and unless the scholars be taken exclusively from *the criminal or abandoned classes*):—

(1.) To pay half of the rent.

(2.) To pay one-third of the annual cost of tools and of raw material for labour.

(3.) To make grants towards the cost of books, maps, and apparatus, upon the same terms as to other schools.

(4.) In order to encourage the preparation of suitable schoolmasters for employment in these institutions, to grant the sum of 35*l.* to the treasurer of any reformatory school in respect of every person, qualified as next under-mentioned, who shall have been boarded, lodged, and trained as a master in the reformatory school during a period of twelve months, viz.:—

  (*a.*) All teachers of common elementary day schools holding certificates of merit, or registered.

  (*b.*) All teachers of workhouse schools holding certificates of efficiency.

  (*c.*) All students in normal colleges under inspection, who shall have resided therein not less than one year, and shall have successfully passed the examination at the end of the year before Her Majesty's Inspectors of Schools.

Their Lordships also resolved to reimburse to the said treasurer any sum not exceeding 6*l.*, which it may have been found necessary to advance for the purpose of travelling or personal expenses to such persons in training.

The conditions of all such grants to be :—

(*a.*) That the reformatory contain at least forty inmates, and be sanctioned or certified by the Secretary of State, under the Acts 17 & 18 Vict, c. 74. and c. 86.

(*b.*) That Her Majesty's Inspectors of Schools recommend the school, from year to year, as a suitable place, in its character and arrangements, for receiving masters into training for reformatory schools.

(*c.*) That payment of the grant be made by quarterly instalments ; and that the same certificates of good conduct be required from the principal of the institution, on behalf of each person in training, as are now required in the case of Queen's scholars.

(5.) To grant half of the salary agreed to be paid by the managers to every master and to every assistant master, in any ragged or reformatory school, in the following ratio :—

For any number of inmates not exceeding 25, 1 master ;
Between 25 and 50, 1 master, 1 assistant.

An additional assistant to be allowable for every 25 additional inmates above 50 ; and an additional master (instead of an assistant) for the first 25 inmates after every 100 ; these allowances giving 1 master and 3 assistants as the ordinary staff for every 100 inmates.

Every master, if untrained, must be upwards of 25 years old, and every assistant upwards of 18 years old. Industrial instructors may be counted as assistants.

If the salary agreed by the managers to be paid to an assistant exceed half of that of a master in the same school, the excess will not be reckoned in calculating the sum to be reimbursed by the Committee of Council on Education.

Her Majesty's Inspectors of Schools must report favourably, in each year for which the grant is made, with especial reference to the following points :—

(*a.*) That the ability and character of the schoolmaster and assistants are satisfactory.

(*b.*) That habits of obedience, cleanliness, and order are enforced in the school.

(6.) To grant as capitation, upon every child (according to the number in average attendance during the year preceding the annual inspection) *who is not paid for by the Lords Commissioners of the Treasury, under the Act* 17 *&* 18 *Vict., c.* 86., the sum of 50*s.* per annum, provided that such child be fed at the school.

Circular to Her Majesty's Inspectors of Schools, explanatory of foregoing Minute, dating 2 June 1856, relating to conditions of aid to Reformatory Schools.

SIR, *Education Department, July* 1856.

I AM directed to bring under your notice the enclosed copy of a Minute, dated 2 June 1856, on reformatory schools. Certified and uncertified reformatories.

The inspection of reformatories will be arranged upon the same plan as that of common elementary schools, *i.e.*, a certain month will be fixed for the Inspector's visit, and all annual grants (*except those under Section 4 of the Minute*) will be paid for years ending at that date. The institutions to be inspected will fall into two classes. There will be—

1. Those institutions which are conducted upon a considerable scale, and which are recognized by the Secretary of State in pursuance of Acts of Parliament. But there will also be—
5. A large number of smaller institutions which now, under the names of asylums, homes, refuges, ragged schools, and the like, attempt, with varying degrees of completeness, to effect the object proposed by the Minute.

Both classes of institutions (the larger and the smaller) may share *equally* in the following forms of aid :—They may receive half the rent; one third of the cost of tools, books, and raw materials of labour; one-half of the salaries; and an annual capitation-grant upon every child who is provided with food as well as instruction, and who is not otherwise paid for by the Treasury.

The larger and certified institutions will however enjoy *this further privilege*, that, they may receive candidates, from certain specified classes, for training as masters, and may be paid on their account such a sum as nearly corresponds to the allowance for a Queen's scholar in a normal college of the ordinary kind.

The system of examination and the course of instruction proper for an ordinary normal college would be unsuited to a reformatory. In abandoning, therefore, any such requisition, it has been an object to specify those classes of candidates who have given proof that they *already* possess a fair amount of intellectual acquirements, as well as some familiarity with the ordinary routine of school-keeping. The reception of such candidates into training will require no addition to the staff for their own instruction; occasional lectures, and examinations by the principal, will suffice to keep up their knowledge; and they will be useful assistants to the ordinary officers of the institution, at the same time that they are qualifying themselves for independent employment. Candidates in training.

In accordance with this view, the allowance which, in the case of a Queen's scholar, is divided between his own bursary and the grant made to the college, for his examination at the end of each year, is in the present instance consolidated. Her Majesty's Inspectors, at their annual visits, will report upon the qualifications and ability of the candidates in training, but the candidates will not be further subjected to a general examination in the same manner as students in ordinary normal colleges.

As the number of institutions in which masters can be suitably trained is not likely to be large, the special payments allowable *under the fourth Section of the Minute* will be separated entirely from the rest which are to be issued on the annual report of the Inspectors.

It is not supposed by their Lordships that the attainment implied by the definition of the classes from which the choice of candidates for training must be made constitute all that is wanted in a reformatory teacher. Their Lordships do consider, however, that there is a very close connexion between the peculiar qualifications of such a teacher and the attainments in question, *as means through which those qualifications may operate with increased effect.* Intellectual discipline as an instrument of reformation.

If intellectual instruction ought to occupy any place at all in the reformatory process, it ought to be good as far as it goes.

Criminal boys often possess sharpness and cunning, but this is a very different thing from acquiring a power of sustained attention and a methodical application of the mind. It is in the inculcation of these last-mentioned habits that intellectual discipline becomes identical with moral discipline of a high order. The humbleness of the form and the limited degree in which intellectual instruction may be imparted do not alter this truth, nor dispense with the necessity for an able teacher. In more than one reformatory which has been inspected, the intellectual instruction is not only limited but bad. School-lessons should take their turn with hard bodily labour, but should never be allowed to supersede it as the staple of each reformatory institution.

Teachers employed in reformatories.

Grants under the fifth section of the Minute are *not* confined to those masters and assistants who have been trained, nor are they offered in the way of augmentation. The managers will receive half the sums which they return as the salaries agreed to be paid; but, so long as those salaries are paid, the grants may be carried to the general account of the school. Their Lordships reserve to themselves discretion to determine whether any particular salary, by its amount or otherwise, falls fairly within the scope of the Minute.

You will observe that the Government leaves the choice of teachers absolutely to the managers, interposing no test whatever, except the Inspector's annual report *upon certain specified points.*

According to the organization adopted in each reformatory, the *master*, for whose salary allowance is made, may or may not be the principal teacher in school. If he is not, the school-teacher may be counted among the *assistants* in claiming a grant, according to the number of instructors admissible under the Minute. The principal officer ought in all cases to be well enough instructed to be able to control, and to be responsible for, the work of the school-room.

The literary ability of a teacher may be regarded as sufficient if the Inspector is satisfied that the boys under his charge learn to read, write, and cipher, in such a manner as to acquire *the practical command of those arts in earning their bread and making their way in the world.* A boy who reads with difficulty and without intelligence, who writes imperfectly and spells ill, who cannot readily apply the rules of arithmetic to a common transaction of the shop or of wages, might as well, for most practical purposes, be unable to read, write, or cipher at all. You should apply this test rigorously in examining all such boys as are on the eve of leaving the school.

In the same way as to religious knowledge, you should endeavour to ascertain that the doctrines and maxims of Christianity are taught in such a manner as to be likely to become motives and rules of conduct.

In the same spirit you will bear in mind that no oral delivery of moral lessons can be so effective as that which results from daily practice. You will not, therefore, allow any general professions to weigh against the evidence which a school, or workshop, may present *in itself* of a want of order, obedience, and cleanliness. A disobedient, dirty, ill-conditioned lad is not to be talked out of those habits, but can only be cured by being obliged to live in daily and hourly contact with the practical opposites of them.

Inmates on whom capitation grant is allowed must be fed, not paid for by Treasury, and under twenty-one years of age.

With regard to the rule which confines the capitation grant to those children who are—

1. Fed, and
2. Not paid for by the Treasury,

the former test is adopted, because experience seems to show that, without the offer of food, the lowest part of the juvenile population cannot be reached by instruction, and because, while this circumstance renders ragged or reformatory schools more costly than others, it also serves to distinguish them broadly from common elementary day schools. You will be careful on all occasions to inquire and report whether the reformatory is *confined* to the most degraded class of children.

It has been known to happen that a ragged school, by the offer of food, has emptied a neighbouring day school, where the parents of the children were previously paying for their instruction; *such a result is an unmixed evil.* No positive rule can supply the place of personal vigilance and good faith, on the part of the managers, in guarding against such abuses. It is to be hoped that, if proper pains be taken to explain the nature of these schools, few decent parents, however poor, will be so wanting in honest pride as to be tempted to send their children to them. The relief of want should not be confounded with the remedy for vice and crime. The honest children of honest parents should no more be brought to reformatories for education than to hospitals for food.

The Committee of Council considered the question whether lodging as well as food should be taken into account, and decided in the negative, except so far as the allowance towards rent may suffice to meet the cost of dormitories. There are many excellent institutions in which the inmates are not lodged; and in some others, where they are lodged, it would have been desirable to secure much more complete premises and arrangements for classification, before undertaking any such charge. You will carefully examine and report upon the day-rooms, dormitories, and offices, no less than the school-rooms and workshops, so as to form an opinion of the entire life of the inmates, and of the habits likely to result from it.

The capitation grant is not allowed on those children who are paid for by the Treasury, because the Act 17 & 18 Vict., cap. 86., sect. 3., enables the Lords of the Treasury to make a sufficient allowance for general care and maintenance in a single sum.

Their Lordships, following the analogy of the Act 17 & 18 Vict., cap. 86., sect. 2., have decided that no inmates of ragged or reformatory schools, who are above twenty-one years of age, are to be reckoned in calculating such allowances from the education grant as depend upon the number of inmates. Their Lordships do not regard it as advisable to associate persons who have reached mature years in crime with youths in one and the same reformatory.

My Lords intend, as a general rule, to refer those institutions in England and Wales which fall exclusively under the Minute of 2 June 1856 to such of Her Majesty's Inspectors as are charged with the inspection of Workhouse schools.

I have the honor to be, &c.

(Signed) R. R. W. Lingen.

To Her Majesty's Inspectors of Schools.

Further Circular to Her Majesty's Inspectors of Schools, explanatory of Minute dated 2 June 1856, as regards aid towards payment of Rent for Reformatories.

Sir, *Education Department, 21 November 1856.*

In continuation of the instructions with which you have already been furnished respecting the administration of the Minute dated 2 June 1856, for the promotion of reformatory schools, I am directed by the Committee of Council on Education to request your attention to certain questions which have arisen under that part of the Minute which offers an allowance equal to half the rent of the premises.

The Committee ruled that no grant should be made for building reformatories. The experimental state of the whole subject of preventive and reformatory discipline afforded a sufficient reason for not sinking large sums of public money at once in undertakings which might have to be abandoned.

The rent contemplated by the Minute is such as a *bonâ fide* tenant pays to a landlord, in the ordinary course of taking and letting a house. But, in the application of this principle, two cases occur which are not free from difficulty.

1. The proprietors of suitable premises allow them to be occupied as reformatories without exacting the rent which those same premises might otherwise be made to yield.

2. Premises have been acquired, and settled in permanent trust, for which, although no rent is paid, and no one has the right to claim any, nevertheless the occupation of them as reformatories represents from year to year a certain value, under one of those heads to which the Minute purports to appropriate assistance.

The difficulty felt in departing from the literal sense of the Minute consists in the fact that, while an actual rent will naturally be kept as low as the managers can contrive to make it, an estimated or nominal rent will be subject to an opposite tendency, inasmuch as the proportion of it, which may be recovered under the Minute, is not part of any positive expenditure, but is simply so much added to the general funds.

The experience of this Department proves incontestably that neither managers, nor even professional surveyors, confine themselves to market value in making estimates under such circumstances. The charitable object is held to excuse a degree of laxity which it is very difficult to control by any official check.

Their Lordships, looking at all the circumstances of the case, and wishing to interpret the Minute as liberally as is consistent with a *bonâ fide* observance of the limitations which it imposes, have agreed to the following rules of practice:—

1. *Where the premises are* NOT *conveyed in trust,* the managers can only obtain the allowance for rent by showing that they are bound under some lease, or valid legal agreement, to pay a specific amount; that such amount is annually paid by the treasurer, and that it duly appears in his accounts.

My Lords would consider it to be a reason for not allowing half the rent that the lessor had entered into any binding agreement to return it, inasmuch as such a step would relieve the managers from those prudential considerations which might otherwise induce them to limit the amount, as long as the lessor was at liberty to change his mind, or as long as his interest was liable to pass into other hands.

What the lessor may choose to do with the rent which he receives from time to time is his own concern only.

2. *Where the premises* ARE *held in permanent trust,* and cannot become the subject of any claim for rent, no estimated allowance will be made. The Minutes of the Committee of Council have never been allowed to have a retrospective force. Those promoters of schools who built them before 1833 have not been relieved by the subsequent Parliamentary grants from any part of the outlay which they had incurred; nor have such as performed the same public work between 1833 and 1853 derived any benefit from the more ample grants which have been available since the latter date. The managers who have acquired a reformatory in absolute possession, and so cannot now obtain the allowance for rent, are in no worse position than the persons just named, and cannot be differently treated.

I have the honor to be, &c.

(Signed) R. R. W. LINGEN.

To Her Majesty's Inspectors of Schools.

Form of Report, by Her Majesty's Inspectors, on Schools aided under the Minute of 2 June 1856.—IX. R.

N.B.—This form is to be filled up, as far as the middle of the 4th page, *before the arrival* of H.M. Inspector, and is to be delivered to him *on his arrival.*

REPORT ON REFORMATORY SCHOOL,

At _____, *in the County of* _____

visited on the _____ *day of* _____ 185__, *by* _____ *Her Majesty's Inspector.*

Visit due on the _____ *day of* _____ 185__.

1. *Premises.*
   a. Extent.
   b. Tenure.
   c. Rent (*amount, to whom paid, and whether under any lease or written agreement*).

2. *Establishment* (enter each person employed).

Name in full.	Age.	Date of Appointment.	Salary.	Specific Duty. (If the same officer teach more than one branch of industry, enter the second, or other branch, in a separate line in this column, *as if the name had been repeated in the first column;* and similarly in the following column.)	Specific Qualification. (A certificate from some respectable gardener, agriculturist, or master-workman, &c., should be filed with the report; or his signature, description, and address, should be entered in this column as a voucher for the competency of every *industrial* instructor.)	Engaged in instructing. Number of Persons.	Number of Hours per Week.
Principal* -							
Assistant* -							

3. Present number of inmates:

	Males.	Females.	Total.
Between 10 and 16 years old -			
Over 16 years old - - -			
Between 16 and 21 years old -			
Over 21 years old - - -			
TOTAL - -			

* If there has been a change of teacher during the year preceding the date fixed for the inspection, enter the name of *each* teacher, with the full annual *rate* of salary and other particulars opposite to it; and add, in a note, the exact date at which the former teacher *quitted* his charge.

4. How many of the total are :—
   a. Fed, and *whether wholly, or in part?*
   b. Lodged?
   c. Clothed?
   d. Paid for by the Treasury, by order of the Secretary of State?

5. What, during the past year, has been the average number of *inmates fed in the Institution, and not paid for by the Treasury, by order of the Secretary of State?*

6. Fill up the following table (the accounts of successive years will be carefully examined to see that the dates are continuous) :—

H.M. Inspector is instructed not to allow estimates or approximations to appear in this account, but to require the last complete account which can be found, of whatever date. If no such account exists, the Inspector is to leave this table blank, and report the fact.

TEACHERS' SALARIES.

CIRCULAR (with two Enclosures) to HER MAJESTY'S INSPECTORS OF PAROCHIAL UNION SCHOOLS, on certain CHANGES in SCALE of ALLOWANCES from PARLIAMENTARY GRANT for SALARIES of TEACHERS in PAROCHIAL UNION SCHOOLS.

SIR, *Education Department*, 17 *June* 1856.

I AM directed to request your attention to the enclosed copy of a circular (*Enclosure* No. 1.) from the Poor Law Board, dated the 3rd instant, and of a letter (*Enclosure* No. 2.) from this office, dated the 3rd of May, setting forth the reasons of the new regulation.

I am to request your especial attention to the last paragraph of the latter document, and I am to state that their Lordships wish the augmented capitation to be recommended in those cases only where reading, writing, arithmetic, and some sort of industrial training are imparted in a manner that secures to the children, on quitting the workhouse, a practical command over those all-important helps towards earning their bread and making their way in the world.

I have the honor to be, &c.
(Signed) R. R. W. LINGEN.

To Her Majesty's Inspector of Parochial Union Schools.

Enclosure (referred to in foregoing Letter) No. 1.

SIR, *Poor Law Board, Whitehall*, 3 *June* 1856.

THE Poor Law Board, in conjunction with the Committee of Council on Education, having made some modification in the existing plan for the distribution of the Parliamentary Grant towards the repayment of the salaries of teachers in workhouse schools, so far as respects the capitation fee, direct me to call the attention of Boards of Guardians to the subject.

Under the existing plan, which is set forth in the Board's Circular Letter of the 1st of December 1852, the capitation fee allowed for each scholar is as follows:—

Certificates of efficiency	1, 2, 3	10*s.*
Certificates of competency	1, 2, 3	5*s.*
Certificates of probation	1, 2	3*s.*

It has now been determined, with a view to promote improvement among the teachers in workhouse schools, and to afford further encouragement to good school-keeping, that the allowance to the teachers in respect of each scholar shall in future be made in accordance with the scale set forth in the following table:—

PAYMENT from PARLIAMENTARY GRANT.

Certificates.	Masters.		Mistresses.		Sum to be allowed in respect of each Scholar, in addition to Minimum Allowance.
	Minimum Allowance from Grant.	Maximum Allowance from Grant.	Minimum Allowance from Grant.	Maximum Allowance from Grant.	
	£	£	£	£	*s.*
Efficiency - 1	30	60	24	48	12
2	30	55	24	44	11
3	30	50	24	40	10
Competency - 1	25	45	20	36	7
2	25	40	20	32	6
3	25	35	20	28	5
Probation - 1	20	30	16	24	4
2	20	25	16	20	3
3	20	20	16	16	–
Permission - -	15	15	12	12	–

The Guardians will observe that the minimum and maximum amounts allowed according to this table for each description of certificates, irrespective of the capitation fees, are the same as heretofore.

I am directed to add that the certificate in each case will specify the average number of scholars under the care of the teacher, and the amount to be allowed to the Guardians from the grant.

I am, &c.
(Signed) COURTENAY,
Secretary.

To the Clerk to the Guardians.

Enclosure (referred to in foregoing Letter) No. 2.

SIR, *Education Department, 3 May* 1856.

I AM directed to request that you will submit to the President of the Poor Law Board the following proposal on the part of the Committee of Council, respecting the payments made to teachers in workhouse schools, pursuant to the Circular of your Board, dated 1 December 1852.

The payments are made, as you are well aware, in certain classes, to each of which a minimum and a maximum payment is annexed, the difference between the two depending on the number of scholars.

The several classes are determined by the report of Her Majesty's Inspector, on (1.) the attainments of the teacher, (2.) the state of the school; the attainments of the teacher being judged according to the scale set forth in a Minute of this Committee, dated 18 December 1847, which is embodied in the Circular of your Board, dated 31 March 1848. See Reports of Parochial Union Schools, of 1847-8-9, pp. x, xi, xxvii, xxv.

My Lords hold it to be very important that two principles should be kept constantly in operation, as tending to promote improvement among the eachers of workhouse schools, viz.:—

1. Progress, by examination, from class to class; and
2. Annual encouragement to good school-keeping within each class.

The latter object is so little accomplished at present that there is a constant tendency to carry from one class to the other a teacher who has not the pre-

scribed attainments, for the sake of being able to confer some present reward for length of service and diligent discharge of duty to the best of the teacher's ability. The operation, however, of this tendency is mischievous, for teachers are promoted who do not in reality possess the attainments needful to put the children under their charge upon the same footing as others at the commencement of life, and the motive to improve their attainments is cut off by allowing promotion to take effect without such improvement.

The difficulty would be in a great measure removed, and the teacher might be encouraged to prepare for examination once in three or four years, without neglecting his school in the meantime, if, within each class, the capitation grant varied with the grades.

At present no amount of good school-keeping benefits a teacher who gets his boys taken off into service fast enough to keep his numbers from increasing, but who is not yet ready, in point of attainments, to pass into the next class.

My Lords propose the following change in the table printed in the Circular of your Board dated 1 December 1852.

Certificate.	Sum now allowed from Grant in respect of each Scholar between Minimum and Maximum Allowance.	Sum proposed to be allowed from Grant in respect of each Scholar between Minimum and Maximum Allowance.
	s.	*s.*
Efficiency - - 1	10	12
2		11
3		10
Competency - 1	5	7
2		6
3		5
Probation - - 1	3	4
2		3
3		—
Permission - -	—	—

The difference of expenditure would be very trifling, and means would be afforded of offering some immediate reward to merit, without breaking down the standard of examination, which it is highly important to maintain for each class.

My Lords would instruct Her Majesty's Inspectors to have exclusive regard to all that is most practical in promoting teachers from grade to grade within each class.

I have the honor to be, &c.
(Signed) R. R. W. Lingen.

To the Secretary of the
Poor Law Board, Whitehall.

INSPECTORS' REPORTS.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools,* E. CARLETON TUFNELL, Esq., *on the* SCHOOLS OF PAROCHIAL UNIONS, *and also on the* REFUGES AND REFORMATORIES, *inspected by him in the* METROPOLITAN DISTRICT.

MY LORDS, March 1857.

District schools in London.

No addition to the teaching power or to the number of district schools in the Metropolitan District has been made during the past year. In fact rather a diminution has taken place, as, owing to an accidental fire in the South Metropolitan District Schools, which consumed nearly a third of the building, about 200 children had to be dismissed. The loss, however, will only be temporary, as an insurance covers the greater part, and the accommodation previously provided was so extensive that, with a little inconvenience, the school proceeds almost as before, with nearly 800 children; and in about five months, owing to the energetic efforts of the managers, the building will be restored in all its former spaciousness. The condition in which the majority of the pauper children enter these schools continues to show a lamentable deficiency in the means for supplying the blessings of education to the London children. In order to test this point, I have caused a table to be drawn up showing the mental state of 2,062 children who entered the eight largest pauper schools during the past year. This table I give below. All children of an infantile age, that is, below six and in some schools below seven, are excluded. The average age of those who enter these schools is nine years eight months, a period of life with these children at which it may be predicted that, if they have got no instruction hitherto, they will probably get little or none for the future. Owing to deficiencies of registry, the girls of one school, Stepney, are only set down for half the year, and in another, St. George's-in-the-East, they are wholly omitted. These omissions, however, do not affect the general accuracy of the proportions.

TABLE showing, out of 2,062 children, not infants, admitted into the eight largest Pauper Schools of London, during the year 1856, the numbers respectively who could not read, who could read a little, and read fairly.

Ages of children in schools.

It will be perceived from the above table that, of the 2,062 children, 1,358 were entirely uninstructed, and only 225 could read fairly. Or to give these numbers in per-centages, 65 per cent. were quite uneducated, and only 10 per cent. sufficiently educated to read fairly. If, as we might justly do, we include those who only read a little among the uneducated, 88 per cent. of the children aged from six or seven to fourteen, and averaging in age nine years and eight months, must be placed among the uninstructed. According to the report of my colleague, the Rev. F. C. Cook, Inspector of Church Schools in London, the per-centage of children in them above twelve years old is only 10·76. But the children of that age are almost invariably those of tradesmen and skilled artizans. The children of ordinary working men, as stated in the same report, very rarely remain till they are twelve years old, and in agricultural districts they are withdrawn before eleven. Hence, as the children received in the pauper schools are of course of the labouring class, and as it follows from the above table that 65 per cent. at least are utterly ignorant on entering school, though nearly ten years old, it is manifest that a considerable part of the London population grows up in complete ignorance. The pauper children form, as is well known, a very small proportion of the destitute children of London, and may be taken as fair specimens of the uneducated condition of the mass. Whatever efforts may have been made of late years to educate the population, they are still far beneath what the necessities of the case require.

Staff of teachers in three district schools.

I consider the three district schools at the head of the foregoing table as affording the best examples of education for this class of children, and I will give a brief description of the staff appointed to impart the instruction. There are thirteen

teachers male and female employed (exclusive of six engaged to instruct the infants), whose united salaries amount to 843*l.* per annum, or an average of 64*l.* 16*s.* 11*d.* to each teacher. Thirty-one pupil-teachers are appointed to assist in the instruction, who, as they are engaged at an age never under thirteen, and because they have shown some aptitude for teaching, and remain till eighteen or nineteen, are most efficient assistants in the schools. The industrial department is supplied with twenty-four teachers in the various trades of shoemaking, tailoring, baking, carpentry, garden-work, engineering, sewing, washing, and thus the whole of the clothes for the 2,500 inmates, stockings excepted, and the greater part of the milk and vegetables, are made or raised by the children. A chaplain in each school overlooks the religious training, and exercises a general superintendance.

Most persons will consider the department of industrial training as one of the most important for this class of poor children, and it is clear, from the number of instructors engaged in it, that no little attention has been bestowed on the industrial arrangements. Yet I am by no means satisfied that considerable improvements are not practicable in this important part of education. By the cultivation of 120 acres, the children supply most of the vegetables and milk required for their support. This garden cultivation certainly contributes to their health, but, in the neighbourhood of the Metropolis at least, it seems in no degree to assist them in obtaining situations. Numerous applications are made for bakers, sailors, shoemakers, carpenters, but very rarely any for agricultural boys. This out-door labour would fit them extremely well for emigration, but, unless any extensive scheme of sending them to the colonies be adopted, experience seems to show that, in the immediate neighbourhood of large cities, agriculture is not the best employment for children. Industrial training in these schools.

Again, I doubt the expediency of bringing up more boys to the tailoring trade than are requisite to make the clothes of the house, and even this number I would reduce by the introduction of the sewing machine. There is not a large demand for tailors; the wages offered are mostly extremely low; the hours of working painfully long; and the daily increased use of machinery in this business promises to reduce still lower the number of journeyman tailors. Tailoring.

Machines are yearly more and more superseding simple mechanical labour, and hence children instructed in the use of them would soon find employment. I should wish to see some both of the boys and girls instructed in the use of the sewing machine. The boys who are trained to manage the steam-engines used in the schools readily get engagements, and I sus- Use of machinery.

pect will shortly be found to be more in demand than regular farm boys for agricultural employers. I trust that employment in the brickfields will shortly be superseded by brick-making machinery. The neighbourhood of a brickfield is always a serious injury to a pauper school. It furnishes a large demand for children for about six months in the year, during which they earn high wages in a simple manual labour. At the end of that period they are turned off, thoroughly demoralized by the work. This high-priced casual employment seems equally demoralizing to the men, and it forms one of the numerous instances in which it seems obvious that the introduction of machinery would be of great and immediate benefit to the labouring classes.

Comparison between pauper district schools and elementary schools in general.

There is one test of the efficiency of the instruction in these large London schools, which proves, I think, conclusively that it is not inferior to what is given in any other of the elementary schools in the kingdom. It is well known that nearly all the good schools in England are supplied with pupil-teachers, who numbered by the last return 8,524. Every Christmas, those pupil-teachers who have passed their fifth year of apprenticeship usually try to obtain Queen's scholarships, and thus, the examination papers being everywhere the same, there is a competition among all the schools of England, as the success or failure of their respective pupil-teachers is some criterion of the excellence of the education in the schools where they have been brought up. The candidates may get first-class or second-class Queen's scholarships, or may wholly fail, the published lists classifying the successful competitors according to merit. Now, from the London pauper schools, eight pupil-teachers presented themselves at the last Christmas examination, every one of whom succeeded in gaining first-class Queen's scholarships, and also in being placed high in the classified list. If it is considered that these pupil-teachers receive from Government only one-half the amount that is paid to pupil-teachers in ordinary day schools, I think it will be apparent that the education given in these schools is, not only thoroughly efficient, but, *cheap* to the Committee of Privy Council on Education.

Failures in spelling, as noticed in Report of Civil Service Commission.

The subject of spelling may appear to be one of the lowest branches of instruction, yet it is surprising how ill it is taught to the higher and middling classes of society. My attention was specially turned to this point by reading the Report of the Civil Service Commissioners, which shows the result of examinations of candidates for the public service. Though many of the examinees offered themselves for examination in Latin, modern foreign languages, history, &c., "the great majority of rejections," say the Commissioners, "have been

occasioned, not by ignorance of these subjects, but, by inability to spell with ordinary accuracy. The failures, moreover, have not been errors in words of rare occurrence or technical character, but discreditable mistakes in those of everyday use." The report gives a list of the errors that were made, the great majority of which I should think discreditable to the first class in an ordinarily conducted pauper school. In order to put this to the proof, I took from the Commissioners' Report thirty of the hardest words which appear to have puzzled the candidates for Government situations, and desired the first class in each of two district schools to write them down from dictation. The result was that, out of seventy boys who were in the two classes, sixteen committed no error in the spelling; nineteen, one error; eleven, two errors; and only one boy committed as many as nine errors. Such an exercise in spelling is considerably more difficult than any put in the Civil Service examinations, yet it is clear that the attainments of these children, whose average ages were under twelve, were very superior in spelling to many of the Government candidates, who were from 17 to 40 years of age, and who had doubtless, for the most part, been educated in middle or upper class schools. The Civil Service Commissioners account for this general failure in spelling, by supposing that the candidates are not selected for their fitness, but to oblige friends. I am persuaded that this is not the main cause, but that it really lies much deeper, and that this defect in the education of so many respectable persons is owing to the circumstance, that, in the schools for the higher and middling classes, these elementary subjects are not taught by trained teachers, or by persons regularly initiated to the business, and therefore they are badly taught. I have no hesitation in stating (having lately had opportunities of making the comparison) that purely elementary subjects, such as reading, writing, arithmetic, spelling, the English language, and geography, are far better taught in well-conducted elementary and pauper schools than in the ordinary schools for the richer classes. In fact, the establishment of forty normal colleges in England, which train teachers solely for elementary schools for the poor, has had the effect which was observed to follow similar institutions many years ago in Holland, viz., that of causing the poorer classes to be better educated in ordinary subjects than the richer. There is one proof of this, which I venture to think will be considered of some weight. In private schools the instruction is chiefly given, not by the head of each establishment, but, by subordinate ushers and mistresses. Now let anybody inquire what salaries are paid to these subordinate teachers; I have given, in a previous page, the salaries

Teachers in elementary schools superior to subordinate ushers in higher class schools.

paid to thirteen male and female teachers in three pauper schools, and have shown that they amount to an average of 64*l.* 16*s.* 11*d.* per head, besides a liberal board and lodging. This is, I will venture to say, at least double what is commonly given to assistant-teachers in higher class schools. It is well known that it is by no means an uncommon circumstance for the teacher of an elementary school to earn 140*l.* per annum; consequently, as in the long run the highest payments will always attract the highest talents, it follows that schools for the rich are worse supplied with teachers than those for the poor. I will add one more proof of the inferiority of schools for the rich. It has frequently happened to me to meet with teachers in workhouses, who have subsequently been dismissed (sometimes in consequence of my report) owing to their incompetency; and also with cases of teachers guilty of immorality so gross that they have been dismissed at a moment's warning. In cases of this kind the useful power of the Poor Law Board prevents the re-appointment of such teachers to any pauper school, nor could they be recognized by the Committee of Privy Council. I have sometimes inquired what has become of them, and I have often learnt that they had obtained places as assistants in gentlemen's schools. Such teachers, though too bad for the poor, are not considered too bad to instruct the children of the upper classes. Of course, the remedy for this state of things is to do for the rich what has been done for the poor. The attempt has been made. An institution, called the "Royal College of Preceptors," was incorporated by Royal charter eight years ago, expressly to remedy the evil I have described. It was apparently ably designed for the purpose, and yet has turned out a failure. There were 12,000 upper class schools in England and Wales, according to the census of 1851, which must have contained at least double that number of teachers, and yet I learn from a public address of the Vice-president of the Royal College, delivered last June, that at that period only 520 teachers belonged to the college.

Agricultural employment as exemplified in North Surrey District School.

I will confine my observations on the agricultural employment in pauper schools to a statement of the experience of the North Surrey District School, as the results are in some respects remarkable, and throw, I think, some light on the sewage-question, as connected with the sanitary condition of such establishments. The following table shows a tolerably fair return for the year, as the clear profit is 99*l.* 3*s.* 6*d.*, and if, as is commonly the practice in agricultural establishments of this description, nothing had been charged for the rent and labour of the children, the profit for the year would have been 283*l.* 3*s.* 6*d.*

As the school, with all its officers, contains usually 800 souls, and all the washing is done on the premises, of course there was a large flow of liquid manure, which could not be conveniently carried away by any neighbouring drain. This was partly used in irrigating the land, and I will presently show what enormous crops followed its use, but I wish now especially to allude to the sanitary view of the matter. The school being situated on a gentle ascent, close to the Brighton railway, great part of the sewage flowed on to the railway, and created so great a nuisance that the managers of the school were threatened with an indictment. I have stated, in a former report, how completely this difficulty was met by the erection of a filtering apparatus, in which, by the aid of peat-charcoal and burnt clay, the sewage flowed away, after filtration, in the form of pure and inodorous water. By this method, the sanitary difficulty was effectually met and conquered, and the apparatus has now been successfully worked for five years. But the agricultural purposes to which sewage manure may be devoted is of almost equal importance, and, as some careful experiments were made for the purpose of testing its value, I proceed to detail them. The sewage, in its liquid state, was chiefly employed in irrigating land that had been sown with Italian rye-grass, and three quarters of an acre were set apart for the special purpose of closely observing the effects The result I give in the following examination of the agricul tural superintendent, Mr. Westwood:—

Q. What effect had the liquid manure on the Italian rye-grass?

A. In Novemher 1855, I sowed three quarters of an acre of Italian rye-grass. It was flooded during the winter with sewage, and on the 27th of April 1856 it was begun to be cut; from that day to the last day of October, we cut one cart-load of green food every day, weighing about a ton. The part of the ground that was cut was always flooded with liquid manure immediately after the grass had been carted away.

* The rent is charged at 80*l.*, and the labour includes a charge of 10*l.* per acre for the boys' labour.

Q. Then the produce amounted to the proportion of 235 tons of green food per acre?

A. Yes; the grass stood two feet six inches high. Sixteen head of dairy stock and one horse were fed on it during that time; the horse had two bushels of oats a week, and the cows a daily run of four hours on five acres of pasture, besides the Italian rye-grass, but nothing else was given them during that period.

The above account of produce seems incredibly large, but I was positively assured by more than one person of its correctness. Possibly the manure may have been more powerful than in cases of similar experiments elsewhere, owing to the quantity of soap used in the washing department,—and the constituents of soap are known to be powerful stimulants of vegetation. But the trials made with the solid sewage manure from the filter are perhaps still more important, and I think it right to mention these details, as elsewhere I have seen large schools placed in considerable difficulty from the same inconvenience that was so effectually met here. The filtering matter was always peat-charcoal and burnt clay. The details of management are described in the following evidence of Mr. Westwood:—

Q. What proportion of peat charcoal and clay ashes is used?

A. Four tons of clay ashes are mixed with a quarter of a ton of peat charcoal, and put on the filter; the produce is eight tons of manure, after the sewage has flowed through it a month, when the filter ceases to act.

Q. What effect had this solid manure on the crops?

A. Putting at the rate of two tons per acre on the land had a similar effect to an ordinary dressing of farm-yard manure of twenty tons per acre, the crops from these respective manures not being distinguishable. I tried them together for three seasons, and found the crops, after these two dressings, as nearly similar as could be.

Q. At what do you estimate the value of the solid sewage manure?

A. It has been valued at 10*s.* per ton, which is what I estimate to be its fair worth, according to the benefit it effected on the ground.

Q. Have you tried this manure in compsrison with guano?

A. Yes; at the same time I tried it against farm-yard dung, I tried it against guano, and found that 4cwt. of guano per acre produced the same effect as two tons of the sewage manure. I found that though so much smaller a quantity of guano produces the same effect as ten times the amount of sewage manure, and a hundred times the amount of farm-yard manure, that the crops subsequent to the first crop are much superior when sewage manure or farm manure had been used than when guano had been applied. The crops from guano exhaust the ground.

Q. What is the cost of the peat charcoal?

A. About 3*l.* 3*s.* per ton; the clay would cost about 3*s.* per ton to burn, when it is burnt on the spot.

Q. Then, supposing the filtering tank to be filled with four tons of burnt clay and a quarter of a ton of peat charcoal, the cost would be 1*l.* 8*s.* 9*d.*, and this would produce eight tons of manure worth 4*l.*?

A. Yes; that is a fair approximation.

Q. To what crops has the manure been applied?

A. Swedes, mangel wurzel, and potatoes. The swedes and mangel wurzel produced 25 tons per acre; I do not know the quantity of potatoes. Wheat in each case was sown after the roots, and the produce has generally been

five quarters an acre, except where guano was used, when the crop was considerably lighter, both in straw and corn. The yield of wheat was about equal from the ground where the sewage manure and farm manure had been used, but much more straw was produced where farm manure had been used. The soil here is mostly stiff clay.

Now, though I believe it to be utterly impossible to make any industrial school self-supporting by its industry, I think a far nearer approach to that desirable end may be made than is usually arrived at, by pursuing some such plan as I have detailed above. The conditions are that all the manure of the establishment be applied to the soil, including a flow from the washing-tubs. I believe it, however, to be a mistake to grow grain crops by youthful labour, and that much more profit would be made by restricting the cultivation to vegetables, —especially if a market is at hand. In many workhouses, where the governor understands gardening, I have often seen it proved by the experience of several years, that a single acre of land, duly manured, will produce as much ordinary vegetables as 100 persons can consume in a year. The quantity, too, of vegetables allowed to each workhouse inmate is generally considerably more than is consumed by other persons. These large amounts of produce, however, can only arise when every particle of manure from the house is put on the land, and the vegetables are such as potatoes, cabbages, parsnips, and not the finer sorts, such as asparagus, sea-kale, &c. The utility of using liquid manure has been doubted, the possibility of readily deodorizing it has been denied, and also the value of the matter precipitated from it. It appears to me that the experiments above described decide all the questions in the affirmative, and, as the best mode of managing industrial schools is a point of no small importance, I trust my description of what has been done in the North Surrey District School will not be thought to be irrelevant.

Decimal coinage.

As the subject of decimal coinage continues to engage public attention, I should wish to say some few words on the subject, with reference to schools. I have stated in a former report that there is not the smallest difficulty in introducing the subject into ordinary schools, and in fact, after the explanation of the principle, the working is so extremely easy, and the getting rid of the shillings, pence, and farthings table is found to be so great a boon, that the change, once understood, is accepted with the utmost pleasure and satisfaction. As, should the Legislature resolve on the change, there is no better plan of spreading a knowledge of it than through the common elementary schools, the ease with which, as experience shows, it may be introduced and comprehended in ordinary schools, is a

matter of very great importance. It ought to remove the apprehension, that is sometimes felt, that there is any obstacle to the immediate introduction of the system of decimal coinage, in the alleged incapacity of the public to understand it. I have found, from repeated trials, that a boy ten years old may be made perfectly to comprehend and work sums in decimal coinage, after half an hour's instruction, and even with greater facility and correctness than on the pounds, shillings, and pence system, which he had previously learnt for years. Hence, it seems to me absurd to suppose that there can be any national difficulty in understanding what may be so quickly taught to a child. But the introduction of the system would be much facilitated if the Government were at once to announce what decimal system they will fix upon, even though the actual change is not immediately made, whether they fix upon what goes by the name of the *pound and mil* system or the tenpenny, or any of the other systems that have been put forward. It is true that there is a great difficulty in teaching the general theory of decimals, but it is far easier to teach any particular system of decimal coinage, which, in fact, does not require the use of the word *decimal* at all. Now, as of course, in preparing for the change, much obtuseness, even amongst teachers, must be encountered, therefore any plan that allows for that obtuseness will essentially smooth the way. If Government would declare that they have determined to introduce ultimately the pound and mil system, all difficulty would be removed. Every school and almost everybody would at once set itself to learn the system, and long before the mechanical arrangements could be completed, nearly everybody would understand it. The word *decimal*, like *metaphysics*, is of evil omen to many people, and is imagined to refer to some very recondite subject. Our arithmetical books are partly blameable for this, as, for some unexplained reason, the subject of decimals usually comes after the rules for insurance, compound interest, double fellowship, vulgar fractions, &c., which are all of far greater abstruseness and difficulty. As, in most schools, the majority of pupils never get as far as these rules, the subject of decimals, which in fact is infinitely easier than any of them, is never touched upon. And hence, when in the last Christmas examinations for certificates a few questions on decimal coinage were inserted, they were wholly passed by every student in some of the normal colleges, though the questions were as easy as simple multiplication; and thus much failure and disappointment ensued. As, according to Professor de Morgan, the introduction of the decimal system "would reduce arithmetical teaching of accounts to one-fourth in point of time,

and to one-twentieth in point of complexity;" and as, according to Mr. Thomson Hankey, M.P., late Governor of the Bank of England, "the mere substitution of 100lbs. for the cwt., and the decimal scale of weights, would save the labour of 200 clerks in the customs alone, and salaries to the amount of, at least, 10,000*l.* a year;" and as it is equally certain that the change would be joyfully accepted in every school in the kingdom, I venture to hope that an alteration, in which the interests of economy, of convenience, and education are so much concerned, will not long be withheld.

Reformatories and ragged schools, and other institutions for vagrant classes.

The minute of the Committee of Council on Education of 2 June 1856, which so liberally assists schools for criminal and abandoned children, has caused me to visit many establishments for these classes of children. Practically, the workhouse schools of the London parishes are mostly filled with the same description of abandoned children, and thus, in visiting refuges and reformatories under the Minute of 2 June, I find precisely the same characteristics among the inmates, and the same difficulties and evils with which I am so familiar in respect to pauper children. The institutions now in operation in London, for civilizing and educating these destitute children, are very numerous, and it may be useful to give a short epitome of them. In the first rank I place the district pauper schools, or what are equivalent to them, supported by the metropolitan unions or parishes. These usually contain about 6,000 children, and, as they are maintained with the utmost liberality by the elected guardians, perhaps there are no schools in England more extensively useful. There are also schools for about 3,000 children in workhouses, under the same roof with adult paupers. There are many of them fairly conducted, but anybody who has had experience of what adult workhouse paupers are must feel the same want of confidence that I do that children brought up under the same roof with them can be morally educated. Private benevolence has founded 150 ragged school institutions, which comprise 128 Sunday schools, with 16,937 scholars in attendance; 98 day schools, with 13,057 scholars in attendance; 117 evening schools, with 8,085 scholars in attendance; and 84 industrial classes, with 3,224 scholars in attendance. Lastly, there is the important Act of 17 & 18 Vict., c. 169, for the maintenance of county industrial schools in Middlesex. Under this Act, the Middlesex magistrates have purchased land, and are now about erecting schools for 800 children. The provisions of this Act seem to be capable of almost exterminating vagrancy among the juvenile population of London; as any child from the age of 7 to 14, if summarily or otherwise convicted, may be sent to these reformatory schools, and forcibly detained there from one to three

years. The treatment of those children who are simply destitute must be essentially different from those who are criminal, and I believe that the distinction to be observed in training these two classes is now pretty generally admitted. The distinction exists in this, that, as wide experience shows, simply destitute children may be educated in masses, and congregated in large schools; while children thoroughly abandoned and vicious can only be satisfactorily educated, on the family system, in small schools. This principle is now so well understood that I find it carried into full operation in nearly all the refuges and reformatories which I have visited. There is one admirably designed "Society for the Rescue of Young Women and Children," that proceeds systematically in founding small reformatory schools in different parts of London. Its method is to select an ordinary small house, and to place in it a limited number, not exceeding that of a good-sized family, under the care of a man and his wife, whose object will be to gain the affection of those placed under their charge, and, by persevering kindness and family discipline, to endeavour to be instrumental in their reformation. I have visited four of the establishments thus set up, and in each case the whole arrangements appear to me extremely well designed to infuse new hearts and Christian principles into the unhappy girls who have become inmates. The building, in each case, differs in nothing from any other house in the row, and contains usually from fifteen to twenty girls presided over by a matron, who is responsible for everything. I believe that much of the success depends upon thus concentrating responsibility on a single head; and as, in every case, I made minute inquiries of what becomes of the inmates when they leave, I was presented with most satisfactory proofs that a real reformation had in nearly every case been brought about. At first sight it may appear that this plan of founding small separate establishments would involve a great expense. If, however, it is more successful than any other, and I believe it to be so, in reforming the inmates, the increased expense is a very secondary consideration. The advantage to the general community in turning a single criminal into an honest person, taking even the low money view of the case, cannot be less than 100*l.* But, on looking into and comparing the accounts of large and small establishments, I cannot find that the former have really any advantage in the point of cost. Any small house will answer on the "family home" system, and thus the vast expense which always attends the building a school, or adapting old buildings, is saved. The expense is of course represented by so much rent, but this I do not find, on comparison, to exceed the interest of the money laid out on ordinary school buildings where the children are lodged. Thus

the rent paid for the "Hampstead Family Home"—a model of such establishments—which contains twenty inmates, presided over by a matron, is 46*l.* per annum, or an average of 2*l.* 6*s.* per head. I know several large schools containing hundreds of children where the interest on the capital laid out on the buildings would amount to 2*l.* 10*s.* per head, reckoning the interest as low as 5 per cent. Nor does the superintendence cost more when the number of twenty inmates is not exceeded, as in that case it is found that one matron at a salary of 25*l.* is sufficient to manage the whole. I was previously familiar with the results of establishing small separate schools for workhouse children, entirely separated from adults, and the opinion I had formed regarding them is exactly confirmed by what I have observed in these small homes for criminal or abandoned children. In all such establishments, if the head is well selected, education in its highest sense may be imparted. The inmates may be trained in morals or behaviour, and in industry, to a very high point; in fact they may be made good Christians and good workers. These results may seem to include all that could be wished, but I cannot help thinking that the good seed thus sown would be more firmly rooted, and less liable to decay in future years, if a little more intellectual instruction were imparted. The head of such an establishment, by his or her example and conversation and manners, *educates* highly, but seems rarely to possess in addition the art of a good teacher, and hence I would suggest whether an improvement might not ensue by the engagement of a trained teacher, to come daily for a couple of hours, to instruct the inmates in ordinary school subjects. The expense would not be great; the superior, often overworked, would be somewhat relieved; and what seems to me a small defect in these institutions would be remedied. Lest it should be supposed that I am advocating any extravagant scheme of instruction, I will briefly explain to what extent I would have the teaching to proceed in such schools. I need not insist on the necessity of a well grounded knowledge of the doctrines of Christianity, as there can be no controversy on such a point. In arithmetic, the pupils should be able to make up accounts and cast up shop bills with facility. In writing, they should be able to write a small hand readily, and to express themselves without difficulty, and especially they should be able to write letters. The utility of the requirement in arithmetic will be evident, but the power of writing with ease is of still greater importance. Children of this low origin have rarely any friends in their own rank, or among their relations, or such as they have ought to be avoided. The habit of corresponding with a respectable person, like the

teacher of the school where they have been educated, is found to be one of the best supports of good conduct, and the strongest preservative against falling into evil courses. I have long been aware of this effect of letter writing in the case of pauper children, who are generally friendless. They are ashamed to write if they have not a good report to make of themselves; and they feel it to be the strongest encouragement in well-doing to write to and receive letters from anyone in the upper ranks of life. In visiting both pauper schools and reformatories, I have always been in the habit of asking to peruse the letters, if any, sent to their teachers by those who have left the establishment. I am satisfied that it is possible to judge of the excellence of a school more readily by such letters than in any other way. We see in them, not only what the school presents, which may be deceptive, but, how far it answers the real purposes of a school at all; how far the instruction therein imparted has taken root in the heart, and is producing fruits. Among all the benefits of cheap postage, I know none more valuable than the power that it gives to a philanthropist of continuing his care and watchfulness over those who are separated from him by space. The practice of writing English with facility ought to be enforced in every poor school and reformatory. In refuges for girls the almost invariable practice is to prepare them for household service; but, where boys are admitted, the question of what work they shall be employed upon is not of so easy a solution. On perusing a great number of reports from different London institutions, I find that those who have obviously paid the deepest attention to the subject have come to the same conclusion to which I had previously arrived from inspecting the large London pauper schools. This conclusion is well expressed in the following resolution passed at the last public meeting of the "Belvedere Crescent Reformatory,"—an establishment worthy of all praise:—"That it is of less consequence to prepare the inmates of a town reformatory, for any special occupation which they are hereafter to pursue, than to train them to habits of industry upon some uniform system which shall be most profitable to the institution." I had long ago observed that the children from pauper schools did not usually betake themselves to the occupations in which they had been specially instructed, and that, in industry as in intellectual education, the right policy, is not to educate, for special pursuits, but, to give such a development of the various powers of mind and body as shall enable a youth to turn his talents to account in whatever situation he may be placed. Mr. M. D. Hill and Mr. R. Hall, the Recorders of Birmingham and Doncaster, than whom none can be better qualified to give opinions on this matter, both concur in this view; the

former remarking,—"during a pretty long experience of life, it has often occurred to me to observe how quickly one who brings to the contest a general development of his powers overcomes an antagonist greatly superior to him at first in his acquaintance and familiarity with the particular subject of their conflict." In agricultural refuges, situated in the country, and filled with country youths, possibly it may be advantageous to bring up the inmates as husbandmen,—especially as such a training admirably fits them for the colonies; but for town youths, unless they are intended for a colonial life, I do not think that agricultural employment is best fitted. I had anticipated, when the Minute of 2 June was first brought into operation, that some ordinary parish schools might be turned into feeding schools, with the view of participating in the large pecuniary benefits held out under that Minute. I am bound to say that, hitherto, I have not visited any establishment under that Minute which does not entirely consist of the criminal or abandoned children who are alone contemplated by it. The money distributed under the Minute is so large that I think it would be unfair to charge the public funds as heavily in favour of any other than this particular class of children. But, as I believe that most of the children who are benefited by it are saved from a life of crime, this peculiar disbursement of the educational grant fulfils the requirements of humanity and as well as of economy.

I have the honor to be, &c.

E. Carleton Tufnell.

To the Right Honorable
The Lords of the Committee of Council on Education.

Tabulated Reports, by Her Majesty's Inspector of Schools, E. CARLETON TUFNELL, Esq., *on the Parochial Union Schools inspected by him in the Metropolitan District, in the Year* 1856.

Name of Union.	Boys.	Girls.	General Observations on Discipline, Instruction, &c.
MIDDLESEX.			
Bethnal Green -	117	144	The great fluctuations in these schools, and the changes of teachers, have been a considerable drawback to any great advance; but the teachers at present engaged are skilful and diligent.
Brentford - -	65	72	The girls' school is, as at former inspections, in excellent order, and passed a very creditable examination. The boys' school is in a far less advanced state, having been injured by repeated changes of masters.
Clerkenwell - -	41	50	These schools are now well managed in all respects, and passed an examination very creditable to their teachers.
Fulham - - -	62	50	Both boys' and girls' schools are fairly taught, and the boys' school especially is much improved since my previous inspection.
Hackney - -	61	63	Both boys' and girls' schools are fairly conducted, but the great fluctuation of children render any material progress difficult.
Edmonton - -	78	63	These schools, as at former inspections, deserve commendation for their general management, and the industrial instruction is particularly well attended to.
Hendon - - -	9	16	These schools continue to be fairly taught and managed in all respects.
Holborn - - -	73	88	The intellectual instruction in these schools is very fairly imparted, but I cannot approve of the industrial training of the boys.
Islington - -	66	36	These lately erected schools, which, besides boys and girls, contain forty-five infants, are furnished with every accommodation and appliance for an efficient educational establishment. The boys especially passed a very satisfactory examination.
Paddington - -	54	47	These schools have only lately been opened, and the children withdrawn from the parish school, whither they had previously been sent. They were, at my inspection, in a very backward state.
Staines - - -	22	27	These schools are very creditably conducted, but the girls' school has been much deteriorated in consequence of an epidemic disease among them.
Stepney - - -	232	95	These schools, especially in the boys' department, are, as formerly, extremely well managed in all respects. There is a separate school of 120 infants.
St. Luke's - -	67	40	A considerable improvement is in progress in these schools, more especially in the boys' department.
St. Giles' and St. George's, Bloomsbury.	64	45	The schools of these united parishes, which, in addition to the boys and girls, contain a well-ordered establishment of sixty infants situated in the country, are very fairly managed in all respects.
Strand - - -	79	65	These schools are very fairly managed, and the children passed an examination creditable to their teachers, more especially the girls' school.
St. Leonard's, Shoreditch.	105	98	These are magnificent schools, lately erected at Brentwood, in Essex, containing every accommodation necessary for a first-rate industrial establishment. It contains a separate school of fifty-four infants, and four pupil-teachers being now appointed, bids fair to be successfully conducted.

Name of Union.	Boys.	Girls.	General Observations on Discipline, Instruction, &c.
SURREY.			
Bermondsey	—	—	The children of this union are sent to the South Metropolitan District School.
Camberwell	—	—	The children of this union are sent to the South Metropolitan District School.
Chertsey	48	45	The boys' school, as at former inspections, is deserving of much praise for the efficiency of the instruction. The girls' school is less advanced.
Dorking	36	33	This school, conducted on the mixed principle, is fairly taught, and the industrial training is well attended to.
Epsom	20	37	These schools are very fairly managed in all respects, and the industrial training of the girls, especially, is extremely well attended to.
Godstone	18	12	The boys passed a fair examination. The girls are much less advanced, but their industrial training is very efficient.
Guildford	30	46	The boys' school shows considerable improvement since last year, and is in better order than at any previous inspection. The girls' school is, as before, creditably conducted.
Lambeth	196	136	These schools are progressing in improvement, which will now proceed more rapidly, owing to the appointment of pupil-teachers. There is a separate school of 67 infants in the establishment.
St. Olave's	26	46	These schools will probably be discontinued, the union forming part of the South Metropolitan School district.
Reigate	40	34	The boys passed an examination that reflected much credit on the master, who also efficiently manages their industrial education. The girls passed a fair examination, and the school is altogether fairly managed.
Central London	360	230	This school, which also contains a separate department of 260 infants, is as well managed as formerly.
North Surrey	279	215	This school, which also contains a separate department of 142 infants, is well managed and improved since last year.
South Metropolitan	298	302	This school, which also contains a separate department of 110 infants, lately much increased in numbers, though the latest founded of district schools, is not inferior in management to any.
SUSSEX.			
Battle	23	17	The children in these schools are fairly taught, more particularly the girls, who are skilfully and diligently trained by the mistress.
Brighton	81	40	These schools, which also comprise a separate school of 48 infants, are well managed, and passed a good examination, more especially the boys and infants.
Chailey	13	6	The children in this establishment are morally and industrially well educated.
Chichester	17	-	The children are fairly instructed, but there is a want of sufficient industrial employment. The girls are not under inspection.
Cuckfield	24	21	The children in these schools are moderately well instructed, but their industrial training is very well managed.

Name of Union.	Boys.	Girls.	General Observations on Discipline, Instruction, &c.
Eastbourne - -	26	26	The girls' school is remarkably well taught and managed, and showed skill and diligence on the part of the mistress. The boys are well instructed in arithmetic, but moderately in other matters.
East Grimstead -	37	21	The boys are well taught, and passed an examination showing diligence and skill in the master. The girls are also fairly taught, and well trained industrially.
Hailsham - -	20	25	The girls are well taught and managed, and passed an examination reflecting credit on the mistress. The boys are moderately well taught, but their industrial training is well attended to.
Hastings - -	20	28	These schools are well managed and instructed, and the children passed a satisfactory examination.
Horsham - -	25	12	These schools are fairly managed, and the boys' training in industry is especially commendable.
Lewes - - -	16	19	The children in these schools are well managed, and are rapidly taken into service, where they appear to give satisfaction, which is a good test of the efficiency of their training.
Midhurst - -	17	33	These schools are in good order, and showed on examination proofs of efficient instruction.
Newhaven - -	6	–	This small school is carefully and intelligently managed by a schoolmistress.
Rye - - -	30	14	The children in both schools are fairly taught, but the frequent changes of teachers have materially injured the boys' school.
Steyning - -	15	18	These schools are fairly conducted, and the boys are improved since my last inspection.
Thakeham - -	9	3	These small schools are fairly managed, and the children are well instructed in industry.
Ticehurst - -	13	22	The children in these schools are very moderately taught, and I can record no favourable opinion of their progress.
Uckfield - -	17	11	The children in these schools are moderately well instructed in the ordinary subjects.
Westbourne - -	6	12	This school, conducted on the mixed principle, is in good order, and the examination proved diligence and skill on the part of the mistress.
West Firle - -	6	7	The children in these small schools appear fairly educated and industrially trained.
West Hampnett -	26	30	Both schools passed a good examination, and their general management does credit to their respective teachers.
KENT.			
Ashford, East -	24	36	The children in these schools are moderately instructed, the boys passing a better examination than the girls, except in religious knowledge.
Ashford, West -	13	12	The children are fairly instructed in these small schools, considering their tender ages.
Aylesford, North -	45	36	The children in these schools are moderately well taught, the instruction and discipline having been much interfered with by the alterations in progress.
Bleam - - -	10	–	Considerable improvements are in progress in this house, which include the erection of much-improved schoolrooms, during the building of which the schools are necessarily much hindered.
Bridge - - -	14	19	The children are moderately well instructed in all ordinary subjects.

Name of Union.	Boys.	Girls.	General Observations on Discipline, Instruction, &c.
Bromley - - -	23	25	These schools are in better order, and present fairer prospects of improvement than I have observed at previous inspections.
Canterbury - -	10	19	The children in these schools are well taught in all respects, and passed an examination very creditable to their respective teachers.
Cranbrook - -	19	27	These schools are considerably improved since my last inspection, and passed a satisfactory examination.
Dartford - -	22	36	The boys passed a very fair examination, which showed diligent attention in the master. The girls are much less advanced, and are deficient in spelling and arithmetic.
Dover - - -	39	39	The boys are intelligently taught by the present master. The girls are very moderately instructed.
Eastry - - -	24	29	The boys are well instructed, and passed an examination very creditable to their teachers. The girls are moderately well taught.
Elham - - -	26	36	The children in these schools are moderately well instructed, the boys being better taught than the girls.
Faversham - -	29	40	Both boys' and girls' schools are fairly taught, and in good order.
Gravesend - -	20	30	These schools are creditably conducted, the children passing a fair examination.
Hollingbourne -	27	31	The children in these schools are very fairly taught and the boys especially passed a very satisfactory examination.
Maidstone - -	51	60	The girls' school, as before, was in good order, and passed a creditable examination. The boys' school is improving under the present teacher, but it has suffered from three changes of teachers in a year.
Malling - - -	31	54	The children in this house are moderately well taught.
Medway - - -	42	46	The children in these schools are very fairly taught, and passed a fair examination.
Milton - - -	22	14	The children in these schools are moderately well taught, but they appear readily to get into situations, a proof that their morals are attended to.
Sevenoaks - -	48	50	The children in both schools are very fairly taught, and improvement is manifest since my previous inspection.
Sheppy - - -	24	20	These schools are well conducted in all respects, and the boys especially passed an examination very creditable to their teacher.
St. George the Martyr's.	119	98	The boys' school is well conducted and taught. The girls' school passed a fair examination. In both schools the industrial training is well attended to.
Tenterden - -	29	26	Both boys and girls passed a creditable examination, which showed skill and diligence on the part of their respective teachers.
Thanet - - -	48	27	These schools, which also contain a separate department of thirty infants, are very fairly managed, more especially the industrial training of the boys.
Tunbridge - -	53	49	These schools did not pass a satisfactory examination, a result which may be partly accounted for by a continued illness among the girls.
Margate Metropolitan Establishment for Children.	35	-	This establishment is solely for sick children, who are as efficiently instructed as their painful circumstances admit.

Name of Union.	Boys.	Girls.	General Observations on Discipline, Instruction, &c.
ESSEX.			
Billericay - -	24	33	The children in these schools have been fairly taught, more especially the boys, who passed an examination highly creditable to their teacher.
Chelmsford - -	52	55	The girls are moderately well instructed; the boys are very fairly taught, and passed a fair examination.
Dunmow - -	33	33	The teachers in these schools are newly appointed, and I expect considerable improvement in both boys' and girls' departments at my next inspection.
Braintree - -	36	30	Both schools are considerably improved since my last inspection, and the children passed a creditable examination.
Maldon - - -	27	57	The girls in these schools are moderately well taught. The boys passed a very fair examination.
Ongar - - -	16	34	The children are fairly taught, on the mixed principle, by a mistress, and the industrial training is remarkably well managed.
Orsett - - -	19	26	The children in these schools are fairly taught, and the industrial training is well managed.
Rochford - -	48	47	These schools are considerably improved since last year, which advance is especially noteworthy in the boys' school.
Romford - -	35	35	These schools are fairly taught and managed, but they show the defect of affording no industrial training for the boys.
Westham - -	45	77	The children in these schools are moderately well instructed, their progress having been impeded by illness.
Witham - -	31	13	The children in both departments are skilfully instructed, and passed a creditable examination.
St. George's in the East.	134	126	These schools are in good order, and in course of rapid improvement. There is also in the building a separate school of 85 infants, well managed.
Whitechapel - -	168	163	These large schools are in good order, and very fairly managed in all respects. There is also in a building a separate school of 95 infants, very moderately managed.
HERTFORDSHIRE.			
Bishop's Stortford	39	62	The boys' school is very fairly instructed and managed in all respects. The girls' school is much less advanced.
St. Alban's - -	22	23	The children in these schools showed a fair amount of knowledge, but injury has been sustained by frequent changes of teachers. They promise better for the future.
Barnet - - -	18	25	This is a mixed school, conducted by a mistress, and, as at former examinations, the children passed an examination creditable to their teacher.
Hemel Hempstead -	11	8	The children are clean and orderly, and moderately well taught.
Hertford - -	10	18	The children in these small schools are moderately well instructed.
Ware - - -	16	16	These schools are fairly managed, and the girls especially showed in their examination marks of careful attention on the part of the mistress.
Watford - -	25	51	These schools are both very fairly conducted, and passed an examination creditable to their respective teachers.

Name of Union.	Boys.	Girls.	General Observations on Discipline, Instruction, &c.
BUCKS			
Amersham - -	28	45	These schools show improvement since my last inspection, more especially in the boys' department, where the children are well taught, both intellectually and industrially.
Aylesbury - -	29	18	Both schools are very fairly instructed, and the boys are improved under the present master.
Eton - - -	26	33	The boys in this school are extremely well taught, and passed a very creditable examination. The girls are fairly taught.
Newport Pagnel -	14	31	The children in these schools are very moderately taught.

REFUGES AND REFORMATORIES.

Chelsea School of Discipline.	—	45	This, the oldest institution of the sort in London, is extremely well managed, and appears fitted with every appliance necessary to reform the unhappy girls who become inmates of it, and, as the result shows, with remarkable success.
Westminster, Old Pye Street Industrial School.	27	—	This is an industrial establishment for boys, who attend ragged schools. They are only kept an hour a day at lessons, and for seven hours they are assiduously employed in making paper bags and printing. They are fed, but not lodged, in the building. It presents a pleasing example of successful industry, and must be of inestimable advantage to the poor outcasts who are received in it.
Dalston Refuge for the Destitute.	—	87	An admirable institution for criminal girls. The object is to recover girls who have fallen into vicious habits and been sent to prison, and to teach them industrious pursuits. The receipts last year for washing alone, which is taken in, were 1,536*l.* 4*s.* 7*d.* The arrangements for forming domestic servants appear well calculated for the purpose in view.
Redhill Reformatory.	275	—	This juvenile reformatory, the largest and best known in England, is filled with criminal boys, divided into communities, according to the plan adopted at Mettray. A farm of 233 acres is cultivated by the youths, and the trades of tailor, shoemaker, carpenter, blacksmith, brickmaker, sawyer, most efficiently taught. The whole is under the superintendance of one head, and is throughout managed with no ordinary skill and intelligence.
Lacre Street Home for Female Children.	—	40	This is a well managed institution for female children who have been dishonest, imprisoned, or in a class of life where they would be criminal or degraded were it not for their reception into this benevolent asylum which appears managed with great skill and kindness
Cobourg Row School for the Destitute.	—	47	Only fourteen girls are boarded and lodged in this establishment, which is supplied by recommendations from the City Mission and Rescue Society. They are all taught industry as well as ordinary school subjects. A school of seventy-eight infants is also maintained on the premises, which are of a very poor and inconvenient description.

Name of Union.	Boys.	Girls.	General Observations on Discipline, Instruction, &c.
Dorset Square, Hill Street Female Refuge.	—	35	This is a well managed refuge for abandoned girls, who are well initiated in domestic work. It includes a home for cripples, the only establishment, I believe, in London where they are received. The articles made for sale are particularly beautiful and ingenious, such as mats, baskets, bags, &c. There is also, under the same roof, an infant nursery, where, at the expense of 3*d.* a day, a mother, engaged all day at work, may leave her baby, confident that it will be well fed and cared for.
Grotto Passage Ragged Industrial School.	16	85	This establishment, besides the boys lodged and the eighty-five girls, comprises a school of fifty day boys and fifty-five infants. Mats, hassocks, and other similar articles are extremely well made by boys, who were shortly before thieves or entirely abandoned in the streets. This useful institution is a daily source of comfort and instruction to more than 200 of the lowest caste of children.
Hampstead Family Home.	—	20	All these four establishments are supported by a "Society for the Rescue of Young Women and Children," on the principle that a family home not exceeding that of a good sized family, is the best method of reforming and training these abandoned girls. Everything relating to the moral and industrial treatment of the inmates seems admirably arranged, and judging from the proofs shown me of the reformation worked in those sent out to places, the objects of the society seem completely obtained. A matron has the sole responsibility of each home, and on this singleness of responsibility I am persuaded much of the success depends. The intellectual instruction (a point of undoubted minor importance to morals and industry) might, as it appears to me, be further developed.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools*, JOSHUA RUDDOCK, Esq., *on the* PAROCHIAL UNION SCHOOLS *inspected by him in the* SOUTH-WESTERN DISTRICT.

MY LORDS, March 1857.

THE indulgence so kindly conceded to me last year has necessarily interrupted the collection of the statistics which I usually embody in my annual report, although, in consequence of the valuable assistance of my colleagues, Mr. Bowyer and Mr. Symons, the district itself has not suffered from my inability to traverse the whole of it; the latter gentleman undertaking Devonshire and Cornwall at an early period of the year, and the former undertaking Oxfordshire, and a few of its neighbouring unions in Buckinghamshire and Berkshire, later in the season. By this means, every school in my district has been visited, and the reports thereon have been sent into the Committee of Council before the close of the parochial year, and, although the statistics are necessarily deficient, yet I am perfectly acquainted with the condition of the district. Inspection of district.

In very many respects I have to congratulate your Lordships and myself upon the improvement which has taken place in the condition of the schools generally, more especially within the last eighteen months; and, if I compare their present state with that I first described ten years ago, I have every reason to be thankful that my labours have not been in vain. I allude more particularly to the improvements of the last eighteen months. These are attributable almost entirely to the recognition that your Lordships have been able to give to industrial instructors, as distinct from the schoolmaster and schoolmistress, by the repayment of the whole or portion of their salaries. The majority of guardians of an agricultural district like mine have that special knowledge which enables them to take an interest in the branch of education which your Lordships' grants have so considerably extended; that interest, once excited, has not died away upon the field on which it was cultivated, but manifests itself in greater care for the future destination of the children. To this latter point I will return at another portion of my report, but will now very briefly state the effect of the resolution authorizing the repayment of industrial salaries. In very many cases, land, to an extent varying from one to twelve acres, has been rented for the Improvement in condition of schools; caused by payment of salaries of industrial instructors. Instruction of boys in industrial occupation and trades.

especial instruction of the children, and agricultural superintendents engaged. In other branches, pauper workmen have been removed from the shops, and the boys have been employed under a respectable paid trade-master, instead of being dependent upon the casual instruction of some pauper who might happen to know the trade.

Industrial instruction of girls.

The girls have been instructed in washing and ironing in many more workhouses than has hitherto been the case, and in the majority of them under a respectable paid laundress; in some cases, mixed schools have been formed under a master, and sewing mistresses engaged. This I consider a most valuable improvement, and the only way to procure efficient training for the children in small unions, so long as the pernicious system of repaying the salaries of the teachers according to the average annual attendance is permitted to exist. I have in previous reports remarked upon the good success of mixed schools taught upon this system.

Washhouses.

I will here say a few words upon the erection of washhouses, which has been impeded by an erroneous estimate of their expense. The object in view in having a girls' washhouse is more to fit them for domestic service than to get a certain amount of work done; in order so to fit them, it is evident that the means and appliances should approximate as closely as possible to those which they will have to use when they are placed out to service; consequently all the expensive array of water laid on, brass taps, &c., are quite unnecessary, and only defeat the intended purpose. A copper and a few loose tubs are all that is necessary, the principle being that the girls should be accustomed to use those implements alone which they will find given to them when at service. The matron of an important union in the west of England, when it was determined to establish a washhouse for the girls, requested, that instead of tubs, she should be furnished with the large brown pans which are in common use in that part of the country; it was objected immediately that the children would break them; "perhaps so" was the reply, "but is it not better that a few should be broken here, and the children eventually taught how to handle them, than that they should break them when out at service, and lose their places in consequence?"

Changes amongst teachers.

From the 1st of January to the 31st of December, ninety-seven teachers have been changed, viz.:—47 masters, 50 mistresses, total 97. This exceeds the amount in previous years; but, as a greater number of industrial instructors have been appointed, it tallies with the statement made in my report for 1850, being two-fifths of the whole.

The number of children under instruction remains nearly the same as it was last year, being about 9,000; and I will again reiterate the important fact that they form one half of the total number of workhouse inmates. I call attention to this fact, because, generally speaking, so little time is devoted by boards of guardians to the administration of their schools, and I have had many instances where the personal interest of even one guardian has led to the greatest improvement. If, in every board of guardians, one or two members would take an interest in the progress of the children in that branch of industrial education with which they themselves are familiar, it would lead to similar satisfactory results; this would be more especially the case in district schools, if members of the governing board were elected for the purpose of carrying out a sound system of industrial education. At the present time, when so much is being attempted with the intent of furthering the social improvement of the destitute and so-called dangerous classes, any sound practical scheme which has for its object the amelioration of the condition of our pauper population, both intellectually and industrially, must eventually tend to a diminution of poverty and crime; therefore, I would suggest that many gentlemen, who are now strongly interested in the reformatory and ragged school movement, might find valuable information, and would afford valuable assistance, by looking into the present condition of our workhouse schools, and promoting, where expedient, the formation of district schools.

Number of children under instruction.

Expediency of forcing district schools.

In a former paragraph I have alluded to the success that may be attributed, not only to improved industrial training, but also, and in no slight degree, to greater care being taken as to the future destination of the children. In the earlier portion of my career as an Inspector, the most common objection raised to pauper education was, that, the children for the most part did not keep their places, but returned to the house. It was not that they were dishonest, but they were unfit for the situation. A series of trials of this description has a depressing influence on a child's mind as to its future ability to earn its own living. It was alleged that they were over-educated, mis-educated, or of so bad a parentage that nothing good could be expected from them. I have taken some personal interest in investigating the causes of the return of many children to the workhouse. In almost every case it was attributable to their unfitness for the situation, but that unfitness did not proceed from any lack of intention to perform the duties incidental to their respective situations, but proceeded from their ignorance of the occu-

Importance of industrial training.

pations which they were called upon to perform, or their incapacity to perform them, as being unsuited to their age and strength. Of late years, the remedial measures originated by your Lordships, and so effectively seconded by the Poor Law Board, have led to greater interest being taken in the after career of those sent out; consequently, employment only has been sought for or accepted to which they were properly adapted.

Pupil-teachers.

I can report in very favourable terms of the conduct and general success of the pupil-teachers in my district. Their number is necessarily small, inasmuch as the majority of workhouses are disqualified from having them, either by inadequate numbers, inefficiency of the teacher for that special work, or some other local cause which prevented me from advising your Lordships to sanction an appointment. Whenever they have been tried, the school has invariably improved, not merely in its intellectual character, but, in its moral discipline So much of the success of a master depends upon the influence which he is able to exercise over his pupil-teacher, and so much of that influence is only to be gained by religious and moral precept and example, that both master and pupil-teacher are insensibly led to extend these more energetically to the school than when they stood in their former relative position of master and scholar. I annex (*vide Appendix* A.) a form of monthly report which I request to be forwarded to me from every school where there are pupil-teachers. The idea of it was taken from my colleague, Mr. Tufnell, and I have found it most useful in enabling me to form an opinion of the progress of such schools. It also compels the pupil teacher to pay strict and regular attention to the minutiæ of his calling.

Fluctuation in attendance in workhouse schools;

The information afforded, furnished in the first portion of this form of report has enabled me to judge pretty accurately of the average fluctuation in workhouse schools, and of the condition of the children who enter them for the first time. I have spoken of both these subjects in previous reports; it will therefore only be necessary to briefly recapitulate the facts. The average fluctuation of any workhouse school is equal to three times its average daily attendance, that is to say, if the average daily attendance has been thirty during the year next preceding my visit, the number of admissions and discharges have varied from 85 to 95; but, as the majority of these admissions and discharges consist of very young, and oftentimes the same children, the condition of the school is not thereby affected; in fact, four-fifths of the first class, and probably one-half of the second and third, will be found to have been in the school consecutively for a period of two years.

The mention made in my report for 1852, and confirmed by that of 1854, of the extreme and utter ignorance of the children when first admitted, has procured for me much volunteer information upon the subject. Chaplain after chaplain, teacher after teacher, have told me that I was correct, and that I had rather under-stated than over-stated the case. This fact proves two things; first, that there is a large amount of ignorance and heathenism in the country untouched, as yet, by any of the remedial measures of the Legislature; secondly, that ignorance and poverty almost invariably go hand in hand. and their extreme ignorance.

I append an interesting document, showing the disposal, from a large pauper school in the west of England, of such children as have left the house during the last three years. (*Vide Appendix* B.) When the fact commented upon in the preceding paragraph is taken into consideration, together with the drawbacks incidental to a workhouse so often described by my colleagues and myself, the result is not otherwise than satisfactory as to the result of an improved system of training and education. With reference to the disposal of children, I will here mention a subject, which, however incongruous it may appear to be to pauper education, has nevertheless, in sundry instances, been productive of most beneficial results; I refer to music, either vocal or instrumental, when taught by note. Apart from its humanizing influence, and the purely personal interest created in the scholars, it has been in many cases productive of great practical benefit. From the Portsea Island union school thirty-three boys obtained situations in the bands of various regiments, simply from the fact that they had a knowledge of music by note. Exclusion from the band of the school, where there is one, or from the choir, when vocal music alone is taught, is the greatest punishment that can be inflicted, as admission into them is the greatest prize. It is not easy, however, to procure everywhere the teaching of music by note; it requires a special aptitude and fitness on the part of somebody connected with the children, such as the chaplain, governor, or teacher to ensure success. Every one of the cases of successful musical instruction in my district at the present time is dependant, in each case, upon the personal interest of some one individual, and, were his connection with the school to be severed, the musical instruction would probably fall to the ground. Disposal of children after leaving school. Beneficial result of teaching music.

The district school, formerly at Aldershott, has, during the past fourteen months, suffered under unusual difficulties; the buildings formerly occupied being required for the camp, the children were obliged to be transferred to their parent workhouses; new buildings were occupied for the first time Aldershott district school.

in September last; shortly afterwards the superintendent was seized with severe illness, and the whole duties of the house were carried on by the excellent schoolmaster, Mr. Edwin Wilson. The dispersion of the children in the first place, the novelty of the new buildings, the work devolving upon all concerned to bring things into tolerable order, of course interfered with the ordinary progress of the school; but I must add that I am highly gratified that so much has been accomplished.

Cowley schools.

Of the schools at Cowley in Oxfordshire, I cannot speak from personal experience, they having been visited by my colleague, Mr. Bowyer. I only note them here in order to remark that, if they are managed with temper and prudence, they cannot fail to be successful, and a benefit, not only to the city of Oxford, but to the county at large.

Wargrave industrial schools.

At Wargrave, the improvement, since the accession of the present superintendent, Mr. Cheesman, has been very great; the nature of the building prohibits any very great apparent show, but calls forth the utmost exercise of habits of neatness, assiduity, and order. There can be no better lesson for children than to practice these habits under difficulties, and certainly this is the case at Wargrave. The industrial department has been much extended, and there are now 10½ acres of land under cultivation, from 2 acres of which, last harvest, 11 quarters of wheat were reaped; they have now 4 cows and 2 heifer calves, 26 pigs and a large litter besides; the total results, in a pecuniary point of view, are best shown by the account annexed amongst the appendices to my report, giving a total profit of 127*l.* 4*s.* 4*d.* for the year. It must always be borne in mind that spade labour, such as is in use in workhouse and district school field gardens, must necessarily be more profitable than the ordinary operations of husbandry, and that the labour employed costs, so to speak, nothing, as it must have been fed and clothed even if it were not turned to account.

Reformatory schools.

I have inspected three schools coming under your Lordships' Minute of the 2nd of June 1856; the reformatory schools of Hampshire and Berkshire, and the Bristol (Pennywell Lane) industrial school. My experience on the subject is as yet too small to enable me to speak with any confidence, or to give any information which might be valuable to your Lordships. Two facts only have I noted; first, that the children on admission are as ignorant as I have described them to be on their admission into workhouse schools; secondly, that the majority of them were destitute or orphan children. In the Pennywell Lane school, out of 29 children present, 25 were stated to be orphans.

In the appendix will be found a collection of garden accounts, which I have received from several unions, in answer to a circular which I addressed to them (*vide Appendix* C.) Those unions which have not furnished the accounts were either unable or unwilling to do so. Collection of garden accounts.

In conclusion, I must in some degree modify the opinion expressed by me in my report for 1852, where I stated, as I now think somewhat too strongly, that "the aggregate amount gives me small reason to hope that the great end in view is being attained, viz., that of depauperizing the mass of the children." Since that period a great stride has been made; and, although we can never hope that the poor will cease out of the land, yet the chain of hereditary pauperism has been materially weakened. Many extraneous circumstances have tended to aid this; the absorption of adult labour by emigration and by the war has been one of these causes, but the increased interest taken by many benevolent individuals in the progress and welfare of the children, and the greater fitness of the children themselves, equally as regards docility, intelligence, and industrial capability, have, under God's providence, been the means of fitting a far larger number for those duties in life which they will have to perform. Conclusion.

I have the honor to be, &c.

JOSHUA RUDDOCK.

To the Right Honorable
The Lords of the Committee of Council on Education.

APPENDIX A.

FARNHAM AND HARTLEY WINTNEY.

DISTRICT SCHOOL AT CRONDALL.

Monthly Return for February 1857.

—	Number on School Books.	Number in School on day of date of the Report.	Sick.	Work.	Absent.	Remarks.
Boys - -	63	59	4	35	—	The boys are now able to work on the land, owing to the favourable season of the year.
Girls - -	—	—	—	—	—	
Infants -	—	—	—	—	—	
	63	59	4	35	—	

Admitted during the Month.

Name.	Age.	Read.	Write.	Cypher.	Remarks.
	Years.				
Coles, Frederic -	12	Easy	Slate	Simple exercise	
Coles, Andrew -	9	Ditto	Ditto	Ditto	
Coles, Charles -	7	Ditto	No	No	
Holland, David -	11	Letters	No	No	
Smith, Thomas -	10	Easy	Slate	Simple exercise	
Smith, Timothy -	5	No	No	No	
White, Thomas -	8	Easy	No	No	
White, John - -	6	Ditto	No	No	

Discharged during the Month.

Name.	Age.	Read.	Write.	Cypher.	Remarks.
	Years.				
Clement, James -	11	Fair	Fair	Moderate	* Owing to the short time since the admission of these boys, it appears that the school cannot benefit them to that extent it might be hoped to do.
*Closier, Henry -	9	Fair	Fair	Comm^{d}.	
*Savage, James -	6	Easy	Slate	Easy	
*White, Thomas -	8	Easy	Comm^{d}.	Comm^{d}.	
*White, John -	6	Easy	Comm^{d}.	Comm^{d}.	

Course of Instruction for the Month of February 1857.

Bible lessons - -	1st and 2nd class on proper lessons for Sundays, and reading exercises in religious knowledge, history of our Lord, character, "Devotional Spirit," illustrated by his miracles; portions of the Sacred Scriptures read and explained to sick children in infirmary; candidates for confirmation instructed; Bible questions.
Scripture reading -	1st and 2nd and part of 3rd class: proper lessons for Sundays. 1st and 2nd class: Book of Psalms, 42nd to 70th, St. Mark, chap. 3rd to 10th. 3rd class: Scripture lessons (New Testament by Mrs. Trimmer), page 112th to end. 4th class: Sunday school-books (1), page 1 to end; (2), page 1 to end.
Miscellaneous religious instruction.	1st and 2nd part of 3rd class committed to memory the Collect and Gospel for Sundays: part of 3rd and 4th class, the Collect only, exercised and instructed on the same; and whole school, after repeating, from memory, catechism, were questioned, &c. on the same.
Secular reading -	1st and 2nd class: "Agricultural Class Book," page 130th to 133rd, 100th to 115th; Third book lessons, page 235th to 246th. 3rd class: Fourth book lessons, page 286th to end. 4th class: Second book lessons, page 1st to 19th, 30th to 74th; reading disentangled.
Arithmetic - -	1st class (on paper): practice "Calder Exercises" 39, 40, and 41, pages 110 and 111. 2nd class (on paper): compound subtraction. 1st class: proportion, interest; and 2nd class, compound rules (in classes, on black-board). 3rd class, compound rules. 4th class, easy sums and figures. Whole school exercised in tables and mental arithmetic.
Geography - -	1st and 2nd class, Fourth book lessons, page 105th to 123rd. 3rd class, Third book lessons, page 147th to 156th; Fourth book lessons, page 52nd to 61st. 4th class, Second book lessons, page 130th to 138th; sequel, page 18th to 35th. 1st, 2nd, and 3rd class (collectively), "structure of the earth, text books, Cornwell's and Scottish Association.
Grammar - -	Parts of speech and derivation of words, &c. from exercises in reading.

Course of Instruction for the Month of February 1857—*continued.*

Writing — Copybooks	1st, 2nd, and 3rd part of 4th class, large text and mixed hand copies.
Writing — Slates	Remainder of 4th class, signs, letters, and words, commencing.
Dictation — Paper	2nd and part of 3rd class. 1st class, from memory, abstracts in religious knowledge, geography, &c.
Dictation — Slates	Remainder of 3rd class, easy portions. 1st, 2nd, and part of 3rd class, from reading exercises.
History - - -	1st and 2nd class, "Colonies of Great Britain" (1), page 1st to 18th.
Other subjects - -	Whole school exercised in singing and chanting, marching, and school pieces, arithmetical tables, and rounds, spelling, and in writing letters to relatives, marching, drill, &c.

Industrial Education.

Tailoring - -	None.
Shoemaking - -	None.
Field work - -	Senior boys employed in digging and manuring land, planting beans and potatoes, setting acbbage-plants, fruit-trees, &c.
Other employment -	Making paths, breaking stones, attending piggery, stables, assisting in preparing vegetables for cooking, &c.
Knitting - - -	None.
Sewing and Mending	When required.
Washing - - -	None.
Household work -	Senior boys employed in general household work.
Other employment -	Fuel boys, shoe-blacks, cleaning lamps, pumping, post, milk and errand boys, cleaning coppers, &c.

Number of children in each class:

First Class - - - - -	14
Second „ - - - - -	18
Third „ - - - - -	14
Fourth „ - - - - -	17
Total - -	63

Appendix B.

List of Boys who have been placed out to service since 1853.

Names.	Date of Discharge.	How disposed of.
Bye, H. George -	- - -	Apprenticed to the hatting by his mother; is doing well.
Beechey, James -	1853	With a confectioner.
Brock, John - -	June 1854	Ironmonger in Clare Street; he is about two years at this place.
Burge, Edward.	—	—
Carter, George -	1851	Working at an ironfoundry.
Cole, George - -	1852	Employed by a corn-factor in Clifton; bears a good character.
Cannard, Richard -	1853	Still at the same place, in Castle Street; master is quite satisfied. I do not approve of his place of lodging.
Cottle, James - -	May 1853	Enlisted.
Cottle, John - -	1852	He is now about three years at Mr. Insell's sugar-house.
Chapman, John -	1854	Merchant service; has been to the North Sea, Baltic, and Crimea.
Cox, Frederick -	July 1853	Has completed his third year's apprenticeship at shoemaking.
Clancy, Daniel -	1854	Hairdresser near Princess Street; gives satisfaction.
Farley, Joseph -	August 1854	This boy has been apprenticed to a shoemaker, but afterwards removed, master in reduced circumstances; he is now employed by a biscuit manufacturer, Queen Square.
Claridge, Edward -	Sept. 1851	Remained three years with a baker; proved dishonest.
Charles, William.	—	—
Davis, John - -	March 1853	Dishonesty; returned to workhouse; he has since left, and is working for a shoemaker.
Dibble, Robert -	1855	Entered Land Transport Corps.
England, James -	Nov. 1852	Apprenticed to a shoemaker on Lawrence Hill; conduct good.
Evans, Samuel -	April 1853	At the same place; confectioner in Wine Street; he bears an excellent character.
Edwards, William -	Nov. 1853	A wandering disposition; has had several places; enlisted.
Edwards, Henry -	1854	Apprenticed to a shoemaker; gone to sea.
Fisher, Thomas -	1854	At the blue works; he is a very indifferent character.
Francis, Edwin -	1854	Taken out by a London gentleman.
Griffin, William -	1854	With a chemist and druggsit, Clare Street; his master speaks very highly of him; has removed his mother from workhouse.
Nield, George -	1853	Entered Land Transport Corps.
Griffiths, David -	Aug. 1852	Apprenticed, by his sister, to a cooper.
Green, Henry - -	- - -	Works at cabinet-making, Merchant Street.
Howell, Hubert - -	- - -	Unknown.
Holt, William - -	- - -	Cripple; sells stay-laces, &c.
Hodge, Charles -	April 1855	Cabinet-making with his uncle.
Jones, George - -	Dec. 1853	Errand boy to a chemist, St. Agustin Parade.

List of Boys, &c.—*continued.*

Names.	Date of Discharge.	How disposed of.
Jones, Joseph	1856	Employed by a confectioner.
Jones, Edwin	1855	Working at the Bristol potteries; he is an excellent boy.
James, Robert	- - -	Absconded.
Keef, Daniel	1851	Cotton-factory.
King, John	- - -	Chimney-sweeper, with his brother.
Long, John	1855	Umbrella manufacturer, Union Street; his master is very much pleased with him; he has 4*l.* in the bank.
Lumberg, John	1852	Unknown.
Myson, Joseph	Jan. 1854	Biscuit-making at Queen's Square; his master has given him an excellent character.
Meredith, Frederick	July 1854	At Queen Square; he has been put at the desk.
M'Grath, Thomas	June 1854	Cripple; mendicant.
M'Crate, Michael	April 1853	Sailors.
M'Crate, Robert	- - -	Sailors.
Moore, William	Jan. 1854	When in the workhouse was locked up for bad conduct, he broke through the door, was sent to prison. He has gained admission to the Reformatory School; he is making very little improvement.
More, Henry	May 1853	With a painter, King Street; is doing very well.
Miles, Thomas	Aug. 1852	Working for a shoemaker at Bedminster.
Mohoney, Daniel	May 1854	Apprenticed to the ship-carpentry.
Nichols, John	Aug. 1853	Enlisted.
Phillips, Edwin	1854	Imbecile; removed to men's ward.
Pizzloli, John	March 1852	Smithing.
Pizzoli, Joseph	March 1852	Carpentry.
Purnell, George	Sept. 1852	Smithing.
Purnell, Alfred	Aug. 1852	Stoker; in the receipt of 14s. per week.
Polman, Francis	July 1853	Apprenticed to chairmaking.
Pike, George	June 1854	Cotton factory; 6*s.* per week.
Parker, Robert	- - -	Boat-building at Patterson's.
Price, Thomas	May 1853	Barber in Bath.
Player, Henry	- - -	Unknown.
Rollings, Charles	March 1853	At glassworks, Broadmead.
Scamp, George	Dec. 1853	Entered Land Transport Corps.
Suthard, Joseph	Nov. 1852	Unknown.
Smith, James	Aug. 1852	Unknown.
Spurrier, Alfred	May 1855	Unknown.
Thomas, John	June 1853	Reformatory School; greatly improved; gone to Africa; has promised to write to me.
Vaughan, George	Oct. 1852	Attends the Clifton omnibuses.
Blackmore, Thomas	July 1853	Unknown.
Wright, Thomas	Sept. 1852	Private in 97th Regiment; returned from the Crimea; volunteered into the East India India Company; is on his road to India; has written to me several times.
Wright, Edwin	July 1853	Employed in porter stores.
Weeks, Charles	- - -	Left the workhouse with his mother.
Wall, Benjamin	1854	Enlisted.
Waymouth, George	Sept. 1851	Shoemaker; is doing business for himself; weekly earnings average 22*s.*
Wall, Michael	July 1851	Unknown.
Wall, John	July 1851	Unknown.
Daws, Abraham	- - -	Unknown.
Daws, Thomas	- - -	Unknown.
Burges, Willliam	- - -	Unknown.
Davis, James	April 1853	Apprenticed to a shoemaker.
Caulsting, James	April 1853	"Boots" at a public house.

List of Boys, &c.—*continued.*

Names.	Date of Discharge.	How disposed of.
Sheppard, Alfred -	Oct. 1851	Unknown.
Spear, Edwin -	Sept. 1854	Chainmaking.
Spear, Isaac - -	Sept. 1854	Living with his parants.
Coveny, Robert.	——	——
Lemmon, William -	May 1855	Billiard-marker at Tewkesbury.
Carter, Frederick -	May 1854	Employed by a pawnbroker; attends our chaplain's Sunday-school.
Higgins, Mathew -	Jnne, 1353	Tailor; takes in work on his own account.
Noble, Charles -	- - -	Unknown.
Noble, William -	July 1853	Unknown.
Roberts, Thomas -	Feb. 1856	Apprentice to a shoemaker.
Woodruff, John -	- - -	Unknown.
Howell, Thomas -	Jan. 1855	In a military band.
Regan, James - -	- - -	Shoemaker.
Regan, Henry - -	June 1854	Tailor.
Rowe, Alfred - -	- - -	Unknown; a wreckless character.
Hyder, Alfred - -	- - -	Removed to Clifton union.
Kennedy, William -	- - -	Unknown.
Feltham, Francis -	April 1853	Apprenticed to a tailor; has given great satisfaction.
Long, James - -	April 1853	By his own exertions he has succeeded in being apprenticed to a ship-carpenter.
Paul, Robert - -	- - -	Unknown.
M'Carthy, John -	- - -	Unknown.
Abbott, Thomas -	Aug. 1854	Entered the navy.
Long, Harry - -	1855	Ropemaking.
Taylor, Andrew -	Aug. 1855	Bristol Potteries; receives from 9*s.* to 10*s.* per week; he has persuaded his mother to leave the workhouse.

Appendix C.

Copy of Circular addressed to Clerks of Unions.

Sir, *Council Office, London, 2 March* 1857.

I should feel obliged if, with the consent of your Board of Guardians, you could furnish me with the following information respecting the land attached to your union workhouse :—

1. A detailed account of the gross receipts and expenditure?
2. Quantity of land under cultivation?
3. Nature of the produce?
4. How disposed of, whether sold or consumed in the house?
5. If consumed in the house, how charged?
6. Whether the boys are employed on the land?—how many, and whether they work with, or apart from, the adult paupers?
7. Whether there is a special agricultural instructor, and if not, how the field work is superintended?

The account asked for in query No. 1. should, if possible, be brought down to the 25th of March 1857, but any account will be of value.

Faithfully yours,

(Signed) Joshua Ruddock,

Her Majesty's Inspector of Schools.

AXBRIDGE.

SIR, *Axbridge*, 15 *April* 1857.

WE comply with your request, and regret we were not before in a position to do so.

We are, &c.

(Signed) RD. and R. B. TREW,
Clerks to the Axbridge Union.

J. Ruddock, Esq.

1. A detailed account of the gross receipts and expenditure?	
2. Quantity of land under cultivation? -	7 acres 2 roods.
3. Nature of the produce? - -	Turnips, wheat, potatoes, mangold.
4. How disposed of,—whether sold, or consumed in the house?	Both; *vide* Account.
5. If consumed in the house, how charged?	Ditto.
6. Whether the boys are employed on the land? how many? and whether they work with, or apart from, the adult paupers?	20 boys; work apart from the men.
7. Whether there is a special agricultural instructor? and if not, how the field work is superintended?	Yes.

STATEMENT of AGRICULTURAL LABOUR ACCOUNT from March 1856 to March 1857.

RECEIPTS.	£	s.	d.
Produce of ground consumed in workhouse, and debited to maintenance - - - -	35	17	0
Potatoes sold - - - - -	30	10	2

Total - - -	£92	17	8

(Signed) RICHARD and RD. B. TREW, Clerks.

BANBURY.

SIR, *Banbury, 3 April* 1857.

I WAITED till the 25th of March, in the hope that I should have been able to answer satisfactorily the several questions submitted to me upon the 2nd ultimo; but I regret to say, that through the illness of the workhouse master I cannot do so.

As soon as I get the information, I will forward it immediately.

I am, &c.

J. Ruddock, Esq. (Signed) W. W. EWING, Clerk.

BATH.

SIR, *Bath, 24 April* 1857.

AGREEABLY with your request to be furnished with certain information respecting the land attached to this union workhouse, I beg now to report as follows:—

1. ACCOUNT of the GROSS RECEIPTS and EXPENDITURE for the Year ended 25 March 1857.

DR.	£	s.	d.	CR.	£	s.	d.
To annual interest on cost of about 11 acres of land	55	0	0	By vegetables brought into consumption account, Michaelmas half year*	35	17	4
„ tithe rent charge, poor's rate, and land tax	8	16	0	„ ditto, Lady-day half year	79	0	7½
„ wear and tear of tools, say at 10 per cent.	1	0	0	„ portion of salary of industrial teacher repaid by Government	23	8	0
„ 20 sacks of seed potatoes	10	0	0				
„ Superintendent's wages	31	4	0				
	106	0	0				
„ Profit	32	5	11½				
Total	£138	5	11½	Total	£138	5	11½

* The eight-acre field having been but recently purchased, and wholly planted with potatoes, accounts for so small a return on the Michaelmas half year. There is a large stock on hand, which next year's account will exhibit.

2. The land under cultivation is about eleven acres.

3. The produce thereof is potatoes, cabbages, carrots, parsnips, &c.

4, 5. Wholly consumed by the inmates of the establishment, and brought into master's account weekly at market prices.

6. About twenty-four lads, apart from the adult paupers, are employed.

7. There is a special agricultural instructor.

Yours faithfully,

J. Ruddock, Esq., (Signed) H. P. HULBERT.
Her Majesty's Inspector of Schools.

BEDMINSTER.

SIR, *Easton in Gordano, near Bristol, 3 April* 1857.

IN transmitting you the accompanying return, in accordance with your request, I am directed by the Guardians to acquaint you that they have now only two acres of land under cultivation for the employment of the paupers. Mr. Smyth having given to the Justices for Somersetshire the two acres they rented of him for the purpose of building a police station.

I have, &c.

J. Ruddock, Esq., (Signed) THOMAS COLES, Clerk.
Her Majesty's Inspector of Schools.

Re Workhouse Garden for the Year ended Lady-day 1857.

Question.	*Answer.*
1. Receipts - - - - Expenditure - - - -	20*l.* for potatoes. Rent, 8*l.* Rates and Taxes, 15*l.*
2. Quantity of land under cultivation -	About four acres.
3. Nature of the produce - -	In general potatoes.
4. How disposed of,—whether sold or consumed in the house?	Consumed in the house.
5. If consumed in the house how charged?	Debited in the ledger to the provision account, and credited to common charges or establishment account.
6. Whether the boys are employed on the land?—how many? and whether they work with, or apart from, the adult paupers?	About four boys are occasionally employed, and they work with the adult paupers.
7. Whether there is any special agricultural instructor, and if not how the field work is superintended?	There is no special agricultural instructor, and the fieldwork is superintended by the master and porter.

BIDEFORD.

SIR, *Bideford*, 19 *March* 1857.

I AM directed by the Board of Guardians to state, in reply to your letter requesting information respecting the land attached to this union workhouse, that when you visit this workhouse school, they will be happy to afford the information you require.

I am, &c.

J. Ruddock, Esq., (Signed) H. A. HARVIE.
Her Majesty's Inspector of Schools.

SIR, *Bideford*, 1 *April* 1857.

I BEG to acquaint you that your last letter was laid before the Guardians at their meeting yesterday, and I was directed to state in reply that they prefer personally communicating to you the information desired as named in my former letter.

I have, &c.

J. Ruddock, Esq., (Signed) H. A. HARVIE.
Her Majesty's Inspector of Schools.

BRADFIELD.

SIR, *Reading*, 25 *March* 1857.

IN reply to your letter of the 2nd instant, I inclose you a copy of an account of the receipts and expenses in connexion with the workhouse garden.

The quantity of land under cultivation is 6½ acres.

Nature of the produce:— potatoes, cabbages, onions, carrots, parsnips, swede turnips, mangold wurzel, beans, rye, grass, lucerne, and barley.

Which is disposed of as follows:—Vegetebles, used in the house; barley, beans, and small potatoes consumed by the pigs; swede turnips, mangold wurzel, cabbage, carrots, parsnips, rye, grass, and lucerne, consumed by the cows.

The value is charged in the master's day-book to the provisions, pig, and cow accounts.

The average number of boys employed on the land is sixteen, and they are kept apart from the adult paupers as much as possible.

An agricultural instructor is kept, to be with the boys when at work in the garden, under the superintendance of the master of the workhouse.

Trusting these particulars will serve the purposes required.

I have, &c.

J. Ruddock, Esq., (Signed) RUPERT CLARKE.
Her Majesty's Inspector of Schools.

BRADFIELD UNION.

2. Four acres.	5. All to common charges.
3. Potatoes, parsnips, carrots, turnips, cabbage, onions, &c.	6. None.
4. Chiefly used in the house, some sold.	7. None. By the porter, under the direction of the master.

CHARD.

SIR, *Chard Poor Law Union, 15 April* 1857.

I BEG to enclose the information required respecting the produce and management of the land attached to our union workhouse.

J. Ruddock, Esq., I have, &c.
Her Majesty's Inspector of Schools. (Signed) T. B. GOULD, Clerk.

1. A detailed account of the gross receipts and expenditure.	
2. Quantity of land under cultivation?	2½ acres.
3. Nature of the produce?	Potatoes and other vegetables.
4. How disposed of,—whether sold or consumed in the house?	Consumed in the workhouse.
5. If consumed in the house, how charged?	Provisions account.
6. Whether the boys are employed on the land? how many? and whether they work with, or apart from, the adult paupers?	About twelve boys are employed on the land, and apart from the adult paupers.
7. Whether there is a special agricultural instructor, and if not, how the field work is superintended?	No agricultural inspector. The boys are superintended by the schoolmaster.

DR. GARDEN ACCOUNT, 25 March 1856–7. CR.

P.S.—Two acres of the land is this year sown to wheat.

CREDITON.

SIR, *Crediton Union, 31 March* 1857.

By the direction of the Guardians of this Union, I beg to send you on the other side answers to the queries contained in your communication of the 2nd instant.

I am, &c.

J. Ruddock, Esq., (Signed) JAMES WELLINGTON, Clerk.
Her Majesty's Inspector of Schools.

Queries.	*Answers.*
1. A detailed account of the gross receipts and expenditure ?	Sent herewith, for year ended 25th March 1857.
2. Quantity of land under cultivation ?	About two and a half acres.
3. Nature of the produce ?	Vegetables.
4. How disposed of,—whether sold or consumed in the house ?	Consumed in the house.
5. If consumed in the house, how charged ?	To provision account.
6. Whether the boys are employed on the land ? how many ? and whether they work with or apart from the adult paupers ?	Yes, in part; about six or eight, sometimes apart, sometimes with the old men.
7. Whether there is a special agricultural instructor ? and if not, how the field work is superintended ?	No. By the governor and schoolmaster.

CHIPPING NORTON UNION.

ANSWERS TO QUESTIONS.

1, 2, 3, 4, 5. Six chains of land only are set apart as a kitchen garden, from which vegetables to the amount of 8*l.* 6*s.* has been charged during the past year to the provision account. The remaining portion of the land (about four acres) is treated as a small farm, and the produce sold off.

6. The boys are seldom employed on the land, service being provided for them immediately they are able to work, which is considered by the guardians of this Union preferable to employing them as paupers.

7. The workhouse master superintends the cultivation of the land.

(Signed) A. L. Rawlinson,
Clerk of the Union.

CHIPPENHAM.

Sir, *Poor Law Union Office*, 12 *March* 1857.

I beg to send you on the annexed sides the statement of account and other particulars, as requested by your letter of the 2nd instant.

I have, &c.

J. Ruddock, Esq.
Her Majesty's Inspector of Schools.

(Signed) Jacob Phillips,
Clerk.

				12	2	8½
				£41	9	2

Answers to Queries.

1. A detailed account of the gross receipts and expenditure?	Furnished above.
2. Quantity of land under cultivation?	Three and a half acres.
3. Nature of the produce?	Wheat, potatoes, and other garden vegetables.
4. How disposed of?	As shown in the account.
5. If consumed in the house—how charged?	Charged at the market price, and entered in the provisions account.
6. Whether the boys are employed on the land? how many? and whether they work with or apart from the adult paupers?	Yes; nine on an average. The boys at the Lacock workhouse are alone employed on the land. The adult paupers being kept at the Chippenham workhouse and not employed on the land. Hired labourers are sometimes employed to assist the boys.
7. Whether there is a special agricultural instructor?	Yes, a superintendent of labour.

CLIFTON UNION.

DR. GARDEN ACCOUNT for the Year ended Lady-day 1857. CR.

	£	s.	d.
Sale of 28 pigs	88	14	8
Vegetables from land in cultivation of boys	42	11	10
Vegetables from land in cultivation of adults	82	12	9
	£213	19	3

	£	s.	d.
Rent of 8 acres of land, more or less, at 6*l.* per acre	48	0	0
Rates, say, poor, at 3*s.*; highway, 6*d.*; rentcharge, 4*d.*; church rate, 2*d.*; net rent	8	0	0
Seed for garden	9	8	9
Potatoes for pigs	10	2	3
Salt for manure	1	4	0
Profit to Union	137	4	3
	£213	19	3

2. Quantity of land under cultivation	8 acres.
3. Nature of produce	Potatoes and other garden vegetables.
4. How disposed of	Sold to workhouse.
5. How charged	Market price to provision account.
6. Whether boys are employed	Yes, 20; 10 in the morning and 10 in the afternoon.
7. A special agricultural instructor for children, at a salary of 50*l.* per annum, which is repaid by Government.	

9 May 1857. (Signed) ROBERT MERCER, Clerk.

CLUTTON.

ANSWERS TO QUESTIONS PROPOSED.

1. Given on the other side.
2. Two acres.
3. Potatoes, mangold, cabbage, carrots, parsnips.
4. Consumed in workhouse.
5. Charged to provision account.
6. The boys are chiefly employed; about thirty, average. The bigger boys do the digging, wheeling and other heavy work; smaller boys weeding, and other little jobs that can be provided for them. They are all kept at some kind of work in the garden and work apart from the adults.
7. No special agricultural instructor. The boys are ably instructed by the schoolmaster in their work. They appear to work cheerfully, and willingly do whatever they are told. The benefits derived from this source of instruction are many: healthy boys, taught the way to get their own living, to gain liberty and independence. We have very little trouble to get the boys out to service.

14 March 1857. (Signed) JAMES DURY, Master.

COOKHAM.

SIR, *Cookham Union, 9 March* 1857.

IN answer to your letter of the 2nd of March, I beg to state that queries one to three will be answered in the enclosed Balance Sheet. The manner in which the produce is disposed of is—part is consumed in the house, and part sold; that consumed in the house is debited to the common charges; that that is sold, the money is paid over to the Treasurer to the credit of common charges. About an average of eight boys are employed on the land, occasionally one or two old men assist them in digging. There is no special agricultural instructor. The field work is superintended by myself. I am sorry to say that I am not able to give you the account down to March 1857, my accounts being made up from Michaelmas to Michaelmas.

I have, &c.

J. Ruddock, Esq., (Signed) W. MALYON.
Her Majesty's Inspector of Schools.

ACCOUNT of EXPENSES upon, and PRODUCE of, TWO ACRES of GROUND cultivated in connexion with the COOKHAM UNION.

Balance, (for profit)	39	18	7				
	£63	8	1		£63	8	1

Copy of Letter addressed to Guardians of the Cookham Union, with foregoing account.

Cookham Union,
GENTLEMEN, *9 March* 1857.

WITH much pleasure I again lay before you the balance sheet of another year, showing the result of union labour on two acres of land.

You will observe that the balance for profit continues to increase, being 39*l.* 18*s.* 7*d.*, as against 36*l.* 3*s.* 6*d.* in the previous year, the causes of which are,—

1st. Being able to produce on some part of the land two crops in one year.
2nd. There being no charge for labour.

I have endeavoured to keep an account of the expense of the labour, but the difficulty of doing this in a satisfactory manner has been so great that I have entirely abandoned it.

The points chiefly to be borne in mind, in reference to the success of this experiment, are that the labour could not have been, I think, more profitably employed, and that labour has a greater tendency towards good discipline than idleness.

I have, &c.
(Signed) WILLIAM MALYON.

EASTHAMPSTEAD.

SIR, *Easthampstead Union, 27 March* 1857.

AGREEABLY to your request, I beg to forward you a balance sheet of farm account, which, with the information given to your annexed queries, I trust, will be satisfactory.

Yours, &c.

J. Ruddock, Esq., (Signed) JAMES BANTON,
Her Majesty's Inspector of Schools. Master.

INFORMATION relating to the EASTHAMPSTEAD UNION LAND, requested by J. RUDDOCK, Esq., Her Majesty's Inspector of Schools.

Inspector's Questions.	*Master's Replies.*
1. A detailed account of the gross receipts and expenditure?	See enclosed statement of expenditure and receipts for the year ending Lady-day 1857.
2. Quantity of land under cultivation? -	Ditto.
3. Nature of the produce? - - -	Ditto.
4. How disposed of,—whether sold, or consumed in the house?	Part sold, part consumed in the house.
5. If consumed in the house, how charged?	Charged in provision book as new stock.
6. Whether the boys are employed on the land? how many? and whether they work with or apart from the adult paupers?	Yes; about nine in number, on the average, working with the adults.
7. Whether there is a special agricultural instructor, and if not, how the field work is superintended?	No; the work is superintended by myself.

Balance, or net profit‡				65	12	8½							
Total			£	120	8	6½	Total			£	120	8	6½

* Of the 6 A. 1 R. 38 P., one acre is the union garden, and 2*l.* 10*s.* as a rent is included in the 11*l.* 18*s.*

† This, in blank, as the seed wheat. About half a gallon was gleaned by the children from last year's crop. Sold on the ground.

‡ In unions where means are provided for the master to market the produce, *i.e.*, the use of a horse and cart, which are kept for union funerals and other purposes, in which hiring is resorted to, this profit would be considerably increased.

‖ The potatoes are stated at the price when dug up, when the Board, it is thought, would lay in a stock if there were no land; the crop, however, when not required for consumption, and therefore kept in stock, generally realizes from 2*s.* 6*d.* to 3*s.* per bushel, which would much increase the receipt.

§ Two acres sold on the ground, and upon which the buyer realized a large profit.

EXETER, ST. THOMAS' UNION.

SIR, *Exeter,* 10 *March* 1857.

IN answer to your letter, dated the 2nd instant, we are directed by the Guardians of this Union to forward the following information, viz. :—

From Lady-Day, 1855, to this date,—

RECEIPTS.	£	s.	d.	EXPENDITURE.	£	s.	d.
Potatoes	77	13	11½	Rates and taxes	3	3	4
Turnips	1	10	0	Rent and tithes	14	19	5
				Seed	5	9	8
				Manure	4	16	2
				Tools	1	13	0
	£79	3	11½		£30	1	7

ANSWERS.

No. 2.—Two acres.
„ 3.—Vegetables.
„ 4.—Consumed in the house.
„ 5.—As provisions for the house.
No. 6.—Yes; fifteen; apart from adult paupers.
„ 7.—Yes.

We are, &c.

J. Ruddock, Esq., Her Majesty's Inspector of Schools. (Signed) BIDWILL AND BOWRING, Clerks.

FARINGDON.

SIR, *Faringdon, 28 March* 1857.

IN compliance with your request, I beg leave to forward to you the information referred to in your letter of the 2nd of March instant, relative to the land attached to this union workhouse. The accompanying sheet contains the whole of the account for the year ended Lady-day last, which, I hope, will be satisfactory.

I remain, &c.

J. Ruddock, Esq., Her Majesty's Inspector of Schools. (Signed) JOHN HAINES, Clerk to the Board of Guardians.

INFORMATION requested on the following points, by Mr. RUDDOCK's Letter, dated 2 March 1857.

1. A detailed account of the gross receipts and expenditure?
   Please see copy of the entire account for the year ending Lady-day 1857, sent herewith.
2. Quantity of land under cultivation?
   About three and a half acres.
3. Nature of the produce?
   Potatoes are the principal crop; cabbages, onions, and mangold wurzel have also been grown.
4. How disposed of,—whether sold, or consumed in the house?
   Almost the whole of the potatoes, with the exception of those damaged, have been consumed in the house; the whole of the cabbages have also been consumed in the house;—and
5. If consumed in the house, how charged?
   The master has charged the same in his day-book (an invoice being furnished weekly), at prices as near as possible to those for similar articles in the neighbourhood. The articles not consumed by the inmates have been sold.
6. Whether the boys are employed on the land? how many? and whether they work with or apart from the adult paupers?
   Yes; fifteen; no adult paupers work in the garden; the whole of the work is done by the boys and their supertendent.
7. Whether there is a special agricultural instructor, and if not, how the field work is superintended?
   There is a special agricultural instructor who is paid 15*s.* weekly.

7. Yes.

HUNGERFORD.

HONOURED SIR, 12 *March* 1857.

IN reply to yours of the 2nd instant, which I should have answered before, but knowing our garden account was in the hands of the printer, I thought it would be well to wait a few days, to enable me to furnish you with it, which I now forward, trusting that it will satisfactorily answer several of your queries.

1. See printed statement.
2. Six acres.
3. See statement.
4. Consumed in the house and by the stock, cows, and pigs.
5. To the provision account.
6. Average number of boys, eight; employed every afternoon, weather permitting, but never with the adults.
7. A special agricultural teacher.

Should you require any further information, if in my power, I shall be happy to supply it.

I am, &c.

J. Ruddock, Esq., &c. (Signed) THOS. W. DUNN.

Hungerford Union.

Replies to queries:—

No. 2. 6½ acres.

4. Potatoes, turnips, cabbage, and straw consumed in the workhouse; the remainder sold.

5. Entered in the provision receipt book, in the same way as goods that are purchased, the common fund account being credited with with the value.

6. All the boys who are able to work are employed, separately from the men as much as possible.

7. There is no special agricultural instructor; the master and schoolmaster superintend the work.

Keynsham, 22 April 1857. (Signed) THOS. OXFORD, Clerk.

LAUNCESTON.

SIR, 12 *March* 1857.

I SEND you answers to your questions in the order you have put them :—

1. Receipts, 8*l.* 6*s.* 10*d.*; payments, 17*l.* 18*s.* 7*d.*, for seeds, manure, and rent for the year past.
2. About two acres.
3. Vegetable.
4. Consumed in the house.
5. To in-maintenance.
6. About six boys, two days in a week with men.
7. Superintended by master of house.

I am, &c.

J. Ruddock, Esq., (Signed) JOHN DINGLEY, Clerk.
Her Majesty's Inspector of Schools.

NEWTON ABBOT.

SIR, 28 *March* 1857.

IN answer to your letter of March 2, I inclose copies of the agricultural accounts for the year ended Christmas last, as presented by the Agricultural Committee to the board at their meeting on the 18th inst.

In addition to the information contained in that report, I have to state that the boys work under the superintendence of an agricultural instructor and superintendent of labour, engaged at a salary of 40*l.* per annum, and that they work separately from the adults.

I am, &c.,

J. Ruddock, Esq., (Signed) JOHN ALSOP, Clerk.
Her Majesty's Inspector of Schools.

REPORT of the AGRICULTURAL COMMITTEE for the Year ended Christmas 1856.

The Committee, in presenting to the Board their annual report of the labour scheme for the past year, congratulate them that the many advantages anticipated when it was first introduced, continue to be fully realized.

The total quantity of land under cultivation is about six acres, and the following is a list of the principal crops grown thereon during the past year :—

132 bags of potatoes,	7½ tons of mangold wurzel,
32 bags of wheat,	850 lbs. of onions,
57 cwt. of cabbages,	1,840 lbs. of leeks,
25 cwt. of parsnips,	64 cwt. of carrots.

The number of hours of labour, &c., performed during the past year, by the different classes of inmates employed on the land, has been as follows :—

The aggregate number of hours of field labour done by adult paupers (mostly aged and infirm) - - - - -	10,860
The number of adult paupers at work on an average of 8½ hours daily - - - - - - - - -	5
The total number of hours of field labour done by boys - -	13,239
The number of boys at work, five days each week, and from 3 to 6 hours daily - - - - - - - -	22
The number of boys in the house fit for service at Christmas was	10

Seventeen boys were provided with situations in the course of the year.

(Signed) E. S. BEARNE, Chairman.

NEWPORT, ISLE OF WIGHT.

SIR, *Isle of Wight, 7 April* 1857.

I HAVE to acknowledge the receipt of your letter of the 2nd ultimo, and in reply to forward to you herewith the information respecting the land attached to the workhouse of this incorporation for which you apply.

I am, &c.

J. Ruddock, Esq., Her Majesty's Inspector of Schools. (Signed) J. C. CLARKE, Clerk to the Guardians.

Questions.	*Answers.*
1. A detailed account of the gross receipts and expenditure.	See separate paper.
2. Quantity of land under cultivation.	About ten acres.
3. Nature of the produce. - - -	This is shown in the statement of receipts and expenditure; see separate paper.
4. How disposed of, whether sold or consumed in the house?	Consumed by the officers of the workhouse and by the pauper inmates, with the exception of one ton of parsnips, sold for 2*l.* 18*s.*
5. If consumed in the house, how charged?	In the provisions receipt and consumption account.
6. Whether the boys are employed on the land? how many? and whether they work with or apart from the adult paupers?	On an average thirteen boys are employed daily on the land; they work apart from the adult paupers.
7. Whether there is a special agricultural instructor, and if not, how the field work is superintended	There is no direct field work; the garden work is superintended by the governor of the house, there is also a superintendent of labourers, who is not specially an agricultural instructor.

REDRUTH.

SIR, *Redruth Union Workhouse, 9 March* 1856.

IN answer to your letter of the 2nd instant, received this morning, I beg to hand you the following, from the 25th of March last to the 25th instant, or as near as possible.

1st. Received from the garden, for the use of the house, and sold, 30*l.* Cost of manure, garden seeds, and potatoes for planting 5*l.* 15*s.* 8*d.*

2nd. About three acres.

3rd. Potatoes, half an acre; cabbage, quarter of an acre; brocoli, quarter half an acre; parsnips, quarter of an acre; leeks and onions, quarter of an acre; mangles and carrots, quarter of an acre; fruit trees and seedling beds, quarter of an acre: grass, three quarters of an acre; total, three acres. The grass is consumed by the Guardians' horses.

4th. An abundant supply used in the house, and the remainder sold.

5th. The vegetables are charged to the provision account, 6*s.* weekly, and the potatoes to the same account per cwt.

6th. Yes; six boys, and kept apart as much as possible, under the care of the schoolmaster.

7th. The porter superintends the garden work, he being an efficient workman.

I am, &c.

J. Ruddock, Esq. (Signed) JOHN PENBERTHY.
Her Majesty's Inspector of Schools.

TAUNTON.

Sir, *Taunton Union*, 1 *April* 1857.

Your letter of the 2nd ultimo having been handed to me this morning by the clerk, I take the earliest opportunity of sending all the information I am able.

1st.—Nil.

2nd.—Three acres,

3rd.—Potatoes, peas, beans, carrots, parsnips, cabbage, onions, leeks, &c.

4th.—Consumed in the house.

5th.—Nil.

6th.—Yes ; average number for the last half year, fifteen ; by themselves.

7th.—No ; by schoolmaster.

One acre and a quarter of the land has been added since Michaelmas last, some men were employed to assist in breaking the ground the first time, since which the work, so far, has been performed entirely by the boys.

I remain, &c.

J. Ruddock, Esq., (Signed) Thos. Bailey.
Her Majesty's Inspector of Schools.

TRURO.

Sir, *Truro*, 11 *April* 1857.

In reply to your letter of inquiry of the 2nd ultimo, I beg to inform you that—

1st.—A detailed account is sent herewith.

2nd.—The quantity of land under culture is nine acres.

3rd.—The nature of produce.—Last year, vegetables.

4th.—The produce is consumed in the house, and by the pigs and horse.

5th.—It is charged at contract prices to the workhouse.

6th.—The boys are employed on the land ; average, about six. They work apart from the adult paupers, under the eye of the schoolmaster.

7th.—No agricultural instructor ; the work is superintended by the Governor.

WALLINGFORD.

SIR, *Union Workhouse*, 11 *April* 1857.

HEREWITH I send you the required account of the produce of the seven acres of land occupied by the Wallingford union, ending 28th March 1857. With respect to the labour, it is under the superintendence of myself and the porter: we employ the second-class boys in the morning, and the first-class in the afternoon, as much by themselves as circumstances will allow. We generally employ them in the gardens; if in the fields, generally apart from the adults, and under the care of one of the old men; the number depending on those employed other ways, such as cleaning their rooms, &c. I shall be pleased to furnish you with any other information you may require.

I have, &c.

WELLS.

SIR, *Wells Union, 27 March* 1857.

I HAVE to apologize for allowing your letter of the 2d instant to have remained so long unanswered, but added to the extra duties just now, the close of the parochial year, I have, for some time past, been unwell.

In reply to your questions, we occupy about twelve acres of land, say three for pasture, and nine garden; the produce of the latter is chiefly vegetables and roots.

Two cows are kept, and several pigs; the produce of the land wholly supplies the house with vegetables, as do the cows with milk, and partly with butter. The value of such produce is charged to the provisions account as though contracted for.

The average number of boys employed on the land is twelve; they chiefly work apart from the adult paupers.

There is no special agricultural instructor; the whole management is under the superintendence of the master, who himself has been a farmer.

I have, &c.

J. Ruddock, Esq., (Signed) HENRY BADCOCKE, Clerk.
Her Majesty's Inspector of Schools.

WILLITON.

SIR, *Williton Union, 5 March* 1857.

I HAVE the honor to forward for your information the enclosed accounts for the garden and piggery for the year 1856, which I trust will meet with your approval. The work has been performed by the old men I have had in the house, with one able-bodied man, the boys not being taught spade husbandry. Taking into consideration the poor and exhausted state of the ground, I think the return very satisfactory. Having arranged it so that I have made the discharge from the drains of the house available for

manure, I trust to have a still more favourable account to render at the close of the present year. The quantity of land, including the field, is about three acres; average number of men employed during the year has been four.

I have, &c.

J. Ruddock, Esq., (Signed) HENRY PRATS, Master.
Her Majesty's Inspector of Schools.

(Signed) W. H. MAYNE, Industrial Teacher and Superintendent.

GENERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools*, H. G. BOWYER, Esq., *on the* SCHOOLS *of* PAROCHIAL UNIONS *and on the* REFORMATORIES *inspected by him in the* EASTERN *and* MIDLAND DISTRICT.

MY LORDS,

THE last Report which I had the honor to submit to your Lordships embraced the year 1855 and the first quarter of 1856, terminating at Lady Day. I shall therefore take that day as the starting point of this, and, when practicable, of every future yearly record of my official labours; so that the parochial year may form the limit of my General Reports, as it does of the annual certificates awarded to workhouse teachers, and the annual grants by which their salaries, and those of the industrial instructors, are repaid to boards of guardians. I shall thus be enabled to convey a more correct idea of the changes which the character of the certificates issued may show to have taken place, either for the better or for the worse, in the teaching body of workhouse schools. I shall also be able to furnish statistics of the produce and profit derived from the land devoted to the industrial training of boys in workhouse schools, which it has not been in my power to do since the year 1853, owing to the fact that my Reports have been called for before Lady Day, on which day the accounts of almost all school farms are made up. For these reasons I hope that nothing will occur to prevent my taking the parochial year as the limit of all my future Reports. I express this hope more especially with reference to agricultural statistics, as the results of one year's cultivation are not of much value as the basis for estimating the probable produce of a piece of land cultivated by boys, since circumstances may have rendered the land more or less productive than usual. For example, the potato disease, which raged last year on most of the union school farms, reduced their balance far below the average. But a series of annual agricultural reports will afford the means of ascertaining the average productiveness of land tilled by the spade in the hands of boys, not as a main object, but as an accessory to school instruction. At a time when reformatories are rising in every part of the country, such information is of peculiar value, as it is generally agreed that their industrial system should be chiefly based on agriculture; but I do not think that the value of that kind of

Expediency of making period embraced by our annual reports coincide with parochial year.

Statistics of union school farms.

Importance of such statistics with reference to reformatories.

industry, as a source of income to the institution, is appreciated so highly as it deserves to be. I have no hesitation in expressing my conviction, founded on the experience acquired by ten years' inspection of workhouse schools, that the produce of the land cultivated by the inmates of reformatories will go very far towards defraying their current expenses. They will possess, in a financial sense, a great advantage over workhouse schools, inasmuch as their inmates will be, generally, far more valuable labourers than workhouse boys, on account of their greater average age, and will devote more hours in the day to the cultivation of the land than can be done in workhouse schools. If sufficient care be taken to keep down working expenses, and to economise the manure produced on the premises, I do not think I shall be far wrong in setting down the average profits at 10*l.* per acre. These considerations have induced me to issue a circular to all the workhouse schools in my district in which agricultural training is carried out, requesting a balance sheet of last year's cultivation; and, in order to avoid adding to the bulk of this Report by transcribing in extenso the returns which I have received, I have reduced them into a tabular form, which will I think, afford all the information of any practical utility. This table will be found in the Appendix to my Report. (*See Appendix* A.)

My tour of inspection has been somewhat extended this year, for the purpose of inspecting a part of my colleague Mr. Ruddock's district, a protracted indisposition having compelled him to suspend for a time his official duties. The schools which I inspected are situated in Oxfordshire, Buckinghamshire, and Berkshire. I do not consider myself entitled to report upon these schools any further than by the general remark, that they afford abundant evidence of careful and zealous inspection; and especially so by the efficient manner in which industrial training is carried out in them. I shall, however, make an exception in favour of two facts, which I am desirous of bringing to the notice of boards of guardians in my district. The first is, that, Mr. Huthnance, master of the Chipping Norton workhouse, has taken out a patent for an improved economic laundry stove and drying room, which appears to me worthy of general adoption, not only in workhouses and district schools, but also in all public establishments. The details relating to this invention will be found in the Appendix to this Report. (*See Appendix* B.) The second is, that, the schools of industry established by the Oxford and Wycombe unions for the maintenance and education of the children receiving in-door relief, which are entirely disconnected from their respective workhouses, have been placed by the Committee of,

Improved economic laundry stove and drying room.

Oxford Industrial school.

Council and the Poor Law Board on the footing of district schools in regard to the annual payments which they receive from the Parliamentary Grant appropriated to pauper schools.

In the Oxford industrial school the superintendent receives 70*l.* a year; the matron, 30*l.*; the gardener, 30*l.*; the laundress, 15*l.*; and the cook, 12*l.* 12*s.* Adding to this the salaries of three teachers, the annual payments made by the public to the Oxford union for salaries of officers amount to 268*l* 12*s.* per annum. If to this be added the average stipends of two pupil-teachers, and the remuneration paid to the schoolmaster for their instruction (which, though not paid to the union, must be considered as expended for its benefit, since they promote the efficiency of the school), the total annual contribution of the country towards the education and industrial training of the pauper children in the Oxford union amounts to 307*l.* per annum. The Wycombe industrial school, though smaller than the former, affords an equally striking example of the solicitude of the Committee of Council and the Poor Law Board to promote the establishment of schools for pauper children, free from the pauperising influences of workhouse associations. I would fain hope that these examples of the liberality of the State may operate as precedents to the encouragement of boards of guardians to establish separate schools for the children now reared in the workhouse; if not solely for the sake of the moral and social benefits which their constituents will derive from the diminution of pauperism, and the increase of industry and virtue, through an untainted and practical education; at all events, whenever the increase of population, and the sanitary regulation for the prevention of overcrowding recently enforced by the Poor Law Board shall place the alternative before them, either of enlarging the workhouse or of removing the children to a separate establishment. I confess, however, that my recent experience is not such as to inspire confidence. I stated in my last Report that the Wolverhampton board had decided on erecting a separate school for their workhouse children. I regret, however, to be obliged to say, that that decision has been reversed, and that the children are to remain in the workhouse, in which additional accommodation is to be provided for them by a considerable enlargement of the building. I must, however, allow that my regret at what I must conceive to be an error on the part of the board is a good deal mitigated by the measures taken by them at the same time for improving the education and industrial training of the children.

Salaries paid from Parliamentary Grant.

Wycombe Industrial school.

Enlargement of Wolverhampton workhouse.

Repayment of salaries of industrial instructors out of the Parliamentary Grant.

The repayment to the unions of the salaries of industrial instructors, which was authorized by the circular letter dated 7 August 1855, will enable us to improve materially the industrial training afforded in workhouse schools. Owing to an accidental circumstance, I was not authorized to act upon that circular till a considerable time after my colleagues. I am, consequently, rather behindhand in availing myself of it. But I have, nevertheless, had sufficient experience of its working to convince me of its importance for good, so long as it be not applied with too great liberality. The object of that measure is the improvement of the industrial training afforded to pauper children; and, consequently, the industrial instructors contemplated by it are, strictly speaking, only such officers as are appointed for the *purpose* of instructing them in some useful calling. But, in applying it to workhouse schools, cases occur in which it is difficult to ascertain whether industrial instruction is the main business of the officer in question, or only an incident in the performance of his duties originating in mere convenience. In a good many workhouses the shoes and clothing of the inmates have always been made in the house, because it was considered cheaper to do so than to have them made by contract. The person charged with this duty is generally a workman of very humble pretensions, who would, most probably, be an inmate but for that employment; and he is assisted by one or two crippled inmates, formerly of the same trade, and a few boys, to whom the easiest part of the work is assigned. In this workshop are made or repaired the coarse clothing and shoes of the inmates, but no article is attempted which would suit the ordinary customers of a tailor or shoemaker. I am far from undervaluing the utility of even the coarsest work as an instrument of industrial training. But, considering that these workshops were established many years ago by the boards of guardians, on grounds of economy and convenience, and would continue to exist without any assistance from the public, I do not think them proper objects for the application of the Parliamentary grant, except under the condition of an increase in the number of boys trained in them, and an improvement in the quality of the work performed. Unless that condition be made imperative, and its performance be rigidly enforced, that grant will cease *pro tanto* to be an educational grant, and become nothing else but a payment out of the public taxation in aid of the rates. This difficulty, however, vanishes wherever any new workshop is established, and an industrial instructor is appointed in consequence of the proffered repayment of his salary; or where

a separate laundry, dairy, or kitchen is devoted exclusively to the instruction of the girls; as their object can have been no other than the education of the children. The same observation applies to agricultural instructors, as economy alone would have dictated that the children should be set to work under the superintendent of labour, or some inmate.

Changes which have taken place among workhouse teachers.

The number of new appointments has been nearly the same as in the previous year; and, setting those that are an improvement on what previously existed in the same schools against those that are the reverse, the balance is slightly on the favourable side. The number of re-examinations has been unusually large; partly because several teachers had not been re-examined for some years past, but principally by the operation of the alteration which your Lordships have made in the scale of capitation payments. I am happy to be able to say that it has fully attained the object which your Lordships had in view; for it has not only stimulated the teachers to study for an examination, but (what your Lordships justly consider far more important) encouraged them to increased attention to the improvement of their schools, not only in the ordinary subjects of school instruction, but also in industrial knowledge and habits.

Alteration recently made in scale of capitation payments.

Admission of workhouse teachers to Queen's scholarships.

I expressed a hope in my last report [*see* Minutes on Parochial Union Schools, for 1855–6, p. 62] that the opening afforded to workhouse teachers, with certificates of competency and efficiency, for obtaining a Queen's scholarship without examination, by a three years' good service in the same workhouse school, would attract to this department of elementary education some of the pupil-teachers in non-pauper schools who were unsuccessful in the Christmas examination for Queen's scholarships, or had been prevented by circumstances from attending the examination. I cannot say, however, that the experience of the past year has justified that hope. It may be, that the repugnance felt by teachers to service in a workhouse overbalances the temptation of obtaining a Queen's scholarship on such easy terms; but I am more inclined to attribute the failure of my anticipations thus far to their not being aware of the possibility of so doing, as the letter of your Lordships' Secretary, announcing it, has only been published in the volume of Union School Reports, which is not distributed to elementary schools unconnected with the Poor Law. I may be permitted to express a hope that means will be taken to make that letter more extensively known. Workhouse schools would be greatly benefited by the services of this class of teachers, who are very superior, both in knowledge and in power of teaching, to the generality of the candidates that

answer the advertisements. And I am persuaded that the experience which the young persons themselves will acquire by three years' service in a workhouse school will be useful to them in after life, whatever class of school they may afterwards be entrusted with. My anticipation that the expectation of earning a Queen's scholarship by the means held out in that letter would tend to keep restless young teachers in the same school, has been fully realized.

I have now touched upon all the most salient points of my inspection of workhouse schools in the course of the past year. To enter into more minute details of the slight and fleeting changes which take place from year to year in the schools under my inspection would be of no practical use. One school may improve, owing to the appointment of a good teacher; another may be injured or ruined by an opposite cause. One county may be more favoured in the lottery of appointments than another. But no conclusion could be drawn from events which cannot be traced to the operation of any fixed cause; and no fact from which a conclusion cannot be drawn deserves a place in an official report. While the general conditions which govern the problem of pauper education remain mainly such as they were established by the Act which reformed the Poor Laws, it is futile to expect any more satisfactory solution of it than has been attained through the unceasing efforts of two departments of Government, and the expenditure of considerable sums of the public money. Much has been, doubtless, thus effected, in concurrence with the improvement which has taken place during the same period in the feeling of boards of guardians on the subject of education, both moral and industrial; and it is impossible not to view with satisfaction the results of this education in many workhouses in which a fortunate concurrence of circumstances neutralizes the moral evils inseparable from such a place. But so long as the children are dispersed among 724* workhouse schools, requiring 389 schoolmasters and 494 schoolmistresses; and of these schools only 25 have more than 100 children each, only 30 between 75 and 100, only 101 between 50 and 75, while the enormous number of 568 contain less than 50 children; it is quite impossible that the supply of competent teachers should at all approach to equality with the demand. And, so long as these schools continue to form part of the workhouses, the insufficiency of the supply will be aggravated by the aversion of

General reflections on present state of workhouse education.

* These statistics are taken from a letter addressed by the Committee of Council on Education to the Poor Law Board, and dated 15 June 1852; but, though old, they are sufficiently in accordance with the present state of workhouse schools to illustrate my argument.

teachers to the position and the duties of a workhouse schoolmaster. This feeling or prejudice on the part of the community of teachers throughout the country has not exhibited any signs of diminution during the past year. Many cases have occurred in which boards of guardians have advertised repeatedly without success, and been obliged at length to elect a person whom they knew to be incompetent, because there was no other alternative. In one instance, a board dismissed their schoolmaster on account of his gross neglect of his duties, and, after several unsuccessful attempts to fill the vacancy by election, were obliged to reappoint the teacher whom they had dismissed. The constant elections of school masters and mistresses are still, as hitherto, a source of trouble and annoyance to boards of guardians, and the incompetency of the persons whom necessity compels them to appoint is as great as ever. Of this, a remarkable instance came recently under my notice. The school in which it occurred was a small one, but it had the good fortune of possessing, for several years, very efficient schoolmasters; and the boys' school has, consequently, been a remarkably good one. These good masters were, however, succeeded by a series of incompetent ones. The mistresses have always been bad during the ten years in which I have inspected the school. The last mistress examined there was entirely unacquainted with arithmetic. Of the master's attainments, the following specimen of his examination papers will suffice to give an idea. The question was—"Explain the meaning and derivation of the following words." I subjoin the words, with his explanations of their meanings:—

"Construction"	"A person instructed."
"Salubrity"	"Foul."
"Antichrist"	(*Not answered.*)
"Antecedent"	"A noun."
"Collateral"	(*Not answered.*)
"Dislocate"	"To put out of joint."
"Innocuous"	"Bitter."
"Interpose"	"To console."

I must add that this person was by profession a schoolmaster, and had been for some years in charge of a National school. To persons who have not occasion to examine teachers belonging to the class of village schoolmasters whose schools are not under Government inspection, it may perhaps appear almost as strange that such simple questions should be put to a professed instructor of youth, as that they should have been so imperfectly answered. But I think that most of my colleagues will bear me out in saying that these and similar questions have proved a stumblingblock to not a few indi-

viduals of that class; and that a vocabulary of the words whose meaning is within the knowledge of the ordinary village schoolmaster and mistress would be an exceedingly small one, and would afford small assistance to the well-known "intelligent foreigner," if he were desirous of studying the English language.

District schools.

I have so fully explained, in my previous annual reports, the measures which ought, in my opinion, to be adopted by the Legislature, if it be desired that the existing Acts on the subject of district schools shall be anything but a dead letter, unless under exceptional circumstances, that it would be inexcusable in me to trespass on your Lordships' indulgence by any further observations on the subject. I may, however, be permitted to state that I have not altered my opinion of the expediency of consolidating the existing pauper schools, whether as district schools, or as industrial schools, like those belonging to the Oxford, Wycombe, Hartismere, Liverpool, and Manchester unions, to which neighbouring unions should send the children from their workhouses; though I cannot conceal from myself that every year that passes without some steps being taken in this direction raises new obstacles in the way of the improvement which I desire, in the shape of new schoolrooms, new dormitories for children added to workhouses, or entire new workhouses built for children and adults. I shall abstain from making any further observations on this subject; but the confirmation afforded to my opinions by the authority of one of the most experienced and able among the Poor Law Inspectors is too valuable to me to be passed by. I shall, therefore, conclude with the following emphatic statement of Sir John Walsham, extracted from his Report for 1855, addressed to the Poor Law Board:—

Opinion of Sir John Walsham, Poor Law Inspector.

"Nothing whatever has been done towards the establishment of district schools among the unions under my superintendence; and I consider that all attempts to induce the guardians of those unions to promote the formation of school-districts will, as heretofore, be perfectly useless, so long as that formation depends exclusively on their consent, and so long as powers analogous to those vested in the Poor Law Commissioners, by the 4th and 5th Will. 4. c. 76. s. 26., for the organization of unions, are not available for the organization of school districts. I sincerely wish that those powers could be obtained from the Legislature; for until the bulk of the children brought up in workhouse schools can be educated in separate establishments, and removed altogether from the debilitating influence of workhouse associations, the reports of the 'stagnant dulness of workhouse education' which annually proceed from Her Majesty's Inspectors of Schools must continue to be more and more discouraging."

Reformatories.

Reformatories in my district.

This class of schools was under the inspection of Her Majesty's Inspectors of non-pauper elementary schools until the circular letter of your Lordships' Secretary, dated July 1856, transferred them to the superintendence of those of Her Majesty's Inspectors who are charged with the inspection of workhouse schools. The reformatories referred to me for inspection in consequence of that circular are the following.—The Horndon reformatory, in Suffolk; the Marsham reformatory, in Norfolk; the Saltley reformatory, near Birmingham; and the Birmingham girls' reformatory; the Peccleton House reformatory, in Leicestershire, and the Tiffield reformatory, instituted by the Northamptonshire Society for promoting and extending Education. In order to convey an accurate idea of the reformatory movement in my district, I will add that the Staffordshire Reformatory Society has commenced the erection of one near Stafford; that the Warwickshire Reformatory Society has opened one near Leamington, not as yet assisted by your Lordships' grants; and that the Monks of the Order of St. Bernard have one in operation in Leicestershire. Of the last two I have no official knowledge. I have only visited one of these institutions for the purpose of determining the annual grants; viz., that of the Northamptonshire Society, as the months fixed upon for that purpose have not yet arrived with regard to the others on my list. I have visited, for the purpose of simple inspection, the Peccleton reformatory, and attended the last inspection of the Saltley reformatory by my colleague, the Rev. H. W. Bellairs.

Difficulty of forming correct opinion on state of a reformatory.

Under these circumstances it would be premature in me to offer any opinion on the working of the reformatories in my district, and I am deeply sensible of the difficulty of forming one which I could, with any confidence, report to your Lordships, without greater knowledge of the subject than I can hope to acquire before several years of attentive observation. In fact, no opinion relative to the actual work of reformation effected in any of these establishments can be much more than a conjecture, if grounded solely on the impression produced in the mind of the Inspectors. The instruction, both religious and secular, the industrial training, the general management of the institution, may be outwardly unexceptionable. The officers may appear exemplary in their moral qualifications and their devotedness to their duties; and yet it is obvious to any person who has noted the tendency exhibited by all institutions, and especially those whose objects are the highest, to conceal their shortcomings, and to appear all the more perfect the less they are conscious of being so, that all those fair appear-

ances may possibly cover a far different reality. There is, indeed, room for a similar doubt, to some extent, in inspecting any common school; for though it is possible to ascertain, with sufficient accuracy, the amount of positive knowledge, religious and secular, imparted to the children, it is more difficult to assure oneself that the moral tone of the school is as genuine as it is apparent. But the materials on which the moral agencies of the school are brought to bear are children, most of whom may fairly be presumed to have more virtuous tendencies than evil ones, as it is only on such a hypothesis that the existence of civilized society, with its manifold temptations and multitude of tempted, can be at all explained. The object of these schools is to improve natures assumed to be already more virtuous than vicious, and also to prepare them for the duties and occupations of life. There is nothing so arduous in such an undertaking as to justify doubts of its having been fairly, if not completely, accomplished, when all outward appearances tend to impress the mind of the inspector with the conviction that it has been so. It is far otherwise in the case of a reformatory. Here the presumption with regard to the children is, that their tendencies are more vicious than virtuous; and, indeed, considerably more so, as only children who are believed to be otherwise irreclaimable, are sent to these institutions. In them, therefore, the moral agencies of the school are all important, and the positive instruction and training imparted to the children can only be considered free from danger to society on the assumption that those moral agencies have triumphed, and converted vicious into virtuous natures. Should this assumption not prove correct, the only result of the education imparted in a reformatory will be to expand and invigorate the intellects, and extend the knowledge of the dangerous classes. To watch the involuntary, and generally momentary, workings of the countenance, which betray the real mind within, or the more permanent marks impressed on it by previous habits of thought and action still rooted in the character, and thus to discover to what extent the moral agencies of the school have succeeded in the work of reformation, must be the inspector's principal object while apparently occupied in ascertaining what the inmates have been taught, and how they have been trained to industry. Now this is no easy task under any circumstances, but its difficulty is greatly increased when the minds to be probed are those of children and youths whose previous lives have trained them to command their countenances, and mould them to any expression which may suit their purpose, and who are bent upon making a favourable impression on the

Government Inspector and on the members of the committee present at the examination. It is, consequently impossible to place implicit confidence in favourable impressions, though a real feeling of shame and religion may often be read in the countenances of many of the younger inmates. Where, on the other hand, the result of the inspection leaves an unfavourable impression, greater reliance may be placed on its correctness; as whatever blemishes may appear must have been involuntarily betrayed. If the characteristic expression of the criminal class is still perceived to pierce in momentary gleams through the staid and demure countenance, it may be confidently concluded that no real reformation has been effected. In the course of my experience of workhouse schools, which are composed of children somewhat analogous to those belonging to the criminal class, I have invariably found the countenance an index to the character.

Difficulty of reforming juvenile criminals somewhat underrated.

I am, however, very far from doubting the possibility of reforming a considerable proportion of our juvenile criminals. This has been established beyond controversy, both in England and on the Continent. But I am inclined to think that the difficulty of the undertaking has been somewhat underrated by many of the promoters of reformatories. There is no doubt that these institutions will, even if imperfectly conducted, effect a considerable amount of good. A large proportion of the juvenile criminals are children who have been impelled by want, persuasion, evil example, or even thoughtlessness, to commit petty larcenies, which, had their perpetrators belonged to the middle and upper classes, would have been visited only with domestic correction. But their dispositions are not really worse than those of most children; and the mere refuge afforded to them by the reformatory from the temptations which occasioned their fall, together with the regular life they lead in it, the religious and secular instruction, the industrial training it affords them, and the employment which the benevolent care of the managers procures for them when they leave it, can hardly fail to render them respectable members of society. This result, however, falls far below the object which the promoters of reformatories have in view, and the expectations which induced the country to support them by annual grants of the public money. The great social evil which has called the reformatory movement into existence, and the removal of which forms its principal aim, is a class of children who are born, bred, and trained to crime as to the calling by which they are to live. They are the rising generation of the caste of professional criminals, whom society does not know how to reform, can no longer banish, and dares not exterminate.

A large proportion of juvenile criminals not naturally worse disposed than other children.

Real class of children for whom reformatories are needed.

It seems to be believed that the young of this caste can be converted into average, and even exemplary, members of society by daily instruction in Scripture, reading, writing, and arithmetic, regular hours of work, a life of decent seclusion, and morning and evening prayers, read by the superintendent or the chaplain; all this administered by the watchful care of a steady respectable man, practically acquainted with agriculture and some other trade, while his equally steady and respectable wife performs the duties of matron. This belief is surely at variance with both theory and experience. It is not credible that a few years passed under the influence of such ordinary mental and bodily discipline can overbalance the effects of a previous life which, though brief in comparison to that ordinarily allotted to man, has produced a soul thickly sown with the seeds of evil, and cultivated by criminal parents, friends, and associates, with all the sagacity, the practised skill, and the ardent zeal with which wickedness pursues its ends; so that its soil is unfitted for bearing any but evil fruit, and is rendered so fertile of evil that it bears that fruit, reversing the sacred parable, some thirty-fold, some sixty-fold, and some an hundred-fold! To drain this mental soil of its impurities is no easy task. It requires, in him who would successfully undertake it, the exercise of the same faculties of the mind as have been employed for the purpose of corruption; and others besides of a far higher and purer character. It calls for a sagacity as unerring, a skill as consummate, a zeal as ardent, and a knowledge of human nature far more profound. It calls, further, for the rarest qualities of the soul; entire forgetfulness of self, singleness of mind, simplicity, and that compassionate love which is not an amiable weakness, but a power, strengthening and animating all the other faculties, and working irresistibly by sympathy on the hearts of those towards whom it is directed. Nor is this theory unconfirmed by experience. I need only mention, in support of my assertion, the Mettray and Ruysselede institutions, the Rauhe Haus, the Red Hill and Hardwick reformatories. Those who founded these institutions were not ordinary respectable and well-intentioned men, but men who are among the choicest fruits of Christianity.

Qualities required for reforming them.

If this opinion be correct, if such be the qualities requisite for the head, or the schoolmaster and mistress of a reformatory, the serious question presents itself—how a sufficient supply of persons thus qualified is to be procured? It is obvious that they cannot be common; and it is, I think, to be feared that they will be inconveniently rare, unless their production be promoted by the formation of a religious order or confrater-

Difficulty of procuring sufficient supply of persons thus qualified. Necessity of doing so.

nity, devoted to that particular work. Such orders have been formed with admirable results in Protestant Germany, but the attempts made to introduce them into England have not hitherto succeeded. The obstacles which stand in the way of the application of the principle of association (so congenial to the English character in every other department of human activity) to religious purposes, are not difficult to be perceived by any person acquainted with our religious history since the Reformation. But this would not be the proper place to point them out. I shall confine myself to stating my conviction that this source of supply is not one that is open to us. Some means must, however, be devised to obtain a sufficient number of men qualified for this arduous and important work; for on this depends the success of the undertaking. Without them all the money expended on reformatories, and all the care bestowed on them, will be thrown away. So impressed was Monsieur de Metz with this truth, that he devoted several years previously to commencing the establishment of his reformatory, exclusively to training an efficient staff of teachers.

Minute dated 2 June 1856, relating to Reformatories.

The Minute of the Committee of Council, dated 2 June 1856, attests the importance attached by your Lordships to this question. The fourth article of that Minute grants—

"The sum of 35*l.* to the treasurer of any reformatory school, in respect of every person qualified as next under-mentioned, who shall have been boarded, lodged, and trained as a master in such reformatory school during a period of twelve months, viz.:

"(*a*) All teachers of common elementary day schools holding certificates of merit, or registered.

"(*b*) All teachers of workhouse schools holding certificates of efficiency.

"(*c*) All students in normal colleges under inspection, who shall have resided therein not less than one year, and shall have successfully passed the examination at the end of the year before Her Majesty's Inspectors of Schools."

The principles on which these provisions are grounded are unquestionably sound. They are:—

1. That the reformatory itself is the best place to train a reformatory schoolmaster.

2. That a candidate for that appointment ought to bring to it a mind previously cultivated by a superior education.

Expemental character of this Minute.

The application of these principles, however, to the state of things at present existing is (like all your Lordships' measures for the promotion of reformatories) avowedly experimental. I trust, therefore, that I shall not be deemed to abuse the freedom which your Lordships' indulgence has hitherto allowed to your inspectors, in expressing their opinions on the effects of the measures adopted by you, if I venture to offer a few observations on this subject.

Its probable results. Reasons for doubting its success.

I fear that very few, if any, certificated teachers or students in normal colleges [(*a*) and (*c*)] who have obtained a place on the class-list will undergo a year's training in order to bestow their services on reformatories, unless they be of such size and importance as to render the situation of superintendent, or head schoolmaster, an object of ambition to them, both in a pecuniary and in a social sense. If the prejudice against the situation of workhouse teacher is so strong among the better class of elementary teachers and students in training colleges, that it was found necessary, at the Kneller Hall Training College, to bind the students by a pledge to serve for seven years in a workhouse, and this liability occasioned the failure of that institution, notwithstanding the superior pecuniary inducements held out for the purpose of attracting students to it,—how much stronger must their prejudice be against the situation of a reformatory schoolmaster, or even that of superintendent of an ordinary reformatory containing twenty-five, thirty, or forty boys? The prejudices of the English people are extremely strong; and the status of a teacher will always depend, in his own estimation and that of others, on that of his pupils. Notwithstanding the many estimable qualities of our trained elementary teachers, I do not think that they are exempt from the less amiable peculiarities of our national character. And, indeed, the sacrifice of *amour propre* which they must make, in order to devote themselves to this branch of their profession, is very considerable. They must not only descend from the high place they have won for themselves among their fellow teachers, to a level below that of the untrained village schoolmaster or the pauper schoolmaster; but they must put aside, as a useless, and even a forbidden, department of instruction, the greater part of what they have learned, with so much labour, in the training college, and on the acquisition of which they most prided themselves. The following extract from the circular letter on the subject of reformatories, dated July 1856, will show the standard of attainments required for teachers in those establishments:—

"The literary ability of a teacher may be regarded as sufficient if the inspector is satisfied that the boys under his charge learn to read, write, and cipher in such a manner as to acquire the practical command of those arts in earning their bread, and making their way in the world. In the same way, as to religious knowledge, you should endeavour to ascertain that the doctrines and maxims of Christianity are taught in such a manner as to be likely to become motives and rules of conduct."

This standard is considerably below that of a workhouse teacher possessing a certificate of competency; and a glance at the syllabus of studies drawn up by the Rev. Canon Moseley for training institutions, and the papers for the

Christmas examinations, will enable your Lordships to estimate the sacrifice of self-esteem which a young certificated teacher or student must make, in order to become a teacher in a reformatory, and the enormous disproportion between the knowledge imparted to him and what he will then be permitted to teach. To this must be added, a life of more constant labour and more complete seclusion than that of a workhouse schoolmaster, and, at least, equal occasions of disagreement with the superintendent and matron. Similar, though less powerful, causes will, I fear, prevent most workhouse teachers with certificates of efficiency from undergoing a year's training for the purpose of obtaining employment in a reformatory, unless induced to do so by the offer of an increased salary, which is not probable, since they now receive between 50*l.* and 60*l.* For these reasons, I entertain very slight expectations of a supply of qualified teachers through the operation of that Minute. It remains to be considered whether there be any other means of attaining the object in view. I venture to think that such means exist; and I shall state, as briefly as possible, what I conceive them to be.

Other means by which object in view might be attained.

The first reflection that presents itself to the mind, in considering this question, is the following:—

1. Instead of attempting to create a supply of suitable teachers, sufficient for a considerable number of small reformatories, by any artificial stimulus, the demand might be rendered proportionate to the supply by consolidating the present large number of small reformatories into a lesser number of large ones.

From this reflection springs another:—

2. These large reformatories might be made the means of training a staff of teachers, by incorporating with each of them a training college organized with an especial view to the work for which the students are intended.

It appears to me that these two ideas embrace the only satisfactory solution of the problem.

Probable number of juvenile criminals for whom reformatories are required.

1. I have attempted to follow up this idea into its practical application, but have been arrested *in limine* by the impossibility of forming a correct estimate of the number of children in England and Wales for whom reformatory education is required. The tabular statement of the number of criminal offenders issued by the Home Office affords no means of obtaining this information, as it does not state the ages of the criminals; and I have not been able to obtain any reliable statistics from other sources. The only fact which I can state with confidence is, that the number of juvenile offenders (aged sixteen years and under) committed summarily, or for trial, in

the twelve months ending on the 29th of September 1856, was 11,808 males and 2,173 females, making a total of 13,981. Supposing the proportion of the acquitted to the convicted to be the same among juvenile criminals as among those of all ages, which was 22·9 of the former to 77·1 of the latter (*see* Tables of Criminal Offenders for 1855, p. 5), there would be about 10,780 undergoing punishment. But, in order to secure myself against the possibility of over estimating, I will reduce this number to 8,000. I am aware that many of these would not be sent to a reformatory; but against them may be set a number of children, not convicted of crime, but sent there by their parents. How far these would make up for the absence of the former, I have no means of judging; but it may be assumed with tolerable safety, that the tendency of magistrates will be to send a juvenile offender, especially if ignorant (which he almost is sure to be), to a reformatory, whenever it is possible to do so, and that, consequently, the number 8,000 may be accepted as approximately correct. As two years is the shortest period for which children can be sent to a reformatory, the whole 8,000 will be inmates of those establishments at the end of the year. To these must be added a number of inmates admitted in previous years, whose sentence has not yet expired. These may, I think, be set down (according to a calculation made by the Northamptonshire Educational Society for that county) as probably amounting to 5,000. We thus have a total of 13,000 children to be provided for in reformatories. This number would require 325 separate establishments, such as are now rising all over the country, assuming them all to reach 40 inmates each, which appears to be almost universally the contemplated maximum. As each reformatory must have a superintendent and matron, a schoolmaster and assistant, the number of officers possessing peculiar and rare qualifications that society will be required to furnish will be 1,300. I am sensible that this calculation is a very rough one; but, making every reasonable abatement in it for possible overestimation, enough will remain to bear me out in saying that, how to procure a sufficient staff of competent officers constitutes the great difficulty which the reformatory movement, as at present directed, will have to encounter.

Probable number of reformatories (according to present scale) requisite for this number of children.

I will now suppose that these 325 small reformatories are consolidated, so that each should constitute a *family*, according to the organization adopted at the Mettray Reformatory, and become a part of a larger establishment. Ten of them would form an aggregate of 400 children, living in ten distinct cottages grouped round a chapel, and governed by a superintendent and matron, four head schoolmasters, and twelve

Number of reformatories requisite if those now existing be consolidated and organized on Mettray system.

assistant teachers. Thus it would require no more than thirty-two of these establishments to perform all the work of the 325, which would occasion a saving of 293 superintendents and the same number of matrons. The number of head schoolmasters would be 128 instead of 325, showing a saving of 197. Against these savings there is only to be set a slight excess in the number of assistant teachers, namely 384 against 325. I need only point out the importance of this organization in a financial point of view. It is obvious that, while the salaries of the officers might be increased, the reduction of their number would occasion a very considerable saving, both to the public purse and to subscribers. I pass to the more important consideration of its efficiency as an instrument of reformation. While it would be utterly impossible to find 325 persons qualified for the arduous duties of superintendent, it would be easy to procure thirty-two men realizing the following description by the pen of the Rev. Sidney Turner :—

Advantages of proposed consolidation.

Greater facility which this consolidation would afford for procuring qualified superintendents and teachers.

"You want a religious man. I mean, a man who takes up his work as a mission,—something given to him by God,—something in which he is responsible, not only for the *means* he uses or the *methods* he pursues, but for the *results* he attains to. Such a man views his work as one which he *cannot, dare not* leave, just to get more salary, leisure, less worry, or more less confinement. Such a man conducts his work in the spirit and by the instruments of the missionary. Not only teaching, but praying; not only admonishing and advising, but giving the daily example of patience, kindness, industry, endurance, and devotion in his personal life. Before such men the stubborn tempers bend, the hard hearts soften, the idols of vice and crime are cast down. They need not be men of extraordinary talent, but they must be men of earnestness, love, and a sound mind."

These qualities, though here attributed to the head schoolmaster, are quite as necessary for the superintendent, whose spirit ought to animate the whole establishment, and rule by moral ascendency over his subordinates. Similarly, while it would be vain to expect 325 head masters at all approaching this standard, it would be easy to find thirty-two fully attaining it. The 384 assistant teachers would be in great measure furnished by the more advanced students under training. These should commence their course from an early age, and pursue it for four or five years, after which they should, if found suited to their work, be promoted to the post of assistant master. By developing the principle of the Mettray Elder Brothers, I believe that excellent masters might be recruited from among the inmates themselves. Such men might be expected to devote themselves to their holy calling with an ardour and self-abnegation far exceeding that which would be found in any other class.

2. I now proceed to consider the reformatory as a training institution for furnishing reformatory teachers. The superiority,

Proposed reformatories considered as training institutions.

in this point of view, of a large establishment, organized as above described, over the present small reformatories of twenty-five, thirty, or forty inmates, is so evident that I hardly think it necessary to prove it. Instead of being cut off from all communication with their fellow students, and confined to the society of an ordinary superintendent, his wife, and a schoolmaster, with occasional visits from the visiting committee, he would be encouraged and strengthened by the society of his fellow students; and his character would be moulded and disciplined by the control and example of his teachers, the watchful care of the superintendent, collective lessons and discussions, the daily observation or exercise of the duties of his future calling, common prayer in the chapel, and the exhortations of the superintendent, if a clergyman (which I would strongly recommend that he should be), or of the chaplain. Thus, and thus alone, can he be fully armed for the high and holy mission he aspires to.

Objection to proposed plan.

Characteristics of popular movements.

Right of State to direct and control this movement.

It will be objected to my plan that the comprehensive survey of the work to be done, the combination and concentration of efforts which are requisite for its realization, are not compatible with the spontaneous and local development of a popular movement, such as that by which reformatories are rising in every part of the country. This I freely acknowledge. I value as highly as any man the animation, the earnestness, and the manly tone of independence which are developed by any popular movement for a good object; but these advantages are purchased by a considerable sacrifice of forethought, comprehensiveness, and combination. It must however be remembered that voluntary action, vigorous and sanguine as it is, has not been able to carry out its object without assistance from the State, and that, consequently, its feelings of independence from central control should be considerably qualified by the consciousness of this fact. Were, indeed, the State to withdraw that assistance, very few of the existing reformatories could be supported; and as the lapse of time, together with the rise of other social movements, shall abate the interest now felt in the reformation of criminals, those institutions will inevitably become still more dependent on the public purse. It is difficult, therefore, even on purely financial grounds, to place any limit on the control which the State is bound to exercise over institutions thus sustained in order that the public money may not be unprofitably expended. But the claim of the State to exercise a higher influence over the work of reformation than that of a mere paymaster rests upon far higher grounds than these. Crime is as truly a national as a local evil, and to repress it has been always considered the first

duty of the supreme power. The enforced abandonment of transportation has so greatly increased the difficulty of effectually performing that duty, that the adoption of preventive means, formerly considered to belong to the domain of individual action, has become a public question of pressing urgency. As the stream of crime can no longer be diverted to the antipodes, public safety requires that measures should be taken to cut it off at its source. This operation is too important to the whole country to be delegated to private benevolence and local authority. The consequences that would result to the whole community from its failure are too serious to justify its being undertaken without that comprehensive view of its extent, and mature deliberation as to its execution, which can alone inspire a well founded confidence of success. If, after a full trial of the present tentative and desultory efforts, it should be discovered that crime was as rife as ever, or even that it was only slightly and insufficiently abated, the evil of such a consummation would not be limited by the extent of the failure. The confidence of the public in the efficacy of moral agencies for the extirpation of social corruptions, which is the most hopeful characteristic of these times, would be rudely shaken, and a reaction would take place in favour of an increased severity of repression, as the only way of dealing with the dangerous classes. At the same time the face of the country would be so thickly studded with reformatory societies and reformatory institutions, fostered by the pecuniary assistance afforded to them by the State, that the introduction of a better organization would be attended with far greater difficulties than it will have to encounter at present, when the ground is comparatively clear, and the public in earnest on the subject.

Example offered, by Poor Law administration, of harmonious combination of local action and central control.

There is, fortunately, nothing novel in the combination of local action and central supervision for the attainment of important social reforms. The present administration of the Poor Law offers us, probably, the most perfect example of the way in which those two essential elements of well-ordered liberty can be blended together, without either being absorbed in the other, and brought to bear, with compound force and entire success, upon one of the most menacing evils with which a nation can be afflicted. The very antagonism which must exist between them prevents the development of the defects to which each of them is naturally subject, and lends new vigour to their healthful action. Neither of them could alone have raised the secure, and yet not too rigid, barrier which now protects society from the encroachments of pauperism;

yet each of them exhibits, in triumphant union with the other, its peculiar excellencies in their freest development. It must, however, not be forgotten that the foundation of the whole system was the power given by the Poor Law Reform Act to the central authority to combine parishes into unions. Without this power the mutual jealousies and divergent interests of parishes would have prevented the formation of all but a very few unions, and thus rendered the whole scheme abortive. A similar power is equally essential to the execution of the plan which I venture to propose. I do not expect that many counties will voluntarily enter into combinations for the purpose of erecting a reformatory on the Mettray plan. Each county will set its ambition upon having a reformatory of its own, and will be predisposed to reject any proposals of union which may come from neighbouring counties. But the authority of the legislature will bear down all opposition; and I cannot but believe that the full discussion which the whole question of the reformation of criminals must receive in Parliament before such a power is granted to the executive will establish so conclusively the necessity of that power, that its exercise will meet with very general acceptance. The unions of counties, or parts of counties, being thus formed, powers of investigation and inspection analogous to those exercised by the Poor Law Inspectors might be conferred on the inspectors of reformatories; but I do not think that these powers need be as extensive as in the former case.

Power to be given to Government to form unions for reformatory purposes.

The local portion of the Poor Law organization affords an equally useful guidance in framing the corresponding portion of this scheme. The precarious resources of voluntary contributions should be entirely discarded; and the cost of erecting as well as supporting the reformatories should be defrayed by the reformatory union, as that of erecting workhouses, and the expenses technically denominated the establishment charges are defrayed by the Poor Law unions; while the maintenance of the inmates would fall on the counties in which their conviction took place, in the same manner as that of the inmates of a workhouse falls on the parishes in which they have their settlement. Similarly the State should facilitate the erection of reformatories as it does that of workhouses, by advancing the required capital on easy terms, and repay to the unions the salaries of the teachers and industrial instructors out of the educational grant, on the condition of annual inspection by the officers of the Committee of Council on Education.

Proposed plan (in imitation of Poor Law administration) for erection of reformatories, support of their establishments, and maintenance of their inmates.

In submitting to your Lordships these results of my reflec-

tions on the subject of the reformation of criminals, I am sensible that I have omitted many details which are well worthy of consideration, and far from completely traced the outline of the most important features of my scheme. But to do more than I have done would have been unnecessary, considering whom I have the honor to address; and I am far more apprehensive of needing indulgence on account of what I have written than what I have omitted.

I have the honor to be, &c.

H. G. Bowyer.

To the Right Honorable
The Lords of the Committee of Council on Education.

Appendix A.

Summary of Balance Sheets on account of Land cultivated by Boys in Workhouses; for Parochial Year ended Lady Day 1857.

Name of School.	Extent of Land under Cultivation.	Average No. of Labourers employed.		Crops grown.	Live Stock kept.	Rent, Tithe, and Rates.	Working Expenses and Stock. Total.	Produce and Stock. Total.	Profit. Total.
		Boys.	Men, if any.						
	A. R. P.					£ s. d.	£ s. d.	£ s. d.	£ s. d.

Appendix B.

Huthnance's Patent and Improved Economic Laundry Stove and Drying Room, proportioned to suit Public Institutions and Private Dwellings.

The stove presents the following important advantages :—

1. The simplicity of its construction, the facility and ease with which it can be attached to any room, and the comparative cheapness with which it can be erected.

2. It becomes self-acting as soon as the fire is lighted.

3. It economises fuel, inasmuch as the fire necessary to heat the irons for the use of the laundry likewise dries the clothes; and when the stove is not required for laundry use, it is invaluable as a hot plate for other domestic purposes.

4. The top of the stove (on which the flat-irons are heated) is cast in separate parts, so as to allow for expansion; there is, therefore, no chance of its getting out of order; and to prevent the possibility of accident from the action of the fire, the heating tubes are covered with a non-conducting material, the ends of which are secured in iron plates.

5. The arrangement of the drying room is such, that the admission of dust or dirt of any kind is entirely prevented, and by a system of ventilating apertures, the steam damp is readily carried off, and the clothes purified (while the colour and fibre remains uninjured) during the process of drying, which is of the utmost importance.

9. The drying room may likewise be used as a convenient, inexpensive, and safe place for airing beds, beading, &c.

It is therefore obvious that this arrangement entirely removes the annoyance, inconvenience, and great expense of domestic washing and ironing; while to public establishments, it is not only economical, but, in a sanitary point of view, inestimable.

Sir, *Chipping Norton*, 15 *August* 1855.

I am directed by the Board of Guardians of the union, in answer to your application to them for an expression of their opinion upon your patent laundry now in use in this workhouse, to say that it appears to act admirably in every respect, especially as regards economy and cleanliness, and that in their opinion it is a very valuable invention, and particularly suited to all large establishments, as well as for private families.

I am, &c.

Mr. R. P. Huthnance, Chipping Norton. (Signed) A. L. Rawlinson, Clerk of the Union.

Chipping Norton Union Workhouse, 15 *August* 1855.

At a meeting of the Board of Guardians held this day, a vote of thanks to Mr. Huthnance was proposed and carried unanimously, for his ingenious and useful invention, and for erecting for the use of the union workhouse his patent laundry stove and drying room, which, after a minute inspection and a trial, appears to answer the purpose required in every respect.

(Signed) A. L. Rawlinson, Clerk to the Board of Guardians.

Board Room, Union Workhouse, Chipping Norton, 15 *August* 1855.

I have much pleasure in bearing testimony to the merits of Mr. Huthnance's patent drying room; for economy, simplicity, convenience, and cleanliness, I think it cannot be surpassed, and in a sanitary point of view most valuable to this establishment.

(Signed) John Farwell, Surgeon to the Union Workhouse.

SIR, *West Bromwich*, 23 *October* 1855.

HAVING inspected your patent laundry stove and drying room, I have much pleasure in stating that I consider it a very ingenious and useful invention. I have nowhere seen anything of the kind so economical and convenient, and I have no hesitation in saying that it must afford great comfort in any establishment where it may be erected. I have adopted your apparatus for the new workhouse at Dudley.

I am, &c.

Mr. R. P. Huthnance, (Signed) G. B. NICHOLS, Architect.
Chipping Norton.

SIR, *No.* 329 *Bradford Street, Birmingham*, 25 *October* 1855.

HAVING inspected the drying apparatus patented by you, we are of opinion the same is simple in its arrangement, economical in the consumption of fuel required for heating, and efficacious in its results. We purpose applying the same to the washhouses and laundries in connection with a workhouse for 600 inmates, about to be erected under our superintendence for the Guardians of the West Bromwich union.

We are, &c.

To Mr. R. P. Huthnance, (Signed) BRIGGS and EVERAL, Architects.
Chipping Norton.

SIR, 3 *New Street, Worcester*, 5 *November* 1855.

I CONSIDER your patent drying and heating apparatus for cleanliness, convenience, and economy of fuel decidedly the best yet invented, and capable of the greatest extension, and may be applied to all kinds of public buildings with the greatest safety. To private families it will likewise be a great boon, and rendered doubly valuable from its ease of management.

I am, &c.

Mr. R. P. Huthnance, (Signed) J. W. DAVIS, Architect.
Chipping Norton.

MR. HUTHNANCE, *Winslow*, 27 *May* 1856.

IN reply to your letter of the 24th instant, which reached me here this day, and in which you ask my testimony as to the efficiency of your patent laundry stove and drying room, I have much pleasure in stating that I consider it to be so useful, convenient, and economical an invention—in all cases where a large quantity of linen is required to be regularly and periodically washed—that I never fail to recommend its adoption in the various workhouses under my inspection.

I consider it to be superior to the drying closets often set up in gaols, hospitals, and other public establishments in the following important points:—

1.—It more effectually economises the heat supplied.

2.—It affords more space for the hanging and drying of sheets, blankets, &c.

3.—It is of simple construction, and less likely to get out of repair.

It is not a week since I saw that lately erected by you in the Banbury workhouse; the master and matron of the workhouse, and the guardians generally, express their entire satisfaction with the result, and considered the outlay a very judicious one.

I am, &c.

Mr. Huthnance, (Signed) GRENVILLE PIGOTT,
Chipping Norton. Poor Law Inspector.

Sibford School, 27*th of* 4*th Month*, 1855.

A LAUNDRY stove and drying room having been constructed, under the direction of Richard P. Huthnance, at the "Friends' Agricultural School," at Sibford, Oxfordshire;

It is hereby certified that the result has fully realized the sanguine expectations of the committee and managers of the school; it is found to be amply sufficient for the whole household; a thorough ventilation is combined with rapid drying; beds and bedding, as well as all other articles, to the finest muslin, may with safety be

subjected to its operation, without the possibility of burning or singeing; while the *great economy of fuel and ease of management renders it a cheap, safe, and valuable* appendage to the school.

Issued by direction of the annual general meeting of Sibford school, and signed on behalf thereof by

(Signed) JAMES SESSIONS, Clerk.

SIR, *Sarsden House, 27 September* 1856.

I HAVE much pleasure in assuring you that the stove lately erected in my laundry is not only most convenient, but very economical. I will take every opportunity of recommending it to my friends.

I am, &c.

Mr. Huthnance, (Signed) J. H. LANGSTON, M.P.
Chipping Norton.

SIR, *Chipping Norton, 1 October* 1856.

I HAVE much pleasure in giving my testimony in favour of your patent laundry stove and drying room. I find it a most useful and most economical apparatus, while it affords the greatest comfort and convenience to my family. I consider it only requires to be known to be appreciated.

I am, &c.

Mr. Huthnance, (Signed) ROBERT PARSONS, Draper and Tailor.
Chipping Norton.

SIR, *Banbury, 9 January* 1857.

YOUR letter of the 6th instant was laid before the Board yesterday. The Guardians directed me in reply to inform you that they are perfectly satisfied with the patent laundry apparatus erected by you at the workhouse; they consider that it is admirably adapted for their establishment, and they believe, that in an economical point of view, its value will soon be evident.

I am, &c.

Mr. Huthnance, (Signed) W. W. HEMING,
Chipping Norton. Clerk to the Board of Guardians.

SIR, *Shipston-on-Stour, 10 January* 1857.

IT gives me sincere pleasure to inform you, in reply to your inquiry, that your patent apparatus for drying has given me the greatest satisfaction. I find it most convenient and very economical. You need not hesitate to refer any one to me on the subject; I consider it a highly valuable appendage to my establishment.

I am, &c.

Mr. Huthnance, (Signed) EDMUND ATKINS, Tanner.
Chipping Norton.

SIR, *Banbury, 12 Jauuary* 1857.

HAVING seen your patent apparatus for drying at work, I was induced to adopt it for a bacon room, which I find answers the purpose to my entire satisfaction. I likewise find it very valuable to me in the preservation of dry goods. In point of safety, convenience, and economy, I think it cannot be equalled. I believe your apparatus to be capable of the greatest extension, and I beg to assure you that I shall feel much pleasure in recommending it to my friends.

I am, &c.

Mr. Huthnance, (Signed) W. W. COLEMAN, Grocer.
Chipping Norton.

Laundries are now in course of erection for the under-mentioned persons, viz.:—The Guardians of the Shipston Union Workhouse; Colonel North, M.P., Oxon; Henry Dashwood, Esq., J.P., Oxon; the Governors of the Oxford Infirmary; the Guardians of the Oxford Industrial School; the Superioress of the Convent at Banbury.

Tabulated Reports, by Her Majesty's Inspector of Schools, H. G. Bowyer, Esq., on the Parochial Union Schools inspected by him in the Eastern and Midland District, from Lady Day 1856 *to the* 23*rd of March* 1857.

Name of School and Date of Visit.	Boys.	Girls and Infants.	General Observations on Discipline, Instruction, &c.
Bedfordshire.			—
Ampthill, November.	8	28	The boys are instructed in the National school, the girls and infants in the house by a mistress. There had been a great deal of sickness among the children, which had retarded the progress of the school, but, making allowance for this circumstance, the instruction was satisfactory. The girls are well instructed in needlework, but the boys receive no industrial training.
Bedford, November.	41	35	The boys' school, conducted by a very deserving master, who has been many years in this situation, was in its usual fair condition. Their instruction, though not extensive, is sound as far as it extends, and the excellence of their moral training is evinced by their good conduct in after life. The girls' school was, on the whole, in fair condition. The boys are taught shoemaking and tailoring by industrial instructors, paid from the Parliamentary grant, and the girls needlework by the mistress.
Biggleswade, May.	21	30	The boys, formerly sent out to school, were now taught with the girls by the mistress, who has been for several years in this situation. I was much pleased with the progress the children had made, as well as with the good discipline and healthy tone of activity which the school exhibited. The boys are employed in agriculture, and the girls in needlework.
Leighton Buzzard, May and November.	11 12	34 31	This school is a fair one when there are a sufficient number of permanent scholars, but it has been for some time very fluctuating in its composition. The girls' school consists chiefly of infants. The boys work in the garden. The girls receive the training usual in workhouse schools.
Woburn, November.	14	23	A good school, conducted by a mistress lately at the Ampthill Parochial Union School. The boys were, till her appointment, instructed in the Free School, and whenever I examined I was struck with their ignorance and want of intelligence. The contrast they now present is a remarkable exemplification of the truth, that the school is the reflection of the teacher. A new school-room was nearly completed, and the Board had decided upon erecting a separate laundry for the girls.
Cambridgeshire.			
Cambridge, July.	38	52	The boys' school is respectably conducted, but has been stationary for some time past. The girls' school has improved, and is nearly equal to the former. The boys work on the land, and learn shoemaking and tailoring the girls knit and sew, as in other workhouses.
Caxton and Arrington, January.	10	28	A fair school, conducted by a mistress.

Name of School and Date of Visit.	Boys.	Girls and Infants.	General Observations on Discipline, Instruction, &c.
Cambridgeshire—*cont.*			
Chesterton, July and December.	28 26	17 30	The boys' school has improved since my last report, and is in a respectable state of efficiency.. The girls' school is middling. The boys work in the garden, and learn shoemaking and tailoring. The girls sew, knit, and wash.
Ely, December.	32	41	A mixed school, conducted by a master and mistress, appointed since my last inspection. The changes of teachers have been very frequent in this school as long as I have been acquainted with it, but they have been, fortunately, all above the average, so that the efficiency of the school has not suffered. On this occasion the instruction, though generally respectable, was not equal to what it used to be. The most advanced scholars had rather lost ground than improved. The boys are employed in agriculture, and the girls wash and iron, besides sewing and knitting.
Linton, July.	19	12	Separate schools, fairly conducted by a master and mistress. The boys are employed on the land, the girls in sewing and knitting.
Newmarket.	39	26	This school is very fluctuating, and the room is much too small for the numbers in the winter months, which is very detrimental to its discipline and tone. The instruction is, however, generally fair, and has been sometimes good.
North Witchford, December.	16	34	The boys' school was a good deal improved, and was in a respectable state of efficiency. Some land is cultivated by them. The girls' school was fair, but stationary. Washing and ironing are taught, besides the needlework usual in workhouse schools.
Wisbeach, December.	69	95	The boys' school was not in a satisfactory state, but an efficient master had been recently appointed, under whom it will certainly rise from its present depression. The girls' school was generally satisfactory, but stationary in the character of the instruction. A piece of land is cultivated by the boys. The girls wash and iron, besides sewing and knitting, but the washhouse is a very bad one, and without a drying room, so that washing, ironing, and drying are obliged to be performed in one small and sloppy room.
Essex.			
Colchester, June.	37	29	Both schools exhibited a fair amount of improvement. The boys are better instructed than the girls, but the latter are now fairly proficient. The elder boys work in the garden, and the younger ones knit. The girls are well instructed in needlework and knitting.
Halstead, June.	22	19	Both schools were very backward, making every allowance for their fluctuating composition. There has since been a change of teachers. The boys worked occasionally in the garden; the girls were taught needlework, but not knitting.

Name of School and Date of Visit.	Boys.	Girls and Infants.	General Observations on Discipline, Instruction, &c.
Essex—*cont.*			
Saffron Walden, July.	36	40	New teachers had been appointed a short time before my visit, and the schools had been separated. The master, an able teacher, had already effected some improvement. The mistress, a person of natural aptitude for teaching, though small experience, had not been long enough in office to produce much impression on her school, which she received in a very backward state. The industrial training was as efficient as usual, consisting in agriculture, cow-keeping, dairy work, and needlework.
Tendring, June.	21	42	The boys' school was composed almost entirely of recent admissions, and was consequently in low condition. The girls' school was as hopelessly bad as it has been ever since I have known it. Never was school more unfortunate in its teachers! The boys' school has had some decidedly good masters, and none incompetent. The boys are employed on the land; the girls sew and knit.
Hertfordshire.			
Hitchin, May.	23	38	The boys' school was in its usual respectable state of efficiency. The girls' school middling and stationary. The boys are taught tailoring, and occasionally employed on the land. The girls sew, knit, and wash.
Royston, January 1857.	46	50	The boys' school had improved since my last visit, and was in fair condition. The girls' school was as middling as usual, but the Scriptural knowledge of the first class was fair. Needlework is well taught. The industrial training of the boys is very defective; only eight are taught shoemaking and tailoring, the rest receive no training, there being no land for that purpose.
Huntingdonshire.			
Huntingdon, May.	25 28	43 43	Two new school-rooms had been erected since my last visit, and the schools were conducted on the separate system. At my first visit the boys' school was conducted by a trained master, but he soon after married the mistress, and they both resigned. At my second visit the boys were under a temporary master, and the girls under a new mistress. Some land is cultivated by the boys.
St. Ives, December.	28	25	Both schools have improved considerably under the present teachers, and are in a fair state of efficiency. On this occasion the Scriptural knowledge of the boys was not equal to what it used to be. The boys are employed in agriculture, the girls in needlework and knitting.
St. Neot's, May.	11	33	Since the resignation of the schoolmaster the boys have been sent to the Eaton National School, where they are well instructed. The girls are fairly taught by a mistress. The boys are employed in agricultural labour, and a new laundry has been built for the girls.
Leicestershire.			
Ashby-de-la-Zouch, November.	30	29	A mixed school, fairly conducted by a mistress. I recommended that an industrial instructor should be appointed to train the boys to agriculture.

Name of School and Date of Visit.	Boys.	Girls and Infants.	General Observations on Discipline, Instruction, &c.
Leicestershire —*cont.*			
Barrow-on-Soar, April.	15	12	A fair school, conducted by a master and mistress, but stationary. The boys are employed on the land.
Billesdon, April.	7	15	A small mixed school, under a mistress, tolerably conducted. The boys are employed on the land, and the younger boys knitting. The girls sew and knit.
Blaby, March	7	12	A fair mixed school, under a mistress. It was formerly very moderate, but has lately improved.
Hinckley, April and November.	16 3	19 11	A mixed school, very fluctuating in its composition. I visited it twice, in order to examine newly appointed mistresses.
Leicester, March and January 1857.	76 89	81 116	The boys' school is efficiently conducted by a certificated master trained at Kneller Hall, but it is composed of such fluctuating materials that it is impossible for him to effect much. The girls' school labours under the same disadvantage, and under the further one of the very large amount of needlework performed in it, which materially interferes with the school instruction. The infants are taught in a satisfactory manner. The industrial training of the boys consists in shoemaking and tailoring. The girls are taught to wash and iron.
Loughborough, April.	22	29	The boys' school was much improved; the girls' school also showed some improvement. The boys work occasionally in the garden. The girls sew and knit, and two of them are employed in household work.
Lutterworth, April, November and January 1857.	9 5 8	25 18 24	This is a fair school, under a mistress, and had improved a good deal under the late one. She was succeeded by a former pupil-teacher in the Kirkdale Industrial School. I was much pleased with the progress made by the children at my last inspection.
Market Bosworth, April and October.	14 18	21 14	An average school, under a mistress. The abuse of taking the children from school into the women's ward to nurse prevails here to a remarkable extent.
Market Harborough, December.	17	32	A mixed school, under a mistress. Its composition was very unfavourable, chiefly infants or recent admissions. It therefore appeared to disadvantage; bu in general it is a very fair school.
Melton Mowbray, December.	31	59	Both schools have been conducted in a very satisfactory manner by the present teachers, since they have been under my inspection; but on this occasion they were not in their usual good condition, owing to the changes which have taken place in their composition. The boys work in the garden, but not regularly. The girls sew, knit, wash and iron.

Name of School and Date of Visit.	Boys.	Girls and Infants.	General Observations on Discipline, Instruction, &c.
Lincolnshire.			
Boston, December.	47	79	The boys' school had been for six months under an inefficient teacher, lately a lawyer's clerk, and was consequently in bad condition. The girls' school was in a high state of efficiency, and creditable to the present able mistress. A few of the boys are taught shoemaking and tailoring, the rest cultivate a piece of land. I recommended the appointment of an agricultural industrial instructor. The needlework of the girls is excellent, and some of them are taught to cut out.
Bourn, December.	19	31	The boys' school was rather improved, but still middling. Some land is cultivated by them. The girls' school which has always been under bad teachers since I have known it, was as unsatisfactory as usual.
Caistor, February.	15	42	A school of average merit, which has varied very slightly since I have known it. The boys are employed on the land belonging to the Union, and the girls wash and iron, besides sewing and knitting.
Gainsborough, February.	27	42	A new master had been appointed. I found the boys' school not in so efficient a state as it used to be, but still respectable. The girls school was improved, and in fair condition. The boys cultivate a piece of land, and the girls wash and iron, besides sewing and knitting.
Glanford Brigg.	41	48	The boys' school was left in very low condition by the late master, but an efficient one had been appointed shortly before my visit. There was a new mistress in the girls' school, which was much the same as usual. The boys cultivate a piece of land, and the girls wash and iron, besides sewing and knitting.
Grantham, January 1857.	16	25	The boys' school was very moderate. The girls' school fair. Both teachers were appointed since my last visit. The boys cultivate a piece of land; the girls sew, knit, wash, and iron.
Holbeach, December.	28	32	The boys' school has improved under the present master trained at Kneller Hall, and is in a respectable state of efficiency. The girls' school is very moderate. The boys cultivate a piece of land; the girls sew, knit and cut out.
Horncastle, January 1857.	30	40	The boys' school was in fair condition, the girls' school middling. But it consisted chiefly of recent scholars. A piece of land is cultivated by the boys.
Lincoln.	42	45	The schoolmaster had died shortly before my visit, and the school was conducted by a temporary master, till a successor could be appointed. The boys receive no industrial training. The girls' school was in fair condition, but deficient in regard to arithmetic. I recommend the appointment of industrial instructors in both schools.
Louth, February.	31	43	I found both schools improved. The boys' school is well conducted. The girls' school is now in a fair condition. The industrial training of the boys is very imperfect. The girls wash and iron, besides sewing and knitting.

Name of School and Date of Visit.	Boys.	Girls and Infants.	General Observations on Discipline, Instruction, &c.
Lincolnshire—*cont.*			
Sleaford, February.	24	40	A good school conducted on the mixed principle by a master and mistress. Singing from notes has been introduced, with success, by the present master. Some land is cultivated by the boys.
Spalding, December.	38	44	The boys' school was under an able master, and had consequently improved considerably. The girls' school was stationary. A few of the boys were taught shoemaking and tailoring; the rest were employed in the cultivation of a piece of land. I recommended the appointment of an agricultural industrial instructor.
Spilsby, February.	23	41	This school is no longer in its former high state of efficiency, but is on the whole a very fair one. The girls have fallen off less than the boys, but this is explained by the fact, that their first class is composed of nearly the same children as at my last visit. A piece of land is cultivated by the boys.
Stamford, December.	27	38	A mixed school with master and mistress. The school had improved considerably under the instructions of the present master, lately at the Boston Union school. A piece of land is cultivated by the boys.
Norfolk.			
Aylsham, August.	21	28	This school has been, for some time, unfortunate in its teachers. The present ones are very middling, but none better could be procured. The schools were very middling, but the girls were superior to the boys in Scriptural knowledge. The boys cultivate a piece of land, and the girls sew, knit, wash, and iron.
Blofield, July.	21	21	A mixed school, under a master and mistress. This school, conducted ever since I have known it by the same teachers, has been stationary till the last year, when it slightly improved; one boy was taught shoemaking, and the rest were trained to agricultural labour. The girls were instructed in needlework, knitting, household work, washing, and ironing.
Depwade, August.	22	27	A well conducted school in every respect. The boys are trained to agricultural labour, and some of them to shoemaking and tailoring.
Docking, September.	19	36	This school has been unfortunate in its teachers for several years; many of them have been morally as well as intellectually unfit for the duties of a teacher. At the time of my visit there was no master.
Downham.	31	20	A good mixed school with two teachers. Of late, however, a good deal of insubordination has prevailed in it. Some land is cultivated by the boys.
Erpingham, September.	25	18	The boys' school is in a very efficient condition. The girls' school is fair, but deficient in regard to arithmetic. The boys are trained to agricultural labour, and the girls to washing and ironing, besides the usual needlework.

Name of School and Date of Visit.	Boys.	Girls and Infants.	General Observations on Discipline, Instruction, &c.
Norfolk—*cont.*			
St. Faith's, July.	19	11	An efficient school with two teachers. Excellent maps are drawn by the boys. The boys are employed on the land.
ast and West Flegg.	8	14	The elder boys are taught in the National school, and the rest fairly by a mistress.
Forhoe, September.	21	17	The boys answered fairly in the Scriptures, but in other respects their instruction was moderate. The girls' school was stationary. Some land is cultivated by the boys.
Free bridge, Lynn, September.	10	12	A mixed school under a mistress; much improved, and very fair.
Guiltcross, September.	30	38	A very fairly conducted school. Some land is cultivated by the boys, and the girls wash and iron, besides sewing and knitting.
King's Lynn, September.	27	39	The boys' school was fairly instructed, but the girls' school was very middling.
ddon and Clavering, July.	25	22	A mixed school, with a master and mistress. The instruction is middling, but the industrial training is good. The boys cultivate a piece of land, and the girls wash and iron, besides sewing and knitting.
Mitford and Launditch, September.	64	110	This is one of the most efficient schools in my district both in regard to instruction, and to industrial training. The boys' school was as excellent as usual, and the girls' and infant schools were in a satisfactory state. The industrial training consists in agriculture for the boys, and needlework, knitting, washing, ironing, and kitchen work for the girls.
Norwich, Boys' Home July	43	–	This establishment is a house hired by the union for the accommodation of the boys who would otherwise be in the workhouse, as well as for the board and lodging of those formerly belonging to the former class, who are earning wages in varous employments in the town, but are not yet able to provide entirely for themselves. As soon as their earnings are sufficient to enable them to do so, they are struck off the books of the Home. Till then they pay for their board and lodging out of their earnings. The master of the establishment is the schoolmaster of the boys receiving in-door relief, who are denominated the "workhouse boys," to distinguish them from the former class. The school has improved considerably under the present master, and is now in a satisfactory state. I subjoin the financial statement for 1855:—

Earnings of Home Boys during the Year		113 6 0	
Workhouse gain brought down and deducted		12 0 6¼	
Balance in favour of the Home		101 5 5¾	

* The whole salary of the chaplain is charged to the Workhouse Account, but the excessive number of servants and sewing women employed at the Home, and not included in the returns of average numbers, more than counterbalance the portion of such salary fairly chargeable to the home.

NAME OF SCHOOL AND DATE OF VISIT.	Boys.	Girls and Infants.	General Observations on Discipline, Instruction, &c.
NORFOLK—*cont.*			
Norwich, Girls' Home, July.	-	38	This establishment resembles the former, except that there are no out-boarders. It is simply a pauper school separate from the workhouse. The general superintendence of the establishment, and the industrial training are admirably conducted by the matron, and the children are fairly instructed by a mistress. The girls are thoroughly trained for domestic service.
Norwich, Workhouse School, July.	18	47	This school was intended only for children admitted from temporary causes, the more permanent inmates being sent to the Homes; but, owing to the insufficiency of the accommodation afforded by these, many children who ought to be sent to them, are necessarily left in the workhouse. Several of them have been so for more than two years.

Name of School and Date of Visit.	Boys.	Girls and Infants.	General Observations on Discipline, Instruction, &c.
Norfolk—*cont.*			
Swaffham.	-	-	Not visited. Children instructed out of the house.
Thetford, September.	24	23	An excellent school conducted by a master and mistress. The master was educated and trained in the Stow Union school. The boys cultivate three acres of land. Some of them are also taught shoemaking and tailoring.
Tunstead and Happing, August.	10	12	A mixed school, under a master and mistress. It has improved considerably under the present master, and is now in a respectable state of efficiency. Singing is fairly taught.
Walsingham, September.	30	13	The girls' school was without a mistress; one had been appointed (the second since my last inspection), but she had not yet entered on her duties. The instruction was moderate. The boys' school was generally fair, and somewhat improved; but the maps had not been used as they ought to have been.
Wayland, September.	9	27	A small mixed school, very fairly conducted by a mistress.
Great Yarmouth. August.	32	42	The boys' school was in a satisfactory state of efficiency, and had improved considerably. The girls' school was very fair. The industrial training of the boys consists in agriculture, shoemaking, and tailoring.
Northampton-shire.			
Brackley, May.	12	19	The boys' school has lately improved, and is in fair condition. The girls' school is very fair.
Brixworth, January 1857.	15	13	A fair mixed school, lately improved.
Daventry, April and January 1857.	29 18	29 39	A mixed school, conducted by a master and mistress. The reading of of the upper classes was, however, deficient in distinctness; and generally the two upper classes were not so satisfactory, on this occasion, as as usual. Some land is cultivated by the boys.
Hardingstone, April.	6	20	A small school, conducted by a mistress. The instruction was stationary.
Kettering.	18	34	A mixed school, very efficiently conducted by a mistress.
Northampton, April and October.	20 19	26 39	A mixed school, very efficiently conducted by a mistress. The boys are taught shoemaking.
Oundle, December.	23	18	A moderate school, conducted by a mistress. There was some improvement in the Scriptural knowledge.
Peterborough, December.	28	60	A very fair mixed school, conducted by a master and mistress. It has improved a good deal under the present teachers. The boys cultivate a piece of land, and the girls wash and iron, besides learning the needlework usual in workhouse schools.
Potterspury, April and January 1857.	12	16	A mixed school, conducted by the workhouse master, assisted by a mistress. The instruction was moderate. Some land is cultivated by the boys.

Name of School and Date of Visit.	Boys.	Girls and Infants.	General Observations on Discipline, Instruction, &c.
Northamptonshire —*cont.*			
Thrapston, December.	7	4	There was only one boy who had been any time in the school. He answered fairly.
Towcester. March and December.	5 13	13 26	A moderate school, conducted by a mistress. There has been, however, some improvement of late. The boys work in the garden, and some of the girls are taught to cook.
Wellingborough, December.	15	31	A fair mixed school, conducted by a mistress. The boys are employed in agricultural labour, and some girls are trained to dairy work.
Nottinghamshire.			
Basford, February.	21	34	A very fair school, and lately improved. I recommended the appointment of industrial instructors.
Bingham, January.	4	6	A very small school, efficiently conducted by a mistress, who is thrown away upon it.
East Retford, February.	14	15	A small school, chiefly composed of infants. The religious knowledge is fair, but other things are moderately taught. The industrial training of the girls is good.
Mansfield, February.	16	19	A mixed school, conducted by a mistress. The instruction was moderate. The boys are employed in agriculture.
Newark, February.	15	33	A new master and mistress. The school, which is a mixed one, was in bad condition at the time of their appointment, but I expect an improvement under their management. A piece of land is cultivated by the boys.
Nottingham, January.	55	70	The boys' school was generally stationary, but an improvement had recently taken place in the teaching of the Catechism. The boys are taught shoemaking, tailoring, and baking; and their industrial training has worked well in enabling them to obtain employment out of doors. The girls' school was improved in discipline and proficiency.
Radford.	-	-	The children, who are very few, are instructed out of the house. I have not examined them this year.
Southwell, February.	12	23	The boys' school was, a few years ago, one of the best in my district, but it has had a succession of inefficient teachers, and is consequently very much deteriorated. The girls' school is as unsatisfactory as it has always been. A piece of land is cultivated by the boys.
Worksop.	14	26	A very fair and progressive school, under a mistress. The boys work on the land, and the girls sew, knit, make and mend, wash and iron.
Rutland.			
Oakham, January.	11	7	A mixed school, conducted by the workhouse master. The instruction has been very unsatisfactory for several years; but on this occasion I can report an improvement. A piece of land is cultivated by the boys.
Uppingham, January.	21	13	A mixed school, very efficiently conducted by a mistress.

Name of School and Date of Visit.	Boys.	Girls and Infants.	General Observations on Discipline, Instruction, &c.
STAFFORDSHIRE.			
Burton-on-Trent, November.	36	43	This school contains some children from the Tamworth Union, and a good many from the West Bromwich Union. The latter, who are recently admitted, are very ignorant, and, consequently, give an unfavourable aspect to the schools. Making allowance for this circumstance, the instruction may be considered as fair as usual. A piece of land is cultivated by the boys.
Cheadle, November.	9	13	A small school, efficiently conducted by a mistress. The boys cultivate a piece of land.
Leek, November.	11	32	A mixed school, very fairly conducted by a mistress. The instruction is confined to Scripture, reading, writing, and arithmetic; but what is attempted is well done, and the discipline and moral tone of the school are excellent. The girls are taught needlework, knitting and laundry work, under the superintendence of the mistress. The boys are employed on the land.
Lichfield, May.	14	18	A fair average school, conducted by a mistress. The instruction has improved during the last two years.
Penkridge, November.	10	19	A moderate school, conducted by a mistress, recently appointed.
Stafford, November.	25	41	A very fair mixed school, conducted by a master and mistress. The boys cultivate a piece of land.
Stoke-upon-Trent, November.	43	67	An excellent school, both in regard to instruction and industrial training.
Stone, November.	15	26	The boys' school had somewhat improved, but was still middling. The girls' school was stationary.
Tamworth, January.	3	18	A mixed school, under a mistress. The instruction was much improved. The elder boys are sent to the Burton-on-Trent workhouse.
Uttoxeter, November.	19	12	A fair school, conducted by a mistress.
Walsall, May.	16	12	A mixed school, under a mistress. The instruction is as fair as can be expected, considering the extremely fluctuating character of the attendance.
West Bromwich.	–	–	The children are mostly sent to the Burton-on-Trent workhouse.
Wolstanton and Burslem, November.	24	30	A very moderate school. Some of the boys are taught shoemaking and tailoring.
Wolverhampton, May and October.	60 50	74 76	The boys' school was in its usual excellent condition. At my second visit I found the girls' school much improved. The guardians have, since my last visit, taken measures for rendering the industrial training more efficient.

Name of School and Date of Visit.	Boys.	Girls and Infants.	General Observations on Discipline, Instruction, &c.
Suffolk.			
Blything, July.	25	33	This school is very fluctuating, and cannot, consequently, be rendered efficient. The boys cultivate a piece of land, and the girls wash and iron, besides sewing and knitting.
Bosmere and Claydon, August.	19	27	This is a very fair school. The boys are, however, inferior in intelligence to the girls, though on this occasion they showed themselves to greater advantage than usual. The industrial training is excellent, consisting in agriculture and cowkeeping, needlework, knitting, cookery, and dairy work.
Bury St. Edmund's, August.	22	22	An average specimen of a workhouse school, and at present more fortunate in its teachers than it has lately been.
Hartismere, August.	20	20	This is more properly an industrial school than a workhouse school, as it is in a building several miles from from the workhouse. The instruction has been moderate and stationary for some years, but on this occasion I found some improvement. The boys cultivate a school farm, and the girls are trained to cookery, washing, ironing, and household work, besides the usual needlework.
Hartismere, Workhouse School.	–	19	This is a school which has been established more than a year ago in the workhouse for the instruction of the infants who are too young to be sent to the former school. They are fairly taught.
Hoxne, July.	22	19	The boys were less backward than at my previous visit. The girls were much as usual. Fifteen boys were taught agriculture, two shoemaking, four tailoring, and one baking. Nineteen girls were taught needlework, four washing, and one cookery. The industrial training is, therefore, very efficient.
Ipswich, August.	48	46	Both schools are highly efficient, and satisfactory in every respect. The boys work in the garden, and some of them are taught shoemaking and tailoring. The girls sew, knit, and wash.
Mildenhall, August.	21	5	The school-room is disconnected from the workhouse, and day scholars are allowed to attend from the town. Only seven of the boys were from the workhouse. The instruction was moderate, and showed little, if any, improvement. The girls are taught in Lady Bunbury's school. A small piece of land is cultivated by the boys.
Mutford and Lothingland, August.	10	30	A fair school, conducted by a mistress. The industrial training is good. A good many of the boys go to sea.
Plomesgate, August.	19	34	The composition of this school is very fluctuating, so that the instruction cannot be raised above mediocrity. No allowance could, however, justify the very unsatisfactory state in which I found the boys' school at my previous visit. On this occasion I found a slight improvement. The Board have tried to procure a better master, but without success. The girls school was better than the boys', but still middling. The boys cultivate a piece of land, and the girls are taught dairy work, besides sewing and knitting.

Name of School and Date of Visit.	Boys.	Girls and Infants.	General Observations on Discipline, Instruction, &c.
Suffolk—*cont.*			
Risbridge, December.	28	31	The boys were tolerably well taught, but had not perceptibly advanced in knowledge. But the first class was reduced to three, which may, in great measure, account for it. The girls were very backward; the infants fair. The boys are sometimes employed on the land, but chiefly in mat-making.
Samford, August.	20	13	Both boys and girls were tolerably instructed, and had made some progress since last visit. The boys work on the land, and the girls wash and iron, besides sewing and knitting.
Stow, August.	28	17	An excellent school, conducted by the workhouse master, assisted by a mistress. The boys are trained to agriculture and straw plaiting, and some of them are taught shoemaking and tailoring. The girls are taught the needlework usual in workhouses, and household work.
Sudbury, July.	30	27	The children were fairly instructed, except in arithmetic. About two acres had been procured for the industrial training of the boys, which was conducted by the schoolmaster to the satisfaction of the Board. The girls are well trained by the schoolmistress in needlework, knitting, and laundry-work.
Thingoe, August.	16	28	The boys' school had improved, and was in a very fair state of proficiency. The girls' school was very fair but stationary. The boys work on the land under the direction of the superintendent of labour. Some of them are also taught shoemaking. The girls are taught needlework as in other workhouses.
Wangford, August.	14	13	A fair school, conducted by a mistress. The elder boys are instructed by the superintedent of labour, who directs their labours on the land belonging to the house.
Woodbridge, August.	17	34	The boys' school had suffered from two inefficient masters, and was, consequently, in an unsatisfactory condition. The girls' school had improved considerably under the care of the present mistress, who has rendered it, for the first time since I have known it, deserving of praise. The boys cultivate a piece of land.
Warwickshire.			
Alcester.	–	–	The children are instructed out of the house.
Aston, April and October.	12 15	19 14	A very pleasing school, conducted by a mistress in a satisfactory manner.
Atherston, April and November.	11 10	10 10	A fair school, conducted by the workhouse master.

Name of School and Date of Visit.	Boys.	Girls and Infants.	General Observations on Discipline, Instruction, &c.
Warwickshire—*cont.*			
Birmingham, April and October.	118 125	199 162	This is a very important school, and generally conducted in an efficient manner. At my second visit, however, I found the boys' school deteriorated. But an efficient master had been recently appointed, from whose exertions I anticipate an improvement in the discipline and moral tone of the school, as well as in its instruction. As it has been impossible to find suitable candidates for appointment as pupil-teachers in the school, the Board have, at my suggestion, selected two from the Blue-coat school. The boys are taught shoemaking and tailoring. I recommended a laundry and kitchen for the industrial training of the girls. The girls' and infant schools were in their usual satisfactory condition.
Coventry, April and September.	32 24	29 16	Both boys and girls are well instructed. The very young girls are more forward than in most other schools.
Foleshill.	–	–	Not visited. Children sent out to school.
Meriden, April	5	7	A very small mixed school, conducted by a mistress. The children are well taught.
Nuneaton, April and September.	11 6	14 10	This school has been very unfortunate in its teachers, and is, consequently, unsatisfactory. The last, however, was more promising than her predecessors, and had effected some little improvement in the instruction. The children, however, ought to be sent to the Coventry workhouse.
Rugby, March, September, and January.	7 3 17	11 11 11	This school was much neglected by the late mistress; and, though slightly improved at my first visit (in consequence of a previous severe report which I was compelled to make), was left by her in as unsatisfactory a state as ever. My last visit was for the purpose of examining a recently appointed mistress.
Solihull.	–	–	Not visited. Children instructed out of the house.
Southam, September.	22	22	A very fair school, conducted by a mistress. The attendance had increased from the admission of several deserted families.
Stratford-on-Avon, September.	6 4	19 20	The mistress whom I found at my first visit proved incompetent, and her appointment was, consequently, not confirmed by the Poor Law Board. At my second visit I found a new mistress, who promised better than her predecessor.
Warwick, September.	45	65	A well-conducted school. The girls are taught washing and ironing, besides needlework. The boys work on the land belonging to the house.
Worcestershire.			
Shipston-on-Stour, September.	17	31	A mixed school, very fairly conducted by a mistress.

General Report, *for the Year* 1856, *by Her Majesty's Inspector of Schools,* T. B. Browne, Esq., Barrister-at-Law, *on the* Parochial Union Schools *inspected by him in the* Northern District; *and on the* Ragged Schools *and* Reformatories *inspected in the same district.*

My Lords, 1857.

Subjects of Report.

My Report for the year 1856 relates not only to schools of parochial unions, but also to ragged schools and reformatories for criminal children, inspected for the first time, in accordance with the instructions of your Lordships, during the past year. The duties of Inspectors of union schools may henceforth, therefore, extend to all destitute, vagrant, and criminal children throughout the country; involving the consideration of questions of greater difficulty than any, perhaps, that have been discussed hitherto in these Reports. As I believe that children in workhouses, ragged schools, and reformatories all really belong to the same class in society, I have included the schools for all in one report, but, in order to facilitate reference, under three divisions.

I.—Schools of Parochial Unions.

General results.

In the course of the year 1856 schools were organized for the first time in Ripon and Bolton workhouses, and placed, in both instances, under the management of good teachers. A school has also been opened for infants in the Preston workhouse, so that there are now three schools in three distinct workhouses in that union; and very recently, since my visit in October last, a school has been organized for the first time in the Auckland workhouse. There are still, however, sixty-two unions or districts, maintaining their poor separately, without regular schools. Some of these unions are without workhouses, but in most of them the children are sent from the workhouse to a neighbouring village school,—a practice, as I have remarked on former occasions, from irregular attendance or other causes, rarely leading to satisfactory results. From five unions, Barton, Bury, Prestwich, Rochdale, and Glossop, a limited number of children is sent to Swinton. The Barton guardians thus educate more than one in a thousand of their population. In the other unions the proportion is much less.

The Tabulated Reports for 1856, based upon my own notes, made during the examinations in the schools inspected, give the following results:—

Number of children in attendance	8,264	In the simple rules of arithmetic	1,875
Present at the date of inspection	7,640	In the compound rules	1,168
Reading easy narrative	1,643	In proportion and practice	362
Reading Holy Scripture	2,906	In fractions (correct)	360
Reading secular books	2,433	Learning geography	3,081
Writing on paper	3,316	Learning grammar	1,949
Writing from dictation (correct)	957	Learning English history	1,362
In numeration and notation (correct)	1,939	Learning music from notes	677

The centesimal proportions, compared with those for the year 1855, show generally improvement.

	In 1855.	In 1856.		In 1855.	In 1856.
Present at the examination	7,719	7,640	In the simple rules of arithmetic	24·08	23·21
Reading easy narrative	22·37	21·50	In the compound rules	14·70	15·23
Reading secular books	30·18	31·84	In proportion and practice	5·54	4·74
Reading Holy Scripture	37·51	38·03	In fractions	3·79	4·71
Writing on paper	42·94	43·40	Learning geography	36·00	40·32
Writing from dictation (correct)	9·88	12·52	Learning grammar	23·74	25·51
In numeration and notation (correct)	21·37	25·37	Learning English history	16·16	17·82
			Learning music from notes	10·66	8·86

Diminution in number of children educated by Liverpool guardians.

It may be safely said that education has continued to advance, although slowly, in the northern district up to the present time. There would, indeed, have been an increase in the numbers present if the Liverpool guardians had not reduced the attendance at Kirkdale below the level of any former visit. Those schools were built to accommodate 1,150 children, and have accommodated more than 1,200; but 737 only were present at the date of inspection in October. The 300 or 400 children thus excluded must either grow up without education, or be reduced to depend for it upon private benevolence; and if any of them should be admitted into ragged schools, it is clear that they must be a heavier burden to the subscribers than they would be to the ratepayers at Kirkdale, where the necessary staff of teachers, rooms, apparatus, and all other requirements are already provided.

But, if some slight improvement is perceptible year after year in the education of the pauper children in the northern district, it must be acknowledged that the general results are really trivial and unsatisfactory. If there were a good school in every union, and 8,000 children were well educated by the guardians throughout this "populous north," I should still say the same thing. But such is not the fact. It has been already stated that in many unions there are no schools, and the tabulated reports in detail will prove that in not a few schools the education afforded is nearly worthless, and not likely to have any practical or permanent effect. The annual addition of three or four schools on the present scale to the list, if it should go on regularly for some time to come, would

still be a small matter. Much more is plainly required if any deep and lasting impression is expected to be made on the destitute and criminal classes.

Guardians should educate more children;

The population of this district exceeded 5,500,000 in 1851, and is probably by this time not less than 6,000,000. The education of 8,000 children cannot have much effect upon such a mass of human beings. These 8,000 constitute no more than a fraction—about one sixth or one seventh—of the pauper children of the district, many of whom must receive out-door relief, from the necessity of the case; because in their respective unions there are either no workhouses, or none large enough to accommodate them. And I apprehend that in all parts of the country where the working people depend chiefly upon manufactures for employment, out-door relief must be treated as a permanent fact. Guardians and ratepayers would not consent to maintain in prosperous times a spacious workhouse, which would then be comparatively empty, in order that they might be enabled to carry out the workhouse test in the case of every applicant for relief in times of distress. In manufacturing districts, therefore, there is a peculiar reason for treating the distinction between out-door and in-door pauper children as null in respect of education; for in parts of the country purely agricultural a large proportion of the children would probably be inmates of the workhouse who receive out-door relief in a great manufacturing town. The distinction between out-door and in-door pauper children must be, in a great many instances, merely formal, not substantial; yet, unreal as it is, practically, and in point of treatment, it places a barrier, almost insurmountable, between two children of the same class; one is educated at the public expense, and the other is not. This distinction is, indeed, contrary to the intentions of the legislature, as expressed in the Act of the 18th and 19th Vict., cap. 34., "to provide for the education of children in the receipt of out-door relief." But, as that Statute simply enables guardians to send children to school and pay for them, it is not likely to tempt ratepayers to add largely to their expenditure,* or pauper parents to forego the earnings of their children, often considerable, for the sake of future advantages, which such persons cannot be expected to appreciate. It is evident that both guardians and paupers require some stronger inducement than the Statute supplies. The number of pauper children to be educated must bear a certain proportion to the population. With a population of five millions and a half and upwards,

* Mr. Symons' Report for 1855, p. 139.

and with the numbers of children in receipt of out-door relief attested by the half-yearly returns published by the Poor Law Board, it may be safely assumed that the guardians in this district ought to educate about 50,000 children. And, if guardians had the power to make the consent of the parent to his child's education a condition of relief to that parent, a power which the Statute in question expressly refuses, and were also authorized to open ragged schools at suitable spots in their respective unions where pauper children might receive their meals as well as instruction, and work half their time for the benefit of the ratepayers, it is probable that education would advance rapidly, and that a far more decided check would be given to pauperism and crime than is practicable with the limited resources of ordinary ragged schools supported by voluntary subscription, which are the chief institutions now available for supplying what has been left undone by guardians.

and can maintain pauper schools more easily and economically than any other persons.

It is certain, I think, that no private persons, however vigilant and anxious that their charity should not be abused, could conduct a ragged school so economically, or so easily, as a board of guardians, who would be able to test the circumstances of each applicant for admission through their relieving officers; and who could set off against the expense of the child's maintenance and instruction the allowance now made to his parent on his behalf, which would of course be withheld as soon as the child attended school. It is questionable whether the education of the large number of pauper children I have mentioned would add anything to the expenditure of the ratepayers, as the diminution in the sums paid for out-door relief on account of children might fully equal the expenses incurred by the maintenance of schools for feeding and teaching them. The measure, if carried out, might also operate, in some degree, as a test of destitution, and be the means of removing from the relief list some names which ought not to be there, as there are, doubtless, persons who would not relinquish the earnings of their children on the terms proposed.

It may be alleged, in answer to what I have stated, that poor law guardians are not the proper persons to carry out education on so large a scale, and that they are elected by ratepayers in a great measure for a different object. But I conceive that a multiplication of machinery is, in all cases, to be deprecated, unless it can be shown to be necessary. The guardians can educate destitute children with greater ease, and at less cost, than any other persons; and if it cannot be said that some among them are very favourable to education, there is no reason to suppose that any elected body would, on the whole, be much more so, in the present state of public

opinion, and I conceive that the system of education, dependent throughout the country upon the co-operation of local managers, will not be departed from, for obvious and weighty reasons.

Indifference of some guardians to education.

Many boards of guardians certainly show great indifference to education, an unavoidable inference from the fact that there are so many unions without schools; on the other hand, I have no cause of complaint against a large number of the boards in this district; the books or apparatus which I ask for are provided, and more would probably be done if such guardians had more power. The different boards differ almost as much as individual men, and cannot be included, with any regard to justice, under the same category. No bodies can be more variously constituted than boards of guardians; they include among their members all classes, from small farmers and tradesmen to clergymen and magistrates, members of both Houses of Parliament, and some of the leading men in the country. I am unable to see any good reason why the education of pauper children should be considered a matter alien from the functions of such bodies. The hostility of some guardians to education is really symptomatic; it shows that such hostility, or at least indifference, exists somewhere among those whom they represent, and therefore would not fail to manifest itself in any elected and representative body. All men who endeavour to influence representative and elected assemblies, however pure their motives, or beneficial their objects, must expect to encounter difficulties, since they deal imperfectly with imperfect instruments, but the good which ultimately results, beyond all comparison preponderates over the evil. The proceedings of some boards of guardians are occasionally very strange and unaccountable, and the continuance year after year of many workhouses, in which classification of the inmates is impossible, and which are therefore nothing less than schools of vice, maintained at the public expense, argues a deplorable insensibility to right and wrong. It may be useful to mention, plainly and without reserve, some of the proceedings to which I refer. Thus, the Newcastle guardians incurred an expense, as I understand, of about 12,000*l.* in building schools, with a considerable extent of land attached to them, separated from the workhouse, large enough to accommodate 500 pauper children; and yet, at my last visit in 1856, I found the girls under the charge of a schoolmistress selected from the relief list, and a smaller number of children in attendance than were present in the old crowded schoolrooms in 1855. That such a sum should have been spent, such buildings erected, and that when they were finished, it should have been considered apparently a matter of no moment whether

they were filled or not, or whether the children were under the charge of competent or incompetent persons, is incomprehensible. It may be said, indeed, that the Newcastle guardians had scarcely had time to complete their arrangements, although the completion of a building can be foreseen; but this excuse does not apply to the Tynemouth guardians. They also have built good school-rooms, detached from the workhouse, much smaller than those at Newcastle, but at a considerable expense, and they also have appointed a teacher for the boys, selected from the relief list, a one-armed schoolmaster. If no money had been spent, no buildings erected in these two cases, the conduct of the guardians would have been intelligible; the anomaly consists in their having spent a large sum of money, apparently without an object.* The Ormskirk guardians appear to consider knitting, even for the boys, paramount to all other considerations. To the Rochdale guardians I have inadvertently given offence by omitting to state, in a very brief minute made long since in their visitors' book, that some of the children present at an examination were idiots, although the question of idiocy is manifestly one for a medical officer. It did not seem to occur to the guardians that the association of sane with idiotic children is an injury to both, and among the worst abuses in those workhouses which do not admit of a proper classification. As I have already stated, the Liverpool guardians have seriously reduced the numbers of children at Kirkdale; the Leeds guardians have never filled their industrial schools; and even the Manchester guardians had not filled Swinton at my last visit, although the numbers have been increased materially of late years, and at the last inspection there were many more children present in school at Swinton than at Kirkdale.

Progress of education dependent upon public opinion.

These facts notwithstanding, I believe, that the cause of education is advancing in the country, but it cannot advance very much faster than public opinion will permit. The opinions of constituents must always influence their representatives, and it seems to me a delusion to suppose that education can be materially promoted by changing the representatives, while the constituents must remain generally the same.

Main objects in educating destitute children.

As I have now reached the tenth year since my appointment as Inspector of Schools, it may not be useless if I endeavour to show what objects are attainable and desirable in the education of destitute children, and what obstacles are to be encountered in the efforts to attain those objects.

---

* "The life of the execution of affairs," says Bacon, "resteth in a good choice of persons."

Concerning the objects to be kept in view in the education of the poor, I have nowhere met with any remarks more pertinent than the following, extracted from Archbishop Whately's admirable annotations on Bacon's Essays, p. 213 :—

Interest of individual often distinct from that of public.

"Under this head of the 'dividing between self-love and society' may be placed a distinction made by Bishop Copleston between two things which, he says, are occasionally confounded by Locke, as well as most other writers on education. 'Two things,' he remarks, 'ought to be kept perfectly distinct, viz., that mode of education which would be most beneficial as a system to society at large, with that which would contribute most to the advantage and prosperity of an individual. Now, the peculiar interest of the individual is not always the same, is seldom precisely the same, is even frequently at variance with the interest of the public; and he who serves the one most faithfully always forgets, and often injures, the other. The latter is that alone which deserves the attention of a philosopher; the former, individual interest, is narrow, selfish, and mercenary. It is the mode of education which would fit for a specific employment, or contribute most to individual advantage and prosperity, on which the world are most eager to inform themselves; but the persons who instruct them, however they may deserve the thanks and esteem of those whom they benefit, do no service to mankind. There are but so many good places in the theatre of life, and he who puts us in the way of procuring one of them does to *us*, indeed, a great favour, but none to the whole assembly.' He adds, a little after, 'A wide space is left to the discretion of the individual, where the claims of the community are either not pressing or wholly silent.'"

But it will be better, perhaps, to consider the positive side of the question before the negative.

Objects of State in education necessarily religious and moral;

The State must relieve pauperism and punish crime. It is therefore called upon to endeavour, at least, to prevent both; the State has also a direct interest in the general welfare of all its members, whose various faculties, moral, intellectual, and physical, cannot be fully developed without education; and experience proves that, to enable poor children to be educated, the assistance of the State is required. But, if these views be sound, it follows that, as crime is not prevented by the absence of the power to commit it, but of the will, the use which any individual may make of the additional power which he acquires through education is more material than such acquisition to the community; and whether the use will be good or bad is a question to be determined by observing how far the individual has been accustomed to act from religious and moral motives. It does not appear, therefore, how the State, consistently with a due regard to its own safety and continuance, can base the education of the poor on any other than a religious and moral foundation; or that, if the principles of religion and morality be neglected, the State has any very direct interest in the education of the poor at all. I conceive, also, that the diffusion of Christianity is a duty incumbent upon all Christian men, whether regarded in the aggregate, or as isolated. It will be conceded, I suppose, on

all hands, that if our schools were mere gymnasia for athletic exercises,—undeniably useful as strength and activity are,—they would not deserve the name of schools; and if such gymnasia were advanced another stage, and made places of intellectual as well as of bodily exercise, they would still be liable to a similar objection as maimed and imperfect institutions, because the moral element in man's nature would be disregarded. But the moral element is inseparably combined with the religious, for the very word duty implies One to whom it is due; and the multitude of allusions, continually recurring in historical and other reading, to matters forbidden in a purely secular school, would render the narrow path of the schoolmaster, who, in self-defence, must maintain order and veracity, as difficult to tread as the theory of his managers would be incomplete. It may be added that, whatever embarrassments might arise from the adoption of a system of education wholly secular, they would be perfectly gratuitous, as every year's experience furnishes additional proof that the so-called religious difficulty is unreal. In union schools it has not been discovered in the course of ten years. If pauper children did not receive religious instruction in school, it is evident that, in most cases, they would not receive it elsewhere. There is little ground for confidence that children would be properly instructed in any subject which did not form part of the regular scroll-work.

so-called religious difficulty unreal.

I have always endeavoured to promote intellectual as well as moral and religious training in union schools, believing that the one reacts upon the other. It has been said that "stupidity is seldom soundly honest."* However this may be, it does not appear to be either beneficial or practicable to impose upon teachers any restrictions as to the subjects to be taught to children, who are usually under twelve or thirteen years of age. The first object is, I think, to form the mind and character of the future man; the second, to communicate what is commonly termed useful knowledge. Many right-minded and well-meaning persons would think it enough to say, in answer to the question, "What would you do with pauper children?"—"I would have them brought up to earn their bread honestly." There is no fault to be found with this answer, as far as it goes, but I submit that it is too limited. The process of bread-earning must come to an end in some fifty years, or, it may be, much less; the man does not: he is to be trained not only for time, but for eternity. A pauper boy, too, may have latent powers, talents, capacities,

* H. Taylor.

by no means adjusted to his humble position in life. The wisdom of Divine Providence, in the apportionment of natural ability to individuals, is plainly regardless of the artificial distinctions of classes; and we have the highest authority for asserting that talents of all kinds were given to be used, in the noble words of Bacon, "for the glory of the Creator, and the relief of man's estate." But some one might allege further, "Why should you suppose that education, extend it as you will, is likely to do more for these children than it has done for so many before them, under far more favourable circumstances? If the method of teaching you advocate is good, it is not new; all teaching by questioning is essentially Socratic, and it failed to arrest the decline of the most intellectual people in the world, even in the hands of Socrates and Plato. Look at the lives of literary men, and if you think that the community has an interest in the matter, as well as the individual, what would the community gain by multiplying examples of the desultory scepticism and studied indecency of Montaigne, or of the baseness and ingratitude of Bacon, or of the coarse irreverence of Dryden, or of the effeminate malice of Pope, or the shallow presumption* of Bolingbroke, or the worthless sentimentalism of Sterne or Rousseau, or of the profaneness and the absence of self-control and self-denial in Voltaire, or of the indifference to truth and virtue of Goethe? In the same manner, the lives of many scientific men, of many artists and collectors of works of art, will not bear scrutiny.

Objections to education:

"The tree of knowledge is not that of life."

To such remarks it might be answered that men have abused all things; that it is a trite fallacy to argue against the use of anything from the abuse of it, more especially against the use of reason and knowledge; that most of the names mentioned are not, in all moral points, rocks to be shunned; that there are many which might be opposed to them, of men eminently excellent in character, as well as highly gifted in intellect; that the civilization of society at large is the object to be realized by national education, rather than the special training of a few remarkable minds; that the benefits of literature, science, and art are incalculable, and without them civilization cannot exist; that the true parallel is between civilization and barbarism, as the one appears in the most civilized and the other in the most savage races of the earth at this time; that the dangers and mischiefs of ignorance, in such a country as England, are far greater than those of knowledge, if such there be; and, lastly, that, in

answered.

* A shallow and presumptuous writer.—Burke.

endeavouring to raise all over whom we have any influence to the full height of their moral and intellectual stature, we rest firm in the confidence that He who "hath set the world in man's heart," a world which is yet "inferior to the soul," will vouchsafe a blessing upon the exercise of His gifts and vindicate the wisdom of His laws.

Industrial training should be educational rather than pecuniary.

The remarks of Bishop Copleston, quoted in a former page, apply with much force to the practice of teaching special trades to pauper children, and I fear that much misapprehension exists on the subject of industrial training, which seems to be regarded in a pecuniary, rather than in an educational light. A pauper boy may be trained to be a mechanic as well as another, but there is no reason why he should have advantages which another has not. All cannot be mechanics; it seems, therefore, unjust that any should be made such at the public expense; such matters may be left to take their natural course. I conceive that every boy in a pauper school should be rendered as far as possible active and muscular, that he should be led to notice what he sees, to be lively and have his wits about him, and made familiar with the use of all the tools of an ordinary labourer, as far as his years permit. But it cannot concern the community that he rather than another should be made a carpenter or blacksmith, or taught any trade which requires skill. The more extensively pauper boys are employed in fieldwork the better, but it seems to be an unnecessary and an unjustifiable expense to maintain for their benefit half a dozen or more industrial officers, by whose special training they are generally too young to profit much, and perhaps not often rendered more acceptable to tradesmen as apprentices, if apprentices they ought to be. In large schools boys are taught tailoring and shoemaking from motives of economy, in order that they may make their own clothes; but this practice does not stand in need of encouragement. The girls in union schools are usually taught to sew and knit, and trained in some degree to be household servants, but I apprehend that few learn to be cooks or dairy maids. Both boys and girls in a great many instances leave the workhouses prematurely, and before they can have received a proper education either in school, or to qualify them for employment as labourers or house servants. There is a great demand for very young girls to act as nurses.

Main obstacles to progress of education.

The main obstacles to the progress of education are, I conceive, the indifference to the matter prevalent among the working classes, the high wages which young children can often earn, and the reluctance felt obviously by many in the class immediately above them, that the advantages of edu-

cation should be extended. If it were otherwise, there would not be so many unions without schools, nor so many schools with an attendance of children far below what it ought to be. The excessive materialism of our age and country is also an obstacle, not the less felt because those upon whom it operates are often unconscious of its influence. Materialism may be checked by the tone of examination papers, by the character of questions, by indications in various ways that your Lordships attach great importance to subjects to which mere money worshippers attach little or none, and by leading the minds of men gradually to the conclusion that the chief results of education cannot be made palpable to the senses. At present, in some instances, the impression appears to be that, when a building, which any man who goes near it can see, has been completed, the whole work is done, that it matters not who the teacher is, nor even whether the school is entirely or only half filled with children. Where it is necessary to effect a change in men's opinions and habits of thinking, and yet more where it is necessary to ask the poorest to forego pecuniary profits for the sake of advantages to their children, not immediate and very dimly understood, progress must be slow, but such are clearly the difficulties which the friends of education have to meet, and they are not to be overcome by refusing to acknowledge them, and assuming "non causa pro causâ," or a fictitious cause for the real one.

Materialism.

In my last report, I referred at some length to the condition of teachers in union schools. It remains unchanged, and is undoubtedly such as frequently to deter competent persons from accepting employment in any schools for pauper children. One schoolmistress assured me, in the course of the past year, that the governor had called her a liar in the most insulting manner, and closed his fist in her face, which I take to be an assault in law. Respectable and well-educated persons cannot be expected to subject themselves to the risk of such treatment.

Unsatisfactory condition of teachers in workhouses.

The formation of union schools throughout the country in buildings such as those at Newcastle, Tynemouth, and Dewsbury, near the workhouse, but detached from it, would materially alter the position of teachers. Such schools would be found practicable in almost all unions, if out-door pauper children were admitted to them, as well as those in the workhouse, and the schoolmaster might be made exclusively responsible to the guardians for the management of the building, and for all that occurred in it, and thus there would be no longer occasion for collisions with governors. The increased workhouse accommodation thus obtained would be a source of economy, and not of expense to ratepayers, as it would tend to check out-door

Advantages of union schools detached from workhouses.

relief. It is probable, if good schools were organized for all pauper children, and not merely for the fractional portion in workhouses, if working men could be induced to be temperate, if proper dwellings, in which habits of self-respect could be preserved, were provided for the poor, and suitable investments, easily accessible, for their savings, that in another generation adult pauperism might be almost annihilated in the North of England.

Objections to district schools.

Of district schools I have spoken at length in my last report. The long agitation of this question has tended, I fear, to impede the formation of efficient union schools. A brief summary of the chief objections to district schools may not be useless. These are, that, they would tend to contract education when it requires to be very much expanded, as it is certain that if pauper children must be sent a considerable distance to school, all would not be sent who might attend if the school were near; that they are wholly inapplicable to the many unions already very populous, and with a population rapidly increasing, and which ought, therefore, to have schools of their own; that there is ample proof that all the large schools of this description have not been peculiarly successful in emancipating children from pauperism, and that the assemblage of large numbers of children, more especially girls, of the lowest class, some of whom must be familiar with all manner of vice, is a novel experiment, and has already led in several instances to the most deplorable results. It is evident that these children require to be dispersed in schools of moderate size, not collected together in such numbers as to multiply indefinitely the power of mutual corruption, and counteract and paralyse the influence of their teachers.

II.—Ragged Schools.

During the latter part of the year 1856, I inspected for the first time the Bolton, St. Bega's, Hartlepool, Newcastle, Manchester, Soho Street, Liverpool, and Toxteth Park ragged schools. The number of children on the different school-books amounted to 655, of whom 520 were present. No general conclusion can be formed as to the state of education in this class of schools from six visits only, but none of those inspected came up to the level of a good union school, and with the exception of the girls at Toxteth Park, the proportion of children unable to read was large.

Difficulties in management of ragged schools.

Ragged schools are calculated, I think, to effect great good, but their management is subject to peculiar difficulties. At present much that ought to be done by boards of guardians is left to private benevolence, which cannot be

expected to be equal to the work. Some division of labour is necessary; for, after guardians had done all that could fairly be asked from them, a very large number of children would still remain to be educated. A considerable proportion of the children who now attend ragged schools, or who would be likely to attend them if they were extensively multiplied, must have drunken and worthless parents, incapable of appreciating the benefits of education, and who would only be encouraged in their career of vice and improvidence, if their children were taken off their hands. It is too often not the want of money which prevents such persons from doing their duty to their families; for they may possibly earn high wages. No children are more unfortunate, in England at least, than those upon whose heads the sins of their parents are visited, by a comfortless and disorderly home, familiarity with vice in all its shapes, constant want of cleanliness, and occasional want of food, neglect of all education, and neglect of religion. It is well, indeed, if they are not turned into the streets to get, no matter how, a certain sum of money, and beaten if they come back without it. Simply to provide schools for children belonging to this large class may prove but lost labour, the difficulty is to induce the parents and relatives to send the children when the schools are provided. A regular system of district visiting from house to house by religious and sensible persons is likely, I think, to do more good than any other course. Missions, on the plan of the London City Mission, are established in the principal towns of the North of England, but to effect much they must plainly be carried out on a very extensive scale.

Another difficulty incident to ragged schools, to which the attention of your Lordships has been already directed, is the danger of attracting the children from national and other schools, where the parents pay their weekly pence, and where food is not given. It is an essential part of the ragged school system that the children should receive their meals; and the temptation to take advantage of the charity is naturally very great to those who are not really in need of it. Constant care is necessary on the part of managers to prevent abuse, and the real circumstances of the parents, I apprehend, can only be ascertained in each case by frequent visiting from house to house, and not always, perhaps, even by that. It is a great evil, that men who can well afford to pay for their children's education should prefer to spend all the money they can spare, and often more than they can spare, in drink; but it does not seem probable that any good can be done by coercive measures where the moral obligation is not felt. It was said of old of Christianity, "nil nisi justum suadet et lene;" and history

shows that a social reform, to be successful, should be carried out in a merciful spirit and by persuasion alone.

Costliness of ragged schools where children are lodged.

The ragged schools visited are all, with the exception of that at Hartlepool, also refuges, where some of the children sleep on the premises. Such institutions are, in fact, workhouses without adult paupers; but the expenses are so great as necessarily to limit their extension very materially. The treasurer of the Manchester ragged school stated the annual cost to be, at Manchester, 6*l.* 2*s.* 7*d.* per head; at Aberdeen, 4*l.* 9*s.*; at Dundee, 8*l.* 13*s.*; at Edinburgh, 7*l.* 1*s.* 1*d.* Your Lordships have granted to the Manchester school, with an average attendance of 89 children, 359*l.*; to that at Liverpool, with an average of 132 children, 475*l.*; and to the girls' school, Toxteth Park, 153*l.* 10*s.*, average attendance 40. Thus it would seem that the grant per head for each child may exceed 4*l.*, and is not likely to fall below 3*l.* 10*s.*

The publication of the following details relating to the Manchester ragged schools, extracted from the tenth annual Report, published in 1856, may be of use to those who are desirous of establishing similar institutions in large towns.

HISTORICAL SUMMARY of the OPERATION of the MANCHESTER RAGGED AND INDUSTRIAL SCHOOLS during Ten Years.—Established 1846.

Number admitted:—	
Boys	655
Girls	337
Total	992
Condition:—	
Both parents living	449
Fatherless	383
Motherless	90
Orphans	70
Total	992
Occupation before admitted:—	
Matchsellers, beggars, pickpockets, sweeps, and street singers	640
None and various	352
Total	992

Attainments when admitted:—	
Unable to read and write	761
Able to read only	189
Able to read and write	42
Total	992
All admitted accounted for:—	
Returned to beg	128
Removed to Swinton	70
Left the town	114
Gone to work	370
Dead	12
Gone to other Schools	73
Left without reason	132
On the books	93
Total	992

DAILY OCCUPATION of the CHILDREN in the INSTITUTION.

Inmates lodged and fed in the institution, nine in number, rise at six o'clock in the morning to prepare the rooms for the business of the day. The remainder of the children assemble at seven o'clock a.m.; wash themselves, and breakfast at eight, which consists of cocoa, or coffee, and bread; after which reading of the Scriptures, religious instruction, and prayer. From nine until twelve they are taught reading, writing, spelling, arithmetic, geography, &c. Dinner at half-past twelve. From one till half-past, wash themselves, and recreation in the playground. From half-past one till half-past four they are employed in various industrial occupations, such as sorting bristles for brush-makers, making paper and canvas bags for tea and coffee dealers, grocers, confectioners, &c., winding bobbins for weavers, clog and shoe making, tailoring, and printing; the girls in knitting, sewing, and household work. From half-past four until five oral instruction, singing, and

prayer. They are then dismissed, each receiving a piece of bread. At six o'clock all the inmates of the institution assemble for family worship, after which they have tea, when the remainder of the evening is spent in reading books from the school library and self-improvement, and at nine they retire to rest.

The above account was drawn up, and the books of the institution were examined, audited, and found correct, this 22nd day of September 1856, by

(Signed) { Charles Pountney, *Accountant.*
{ James Samuels.

I extract from the eighth annual report of the Liverpool ragged school union some particulars respecting the class of children who attend the Liverpool ragged schools, stated to be thirty-four of all descriptions, at the commencement of the year 1856. It appears that the children receive their dinners at three schools only, two of which I have inspected; they are thus described in brief notes on each school:—

Class of children who attend ragged schools.

"Thieves, outcasts, ragged children, lowest of labourers' children, chip and grit sellers, labourers' children, young persons now at work and not able to pay, rope-workers, sweeps, beggars, homeless, hawkers, cinder gatherers, the very poorest of all grades of low life, wild, vicious, rude boys, the very lowest of society, children of prostitutes, very poor neglected children, very bad boys, children of beggars, scavengers, gypsies, wanderers, children found in the gutters, the very lowest that can be found, girls of the worst class, vagrant and homeless."

If such be the condition of multitudes in our great commercial seaport, where so many zealous and excellent men have exerted themselves so earnestly and so long for the welfare of their fellow-creatures, the torrent of juvenile vice and misery to be purified throughout this country must be vast. Very many, it is plain, have never been reached by the influences of Christianity and civilization, and the work to be accomplished is far beyond the resources of private benevolence.

III.—Reformatories.

I inspected five reformatories in the year 1856, viz., Bradwall, in Cheshire; the Akbar frigate, moored in the Mersey; Castle Howard, and Calder Farm, Yorkshire, for boys; and the Toxteth Park reformatory for girls. The numbers on the books were 124, and none were absent at the time of examination. The boys appeared to be making fair progress at all the institutions visited, and on board the Akbar to be particularly well trained, but the girls at Toxteth Park reformatory were in a low state. In this instance the arrangements of the building are very defective, and, as the property was stated to be in Chancery, much difficulty was experienced in obtaining power to make the requisite alterations. I conceive, however, that it is easier to reform boys than girls, who have a deeper sense of shame, which renders them more reckless when they have gone far wrong, and generally less intellectual energy.

Zeal and humanity of managers of ragged schools and reformatories, contrasted with indifference of many guardians.

The boys on board the Akbar are taught most efficiently to be sailors; at the other institutions the principal employment is fieldwork; the girls are trained to be domestic servants. The contrast between the indifference of many guardians to the welfare of pauper children who may not have committed any crime, and the zeal and humanity of the managers of

reformatories on behalf of those who are deeply criminal, cannot fail to strike any one who goes to a reformatory from a workhouse. The same remark applies also to the managers of ragged schools. An inspector in both these instances has to deal with persons simply anxious to do good, not with pertinacious opponents of the most obviously useful measures, or with those who meet all remonstrances with a chilling indifference yet more hopeless. It is true that some managers of ragged schools and reformatories may also be guardians, but in the latter capacity they are liable to be overwhelmed and outvoted by numbers.

Reformatories likely to succeed;

I conceive that reformatories are likely to succeed to a great extent, especially if habitual veracity is made a primary object in every instance, and that a large majority of those who are admitted into them, of the boys at least, may be rendered upright and useful members of society. The zeal already manifested in the cause is the first element of success. But the question has two sides, and the reformation of individual criminals, most desirable as it is, is only one of them. Here also the soundness of Bishop Copleston's principle, that in all such matters the first point to be considered is what is due to the public, will, I think, become manifest. Reformatories, as now managed, are not places of punishment in any sense of the term. The regulation that the parents of convicted children are to be held responsible for a part of their maintenance, seems to be the only one of a penal character, if to oblige parents to contribute to the education of their children can be called penal. But I find it stated by Mr. Mansfield, stipendiary magistrate of Liverpool, at a meeting of the subscribers to the Liverpool Juvenile Reformatory Institution, held in January in the present year, that "the small sum which had been collected from parents was perfectly ridiculous." He moved accordingly the following resolution: "That this meeting, convinced of the wisdom of the provision of the Act of Parliament for holding the parents of convicted children peculiarly responsible for a part of the maintenance of their children when under reformatory treatment, is anxious to press upon the Government the propriety of making more efficient arrangements than at present exist for carrying the intention of the legislature into effect." Mr. Mansfield at the same time stated, that, "nothing could be more gratifying than what he had heard from the best authority as to the diminution in the number of juvenile offenders." But the question of justice to society still remains. These institutions might bear different names according to the different points of view whence they are regarded. With reference to the indi-

not penal institutions.

Question of justice to society.

viduals who enter them, they might be justly called reformatories, but with reference to society rather boarding-schools. The boys are better off, I think, than in any pauper school, and subject to no greater restraint than ordinary school-boys, most of whom would probably not go to school if they were allowed a choice in the matter. The children in reformatories are treated with the greatest kindness, real in every case, whether uniformly felt to be such or not; ample opportunities of instruction and improvement are offered them, such as no others of their class can command from twelve or thirteen to seventeen or eighteen years of age, the period when the mind advances most rapidly and can profit most by education. Even if the standard in school should be low, and confined to a few subjects, an intelligent lad must have leisure for improvement occasionally during winter evenings and at other times, when to check him would be cruel, and have a pernicious influence on his character. It appears to me very necessary to consider what effect all these circumstances are likely to have upon the working classes when they become known, and when the advantages of education are duly understood and appreciated.

It will be generally acknowledged, I suppose, that it is unjust to teach trades to children in reformatories, or to give them such an intellectual education as would raise them above the necessity of manual labour;* that the object in view is to make them useful agricultural labourers, sailors, soldiers, or domestic servants, and above all to impress upon them the distinction between right and wrong, to give them a sound moral and religious education, not that kind of knowledge which has a marketable value. I conceive that an education is practicable, really excellent, but not convertible into money as mechanical skill is. If reformatories should be generally established, the treatment of children in them will soon be known to the criminal classes, and if great caution is not exercised, it is possible that young persons may commit crime in order to render themselves eligible for admission. It is thus conceivable that crime may increase, although the number of individuals reformed may regularly increase, and,

---

* Mr. Latham, who has organized the Bradwall Reformatory, in Cheshire, on his own estate, has permitted me to make the following extract from a letter which he addressed to me :—

"I confess that I am not anxious for a very great amount of schooling for criminal boys, certainly not more than boys in their condition of life who have remained honest are likely to get. It is rather to raise them morally than intellectually that we are trying; and though the intellectual helps to lift up the moral, yet I scarcely think that it should be highly cultivated at the expense of a suspicion of unfairness."

under such circumstances, society would not be a gainer but a loser by its own benevolence. The difficulties of the question are serious, but it seems to me that it should be considered, not on the ground of what it may be for the interest of society to do but on the broad principle of justice to all classes, as the one least likely to mislead. If reformatories are expected to be efficient, and to deserve their name, fear cannot be made the ruling motive of action; if they are to have an influence on crime generally, they ought to be penal, and to deter by example. Some light may be thrown upon the point of what it is just to do by taking a simple case. Two ragged, hungry, penniless boys are wandering about the streets of a large town; they pass by a baker's shop, one patiently, the other, with less self-denial, seizes a loaf of bread, and runs away with it. The thief is arrested by the police, convicted before the magistrates, and sent to a reformatory. The honest boy has his honesty for its own reward. At the end of some five years, the two boys meet again, the thief well fed, well clothed, and in a good situation; the honest boy, whose education has been neglected, and who is in every respect worse off, cannot help saying to himself, "I should not have been as I am now if I had stolen the bread like him." It may be well to remark, as Archbishop Whately has done, that the maxim, "'Honesty is the best policy,' is one which perhaps nobody is ever habitually guided by in practice; an honest man is always *before* it, and a knave is generally *behind* it." But it is surely an evil of no small magnitude, if reflections on the disadvantages of honesty are forced upon the mind of any one, not by the inscrutable dispensations of Providence, but by the operation of human laws. It may not be a popular doctrine to maintain at the present moment, but there are many considerations tending to prove that the first object of punishment is retribution, and example only the second. It has been said that the distinction between accidental and intentional injury seems peculiar to man, and it is in the latter case alone that a desire for the punishment of the offender arises in any well-governed mind. A man in the habit of analysing his own feelings must acknowledge, I conceive, that he derives a certain satisfaction from hearing that a just sentence has been passed upon a great offender whom he has never seen, and that simply because a criminal has met with his deserts; the reflection, that others will be deterred by his punishment from similar acts, is not that which first occurs. The familiar expression, "It served him right," in ordinary use when any one suffers from the consequences of his own vice or folly, shows that this is the common feeling of

Primary object of punishment, retribution.

mankind. I conceive that this feeling of simple satisfaction at the punishment of vice and crime subsists, or has subsisted, in every civilized country, and is therefore a natural law, intended by Providence to protect the individual and to protect society, and which cannot be violated without mischievous consequences. In the New Testament, punishment by the civil ruler is recognized as simply retributive, and without any reference to example, in the following passage:—"If thou do that which is evil, be afraid; for he beareth not the sword in vain; for he is the minister of God, a revenger to execute wrath upon him that doeth evil."—Rom. xiii. 4. I have been induced, my Lords, to say thus much, because I fear that there is at the present day a certain spurious humanity, which, while it attempts to set itself above the natural feelings of mankind, may possibly end by sinking beneath them, as indulgence to vice is quite compatible with severity to virtue, and because the reformation of criminal children, most desirable as it is, would be too dearly purchased, if it should be so accomplished as to cause those who are not criminal to consider themselves unjustly treated.

Difficulties in management of reformatories.

There are two difficulties inherent in the management of reformatories as at present constituted; in the first place, there is little or nothing about them to deter from crime; and, secondly, the condition of young offenders admitted into them is most materially improved, as a direct consequence of the commission of crime. It is possible that reformatories might have a deterring effect if they were limited exclusively to the Scotch islands, or the Isle of Man, as I conceive that young criminals would generally feel a repugnance to quit their own neighbourhood, and to go to a considerable distance, apart from all their old associates. The total disruption of all such ties, however, would render their reformation more probable. It is well that they should have nothing to remind them of their previous career, and in producing this result distance exercises a natural influence. But I do not see at present how their treatment in reformatories can be materially altered. To the question, Is it just that the condition of any persons should be improved as a direct consequence of the commission of crime? it might be answered that it is the duty of the State to make the people better; but this principle has never been distinctly recognised, as far as I know; and if it were acknowledged it would involve most extensive obligations, because prevention is better than cure, and the claim on society of those who are on the verge of crime, but have not committed it, is naturally prior to that of felons. The case of criminal children is essentially distinct from that

Should condition of any persons be improved in consequence of their crimes?

of pauper children, who are seldom, if ever, personally responsible for their pauperism, as ragged children are seldom responsible for their rags; but it cannot be denied that the criminal child, notwithstanding all that may be said as to extenuating circumstances, has incurred some personal guilt; many, in fact, have been repeatedly convicted, and after their first conviction must have known that they were doing wrong. Therefore, as it seems to me, children equally destitute, equally miserable, but who have not violated the law, have a better claim on society than the thieves, although I would not for a moment maintain that the claims of any ought to be disregarded. It may be said that young thieves prey upon society, and that those who cost most must be attended to first; but such remarks, however accurate as to facts, are irrelevant when the question is one of justice.

Those who have not violated law have first claim on society.

I have endeavoured, in this report, to investigate the principles of the question, because reformatories are novel; because it is useless, and must in the end be mischievous, to slur over difficulties, not likely, perhaps, to strike any persons more forcibly than those who come practically into contact with them, and because, in such matters as these, I cannot but feel that I incur a responsibility which is not solely of an official character.

I have the honor to be, &c.

T. B. Browne.

To the Right Honorable
The Lords of the Committee of Council on Education.

Appendix A.

Dear Sir, *Chorlton Union Workhouse,* 12 *February* 1857.

In compliance with your request, I herewith furnish you with an account of the fieldwork done by the boys of this workhouse during the year ending 31st December 1856, and am sorry that I have not been able to send it earlier. As it is the first year of our agricultural operations, I respectfully beg permission to make a few observations in reference to the account I now enclose.

The portion of ground cultivated by the boys is about one and a half acres in extent, and is entirely apart from that whereon the adult paupers are employed. The crops grown last year were, potatoes, carrots, turnips, beet, parsnips, onions, leeks, cabbages, savoys, cauliflowers, peas, beans, and celery. The average number of boys employed was, mornings, 15; afternoons, 10; total daily average, 25; time employed, 5 hours a day. As you are aware, Sir, these boys have been instructed by a paid superintendent, whose whole time is devoted to them.

Our profits have not been nearly so great this year as it is believed they will be in future; for, owing to the proximity of the land to the house, it was continually carted across during the erection of the building, and was in a very bad state when the boys commenced operations upon it.

You will observe, Sir, that I have given the estimated rental of the land, but have not put in the salary of the superintendent, as that is repaid by Government

I ought also to add that during the potato harvest the boys were employed for some time in gathering potatoes from land that had been recently purchased by the guardians; so that if their labour on that occasion is taken into consideration, it will increase the amount of profit by at least 5*l.*

In conclusion, I beg to observe that the gardening account does not exhibit the whole of our industrial training, for in addition to the twenty-five boys thus employed, we have ten lads learning tailoring, two shoemaking, two painting, and two baking; and the whole of these are taught their various trades by *paid* instructors, and not by inmates.

I remain, &c.

T. B. Browne, Esq., (Signed) Wm. J. Johnson,
Her Majesty's Inspector of Union Schools, &c. Schoolmaster.

Appendix B.

Sir, *Harraby Hill Industrial Schools, Carlisle*, 12 *February* 1857.

In reply to your kind favour of the 7th inst., and in compliance with your request therein contained, I have now the pleasure of enclosing a statement of the field account and pig account respectively for the year ending March 27th, 1856, the account being always made up to that period. The extent of land attached to the workhouse is not quite three acres, too little to admit of raising a succession of crops; consequently it is confined to the growing of potatoes, onions, cabbages, and potherbs, of which the greater portion is consumed in the house. Twenty boys on an average are employed in the cultivation of the land, the eldest fourteen, youngest ten; boys under that age are not able to dig, but can make themselves very useful in other respects, such as weeding, gathering stones, forking, clearing the growing crops, &c. The field boys I have formed into a class, called the field class, composed of three sections, and the boys in each section are sent out alternately on the forenoon and afternoon of each day, thus enabling those not engaged in the field to be in attendance at school. The employment of boys in cultivating land is, I think, very desirable, and produces a good effect; it not only invigorates, but renders them eligible for out-door employment at farms on leaving the workhouse. There are, besides, most important advantages resulting from such occupations; for instance, we notice the great improvement in the physical condition of the boys from being out in the fresh air, and the inducement afforded to farmers to employ them from their ability to use the spade and other agricultural implements. Several boys so qualified have left this workhouse, and are, I am glad to say, doing well in the service of farmers and others in the neighbourhood. The labour in the field is under the able superintendence of Mr. G. Wilkinson, the porter.

I remain, &c.

T. B. Browne, Esq., (Signed) Charles H. Watson.
Her Majesty's Inspector of Union Schools. Schoolmaster.

Tabulated Reports, by Her Majesty's Inspector of Schools, T. B. Browne, Esq., on the Parochial Union Schools, and also on the Ragged Schools and Reformatories, inspected by him in the Northern District, during the Year 1856.

Date.	Name of School.	In Attendance.	Present.	General Observations.
1856.	NORTHUMBERLAND			
July 22 -	Alnwick:			
	Boys - -	12	4	The children passed a tolerable examination, but were deficient in arithmetic. I am sorry to observe that the number of children educated here has decreased.
	Girls - -	25	11	
	Infants -	–	7	
July 18 -	Belford - -	–	–	No children in the workhouse.
Aug. 21 -	Bellingham:			
	Boys - -	3	3	The children go out to school. They appeared unaccustomed to think and to exercise their minds. Separation from adult paupers imperfect.
	Girls - -	5	5	
	Infants -	–	–	
July 21 -	Berwick-upon-Tweed:			
	Boys - -	27	21	The elder children showed in several instances considerable liveliness and intelligence. Most of the children present in the senior school could read and write, and the infants appeared to have improved.
	Girls - -	51	47	
	Infants -	56	36	
July 24 -	Castle Ward:			
	Boys - -	2	2	The children receive some instruction from the governor. They were in a low state, but all very young.
	Girls - -	4	4	
	Infants -	3	3	
July 18 -	Glendale:			
	Boys - -	6	6	The children are instructed by the governor. They were not advanced at the date of my visit, but the style of reading was distinct.
	Girls - -	9	9	
	Infants -	–	–	
July 16 -	Haltwhistle:			
	Boys - -	2	2	The children go out to school. They were ignorant, and had made but moderate progress.
	Girls - -	2	2	
	Infants -	2	1	
Aug. 20 -	Hexham:			
	Boys - -	30	29	Great improvements have been made in the schoolrooms, and generally in the accommodations for both teachers and children. The boys passed a creditable examination; the girls were deficient in animation and intelligence.
	Girls - -	22	22	
	Infants -	12	12	
July 17 -	Morpeth:			
	Boys - -	4	4	This workhouse does not admit of proper classification. The children go out to school. Their state, as on former occasions, was far from satisfactory.
	Girls - -	4	4	
	Infants -	4	4	
Mar. 3, - Aug. 22.	Newcastle-upon-Tyne:			
	Boys - -	80	79	A large building detached from the workhouse, with an ample extent of land for industrial training, has been provided for the children; but at the date of my visit the schools were very imperfectly filled. The girls were very deficient both in intelligence and information, and their schoolmistress had been a pauper. The boys were much more advanced, but disorderly.
	Girls - -	75	70	
	Infants -	–	–	
July 23 -	Rothbury:			
	Boys - -	1	1	The children go out to school. They were ignorant and in a low state. The workhouse does not admit of proper classification.
	Girls - -	3	3	
	Infants -	–	–	

Date.	Name of School.	In Attendance.	Present.	General Observations.
	NORTHUMBERLAND—*cont.*			
Mar. 4, Nov. 4.	Tynemouth:			
	Boys - -	29	28	There was a great want of spirit and animation about the boys, whose teacher was recently a pauper. The girls were by no means advanced, but showed more liveliness than the boys, and read more distinctly.
	Girls - -	17	17	
	Infants -	16	16	
	CUMBERLAND.			
Aug. 14 -	Alston:			
	Boys - -	4	4	The children go out to school. One little girl appeared intelligent, and could read without spelling. Separation from adult paupers imperfect.
	Girls - -	4	3	
	Infants -	–	–	
July 11 -	Bootle:			
	Boys - -	10	10	The children, who go out to school, passed but a moderate examination. One girl, who knew nothing of arithmetic, did not attend school.
	Girls - -	3	3	
	Infants -	–	–	
July 25 -	Brampton:			
	Boys - -	5	5	The children go out to school. Several could read tolerably; but the boys were deficient in arithmetic. They were, however, all young. They had not, apparently, been led to think sufficiently, and to notice common things.
	Girls - -	5	5	
	Infants -	6	5	
Aug. 13 -	Carlisle:			
	Boys - -	56	53	Excellent school-rooms have now been provided here. The children were very orderly, but could not be considered advanced at the date of inspection.
	Girls - -	39	37	
	Infants -	–	–	
July 8 -	Cockermouth:			
	Boys - -	32	29	The children in the senior school passed a very tolerable examination, but the infants were in a low state and disorderly.
	Girls - -	13	12	
	Infants -	43	38	
July 15 -	Longtown:			
	Boys - -	16	10	School mixed. The children passed an examination very creditable to their master, and were very orderly and well-behaved.
	Girls - -	19	12	
	Infants -	–	11	
Aug. 15 -	Penrith.			
	Boys - -	36	35	The girls passed a very fair examination, but the state of the boys, with two exceptions, was unsatisfactory.
	Girls - -	30	30	
	Infants -	–	–	
July 10 -	Whitehaven:			
	Boys - -	67	62	A new workhouse was building at the date of my visit. The children appeared to be making very fair progress in both schools. The girls had manifestly improved.
	Girls - -	57	48	
	Infants -	–	–	
July 9 -	Wigton:			
	Boys - -	18	17	Here the master teaches the elder children and the schoolmistress the younger. The boys were decidedly more advanced than the girls.
	Girls - -	12	12	
	Infants -	13	13	
	DURHAM.			
Oct. 31 -	Auckland:			
	Boys - -	4	4	The children were by no means advanced, and the numbers in attendance had very strangely diminished, although they were in a new workhouse. A schoolmistress has been appointed since my visit.
	Girls - -	3	3	
	Infants -	3	3	
June 5 -	Chester-le-street:			
	Boys - -	11	4	The children go out to school. They had not made much progress. A new workhouse was in building here in June last.
	Girls - -	7	4	
	Infants -	–	10	
May 1 -	Darlington:			
	Boys - -	15	10	School mixed. The state of the children was creditable to the teacher, who appeared painstaking and attentive to her duties.
	Girls - -	21	13	
	Infants -	–	8	

Date.	Name of School.	In Attendance.	Present.	General Observations.
	DURHAM—*cont.*			
June 4 -	Durham:			
	Boys - -	9	9	School mixed; teacher a schoolmistress. Several of the children appeared intelligent and accustomed to exercise their minds. The style of reading was good and distinct. The boys are employed in garden work.
	Girls - -	4	4	
	Infants -	13	11	
June 6 -	Easington:			
	Boys - -	5	5	The children go out to school. They had not made much progress. They were deficient in arithmetic, and had not learned to exercise their minds sufficiently.
	Girls - -	4	4	
	Infants -	–	–	
Aug. 25 -	Gateshead:			
	Boys - -	59	52	The school-room was far too crowded, and consequently much could not be expected from the children, but the schoolmaster deserves credit for what he has effected.
	Girls - -	30	25	
	Infants -	–	–	
Aug. 27 -	Houghton-le-Spring:			
	Boys - -	–	–	The children were mere infants who could not read. If there were a proper workhouse, and the workhouse test were carried out, there ought to be a considerable school in this union.
	Girls - -	–	–	
	Infants -	3	2	
June 3 -	Lanchester:			
	Boys - -	4	3	The children, who go out to school, were evidently very ignorant, and unaccustomed to think and exercise their minds.
	Girls - -	2	–	
	Infants -	–	–	
June 9 -	Sedgefield:			
	Boys - -	2	2	The children here were very young. They go out to school. Two children could read, and one appeared intelligent. Classification defective.
	Girls - -	1	1	
	Infants -	–	–	
Nov. 5 -	South Shields:			
	Boys - -	12	12	School mixed. The method of the schoolmistress appeared to be good, but the state of the school was low, and the children had not learned to think.
	Girls - -	11	11	
	Infants -	7	7	
Mar. 6, - Nov. 6.	Stockton:			
	Boys - -	24	16	School mixed. The children were very deficient in every respect, more especially in arithmetic; they were also very disorderly.
	Girls - -	24	13	
	Infants -	–	19	
Mar. 5, - Aug. 26.	Sunderland:			
	Boys - -	36	34	The boys have improved greatly in this workhouse since the appointment of a trained master from Kneller Hall. They showed considerable intelligence and information. The state of the girls was also fair.
	Girls - -	26	24	
	Infants -	–	–	
May 2 -	Teesdale:			
	Boys - -	18	18	The children go out to school. They were all very ignorant, with the exception of one boy. Their attendance at school was stated to be very irregular.
	Girls - -	10	9	
	Infants -	–	–	
Nov. 3 -	Weardale:			
	Boys - -	4	2	The children go out to school. They were in a low state. The most advanced boy did not understand what he read.
	Girls - -	3	1	
	Infants -	–	4	
	WESTMORELAND.			
Aug. 19 -	East Ward:			
	Boys - -	24	22	This school was some years since good, but it has now fallen off materially. The children were deficient in arithmetic, in general information and intelligence, and not orderly.
	Girls - -	12	11	
	Infants -	–	–	

Date.	Name of School.	In Attendance.	Present.	General Observations.
	Westmoreland—*cont.*			
June 26 -	Kendal:			
	Boys - -	48	48	The state of the boys here was fair, but they did not speak out sufficiently, and appeared dull. A pupil-teacher has been appointed. The girls had fallen off in consequence of the death of the schoolmistress.
	Girls - -	19	19	
	Infants -	17	15	
July 14 -	West Ward:			
	Boys - -	2	2	The children in school were not advanced, but a fair proportion of them could read tolerably. The school-room is very low.
	Girls - -	13	13	
	Infants -	10	10	
	Yorkshire, N. R.			
June 2 -	Bainbridge:			
	Boys - -	5	5	There is no school here, and the workhouse does not admit of proper classification. Of the children present one boy only could read fairly and write his name.
	Girls - -	3	2	
	Infants -	-	-	
May 30 -	Bedale:			
	Boys - -	9	9	The children, who go out to school, were deficient in arithmetic, but in other respects they passed a fair examination. Their general appearance was pleasing, and creditable to those who have the charge of them.
	Girls - -	4	4	
	Infants -	-	-	
June 10 -	Easingwold:			
	Boys - -	9	7	School mixed. There was a want both of information and of intelligence about the children. Method of the teacher very moderate.
	Girls - -	11	9	
	Infants -	-	1	
Nov. 7 -	Guisborough:			
	Boys - -	2	2	The children receive some instruction from a pauper. They were extremely ignorant in every respect. None could read or write.
	Girls - -	3	3	
	Infants -	-	-	
Nov. 12 -	Helmsley:			
	Boys - -	2	2	The children go out to school. None could read or write, or say who Jesus Christ was. No separation from adult paupers.
	Girls - -	1	1	
	Infants -	-	-	
Nov. 12 -	Kirkby Moorside:			
	Boys - -	1	1	The style of reading here was distinct, but the children were in a low state in other respects. The schoolmistress refused to be examined.
	Girls - -	6	6	
	Infants -	2	2	
June 2 -	Leyburn:			
	Boys - -	3	3	The children, who go out to school, were in a low state, and had made but little progress. Religious knowledge very moderate.
	Girls - -	2	2	
	Infants -	5	5	
Feb. 20, - Nov. 13.	Malton:			
	Boys - -	14	14	The girls here were going on very fairly, and likely to improve, although but few could read at the date of my last visit. The boys had not learned to exercise their minds, and the schoolmaster evidently wanted method.
	Girls - -	13	13	
	Infants -	12	12	
May 30 -	Northallerton:			
	Boys - -	5	5	The children, who go out to school, passed a tolerable examination. One boy appeared decidedly intelligent. The children are not separated from adult paupers.
	Girls - -	6	6	
	Infants -	-	-	
Feb. 18 -	Pickering:			
	Boys - -	6	6	The children are all taught by a schoolmaster. State of the school moderate.
	Girls - -	9	9	
	Infants -	-	-	

Date.	Name of School.	In Attendance.	Present.	General Observations.
	YORKSHIRE, N.R.—*cont.*			
May 6 -	Reeth:			
	Boys - -	3	3	The children go out to school. They were extremely ignorant. None understood the Lord's prayer, although two girls, as it was stated, had been at least four years at school.
	Girls - -	3	3	
	Infants -	–	–	
May 5 -	Richmond:			
	Boys - -	7	7	School mixed. The religious knowledge and general attainments of the children were unsatisfactory. Their attendance at school was stated to have been irregular.
	Girls - -	3	3	
	Infants -	–	–	
April 9 -	Scarborough:			
	Boys - -	3	3	The children in this workhouse were remarkably dull and ignorant. One out of those present could read.
	Girls - -	5	3	
	Infants -	–	–	
Nov. 7 -	Stokesley:			
	Boys - -	7	7	The children go out to school. They passed a fair examination, and apparently had been well taught. One boy, stated to be under ten years of age, was remarkably intelligent, and worked decimals and extracted the square root with ease and correctness.
	Girls - -	2	2	
	Infants -	1	1	
May 7, -	Thirsk:			
Oct. 30.	Boys - -	9	9	School mixed. The children passed a tolerable examination, but the girls were decidedly inferior to the boys.
	Girls - -	8	7	
	Infants -	7	7	
Feb. 19 -	Whitby:			
	Boys - -	9	8	School mixed, and not advanced. The teacher has a good method, but had not been appointed long enough to effect much at the date of my visit.
	Girls - -	11	9	
	Infants -	–	2	
	YORKSHIRE, E.R.			
April 7 -	Beverley:			
	Boys - -	7	7	The children, who go out to school, passed a fair examination, and appeared to be making tolerable progress.
	Girls - -	7	7	
	Infants -	–	–	
April 8 -	Bridlington:			
	Boys - -	8	6	The children go out to school, with the exception of one girl. They appeared to have made tolerable progress, but one boy was much more advanced than the rest.
	Girls - -	5	5	
	Infants -	–	–	
April 10 -	Driffield:			
	Boys - -	24	15	A great improvement has been effected in the school here. The children passed an examination very creditable to their teacher.
	Girls - -	13	4	
	Infants -	–	16	
April 11 -	Howden:			
	Boys - -	11	11	The children, who go out to school, were in a low state. Few could read tolerably, and they were very deficient in arithmetic.
	Girls - -	10	10	
	Infants -	–	–	
April 2, 3	Hull:			
Sept. 23.	Boys - -	61	60	The boys' school has been for some time good, and fully sustains its character. The girls were in a bad state of discipline, and deficient in every respect. One boy has been appointed a pupil-teacher.
	Girls -	49	25	
	Infants -	4	21	
Sept. 24 -	Patrington:			
	Boys - -	13	12	State of the school tolerable. An excellent school-room has now been built, and a schoolmistress appointed, whose method of teaching is good; material improvement may therefore be expected.
	Girls - -	9	3	
	Infants -	–	7	

Date.	Name of School.	In Attendance.	Present.	General Observations.
	Yorkshire, E.R.—*cont.*			
une 11 -	Pocklington:			
	Boys -	13	10	School mixed. Teacher a schoolmaster, deficient in method. The children had not learned to think and exercise their minds.
	Girls -	5	4	
	Infants -	–	4	
pril 4 -	Sculcoates:			
	Boys - -	60	58	The boys passed an examination very creditable to their schoolmaster. The girls were certainly not equal to them, but appeared to be making fair progress.
	Girls - -	26	25	
	Infants	13	12	
pril 3 -	Skirlaugh:			
	Boys - -	20	10	School mixed. The children were not in an advanced state, but for the most part very young. Two boys led the school, and, when these were silenced, the others answered but few questions.
	Girls - -	5	2	
	Infants -	–	13	
eb. 15 -	York:			
	Boys - -	33	29	State of the boys fair; of the girls tolerable. The proportion of children able to read and write was considerable in both schools. The girls make and wash their own clothes.
	Girls - -	31	29	
	Infants -	–	–	
	Yorkshire, W.R.			
Iarch 11, Nov. 25.	Barnsley:			
	Boys - -	21	21	The children were in a low state in both schools. It is requisite that they should be taught to think and exercise their minds more than they do.
	Girls - -	17	15	
	Infants -	9	7	
pril 29 -	Barwick:			
	Boys - -	7	7	The attainments of the children, who go out to school, were but moderate. Two of those present answered some simple questions.
	Girls - -	3	3	
	Infants -	–	–	
eb. 13 -	Bierley, North:			
	Boys - -	10	8	The children here were very ignorant, one only could read a little. There will soon be, as I trust, a new workhouse in this union.
	Girls - -	11	4	
	Infants -	–	–	
Iarch 12, ct. 29.	Bradford:			
	Boys - -	71	67	Much has been accomplished for the education of pauper children in this union, and there are good schools in the workhouse for both boys and girls. A third school for infants is now wanted.
	Girls - -	80	37	
	Infants -	13	47	
eb. 28 -	Carlton:			
	Boys - -	3	3	The few children in the workhouse in this populous union are under the charge of a pauper. They were very ignorant, and received no education deserving the name.
	Girls - -	2	2	
	Infants -	5	5	
Iarch 10, ug. 29.	Dewsbury:			
	Boys - -	35	35	Excellent schools, detached from the workhouse, have been built here, but the state of the children was not satisfactory. They were dull and ignorant, and most of them unable to read.
	Girls - -	27	25	
	Infants -	–	–	
ay 16 -	Doncaster:			
	Boys - -	38	37	The boys passed a very fair examination, but appeared to be too much accustomed to collective answering. The girls were far inferior to the boys, but it was stated that their attendance had been irregular on account of illness.
	Girls - -	17	16	
	Infants -	13	10	

Date.	Name of School.	In Attendance.	Present.	General Observations.
	YORKSHIRE, W.R.—*cont.*			
Jan. 16 -	Ecclesall Bierlow:			
	Boys - -	36	33	The girls were in a low state, but the boys appeared to be making creditable progress; their religious knowledge was fair.
	Girls - -	33	19	
	Infants -	1	12	
May 19 -	Goole:			
	Boys - -	12	11	School mixed. Teacher a schoolmistress. The boys are partly under the charge of an elderly inmate. The children were not advanced, and very deficient in arithmetic, but some Scriptural questions were answered tolerably.
	Girls - -	9	8	
	Infants -	5	5	
Feb. 27, & Nov. 24.	Halifax:			
	Boys - -	21	17	The schoolmaster, recently appointed, wants method; but the children passed a fair examination in both schools. The proportion of pauper children educated to the whole population is very small, hardly more than one in 3,000.
	Girls - -	18	14	
	Infants -	16	16	
March 7	Harrogate:			
	Boys - -	15	15	The children, who go out to school, passed a tolerable examination, but very few could read an ordinary book fluently. Separation from adult paupers imperfect.
	Girls - -	–	–	
	Infants -	–	–	
	Hemsworth - -	–	–	No workhouse.
Jan. 24 -	Huddersfield:			
	Boys - -	22	15	The Huddersfield pauper children, now assembled in the Kirkheaton workhouse, go out to school. They were in a low state, and the majority of those present could not read.
	Girls - -	17	10	
	Infants -	–	11	
May 27 -	Keighley:			
	Boys - -	9	9	The children, who go out to school, were very deficient in religious knowledge and in arithmetic. The workhouse does not admit of proper classification.
	Girls - -	2	2	
	Infants -	–	–	
May 27 -	—— Bingley:			
	Boys - -	3	3	This is a district workhouse in Keighley union, in which the children are not separated from adult paupers. They go out to school, but were very ignorant.
	Girls - -	1	1	
	Infants -	–	–	
Feb. 14 -	Knaresborough:			
	Boys - -	–	–	The children, who go out to school, were very ignorant, and particularly deficient in arithmetic. None could read an ordinary book without spelling.
	Girls - -	11	10	
	Infants -	–	–	
Sept. 25, 26.	Leeds:			
	Boys - -	80	76	The children appeared to be making very fair progress in all the schools, but the girls were too much addicted to collective answering. Many more children might be educated in this building, which has never been filled within my knowledge.
	Girls - -	77	68	
	Infants -	64	55	
April 30 -	Ouseburn, Great:			
	Boys - -	5	5	The children in this workhouse were unacquainted with the simplest truths of Christianity. Not one could read. The Lord's prayer was repeated, but not understood.
	Girls - -	6	5	
	Infants -	–	–	

Date.	Name of School.	In Attendance.	Present.	General Observations.
	YORKSHIRE, W.R.—*cont.*			
May 28 -	Pateley Bridge:			
	Boys - -	6	6	The children here, as on former occasions, were deplorably ignorant. None could tell what country they lived in, or work a sum of any kind. The workhouse does not admit of proper classification.
	Girls - -	7	7	
	Infants -	–	–	
	Penistone - -	–	–	No workhouse.
May 21 -	Pontefract:			
	Boys - -	3	3	The children go out to school. They were very deficient in arithmetic, and could not read an ordinary book fluently. A little deserted girl here, three weeks in the workhouse, appeared to be quite ignorant of religion.
	Girls - -	4	4	
	Infants -	–	–	
May 8 -	Preston, Great:			
	Boys - -	5	5	One boy here had made fair progress, but the other children were generally ignorant. They receive some instruction from the governor.
	Girls - -	3	3	
	Infants -	7	7	
Feb. 29 -	Ripon:			
Aug. 28.	Boys - -	8	8	A school has now been organized for the first time in this workhouse; teacher, a schoolmistress, who conducted a class well. The children, in consequence, passed a very fair examination, and appeared lively and intelligent.
	Girls - -	4	4	
	Infants -	6	6	
May 15 -	Rotherham:			
	Boys - -	11	6	All the children are now instructed by the schoolmistress. They were deficient in religious knowledge and in spelling. State of the school in other respects tolerable.
	Girls - -	29	19	
	Infants -	–	12	
Jan. 23 -	Saddleworth:			
	Boys - -	16	10	School mixed. Method of the teacher and state of the school moderate. A better school-room has now been provided.—1857.
	Girls - -	8	6	
	Infants -	–	10	
June 25 -	Sedbergh:			
	Boys - -	3	3	The children go out to school. They were very ignorant. One only could read tolerably.
	Girls - -	1	1	
	Infants -	–	–	
April 1 -	Selby:			
	Boys - -	10	10	The children are now instructed by the governor. Some of their answers were heedless, but they appeared to be going on fairly.
	Girls - -	3	3	
	Infants -	–	–	
June 24 -	Settle:			
	Boys - -	18	18	The boys were lively and intelligent, and passed a fair examination. The girls were less advanced, but four only were present.
	Girls - -	4	4	
	Infants -	4	4	
Jan. 17 -	Sheffield:			
Sept. 5.	Boys - -	62	47	The boys here had acquired a very fair degree of information, at my last visit, especially on religious subjects. The girls were generally less advanced, and deficient in arithmetic.
	Girls - -	50	39	
	Infants -	–	–	
Feb. 12 -	Skipton:			
	Boys - -	9	9	Some of the boys who go out to school appeared intelligent, and answered several simple questions fairly, but what is done for the education of destitute children here is really insignificant.
	Girls - -	3	3	
	Infants -	–	–	
	Tadcaster - -	-	-	No workhouse for children.
May 20 -	Thorne:			
	Boys - -	18	14	School mixed; teacher a schoolmistress, deficient in method. The children were dull and inanimate, and their attainments of a low order. Classification of inmates imperfect.
	Girls - -	12	9	
	Infants -	–	7	

Date.	Name of School.	In Attendance.	Present.	General Observations.
	Yorkshire, W.R.—*cont.*			
Feb. 21 - Sept. 22 -	Wakefield:			
	Boys - -	22	18	The children were not advanced, but they appeared to be making fair progress, and likely to improve. The boys are employed in field-work.
	Girls - -	22	15	
	Infants -	–	9	
May 14 -	Wortley:			
	Boys - -	10	6	School mixed; teacher a schoolmistress. The children passed a very tolerable examination, and had improved since my previous visit.
	Girls - -	9	7	
	Infants -	–	6	
	Lancashire.			
June 12 -	Ashton-under-Lyne:			
	Boys - -	37	37	School mixed. The children were generally in a low state, and the majority present could not read. Another school-mistress has been appointed since my visit.
	Girls - -	22	21	
	Infants -	–	–	
Jan. 14 -	Barton:			
	Boys - -	1	1	The children are sent to Swinton from this workhouse. Of those present none could read without spelling.
	Girls - -	6	6	
	Infants -	–	–	
Feb. 11 - Dec. 29.	Blackburn:			
	Boys - -	39	39	The children passed a tolerable examination at my second visit. Both boys and girls had improved. A new workhouse will, I hope, soon be built in this union.
	Girls - -	28	18	
	Infants -	6	14	
Feb. 22 - Sept. 1.	Bolton:			
	Boys - -	11	10	The children had improved greatly at my second visit. They were orderly, lively, and intelligent, and had been evidently well-taught, a school-mistress, with a good method of teaching, having been appointed in the interval.
	Girls - -	16	16	
	Infants -	16	16	
May 12, Dec. 26.	—— Turton:			
	Boys - -	48	45	The boys here are making fair progress. At my second visit it appeared that the master had lost nearly all his first class. The girls have been removed to Bolton.
	Girls - -	22	21	
	Infants -	12	9	
April 18 -	Burnley:			
	Boys - -	7	7	School-mixed; teacher a schoolmaster. The children present were very dull and ignorant.
	Girls - -	–	–	
	Infants -	6	6	
Jan. 18 -	Bury:			
	Boys - -	1	1	The children, who go out to school, were very ignorant, and in a very low state. One only could read without spelling.
	Girls - -	3	3	
	Infants -	4	4	
	Caton - - -	–	–	Not visited. I was informed that the workhouse had been burnt down.
Jan. 21 -	Chorley, Brindle:			
	Boys - -	17	17	The children go out to school. They were very ignorant, and had made but little progress in any respect. Separation from adult paupers imperfect.
	Girls - -	5	5	
	Infants -	–	–	
April 28 - Sept. 10.	Chorlton:			
	Boys - -	84	79	The children, both boys and girls, passed an examination very creditable to their teachers, and showed much intelligence and information. The boys are employed in field-work, and the arrangements for industrial training are excellent.
	Girls - -	73	60	
	Infants -	–	–	

Date.	Name of School.	In Attendance.	Present.	General Observations.
	LANCASHIRE—*cont.*			
April 17 -	Clitheroe, Aighton:			
	Boys - -	6	6	The children, who go out to school, did not read distinctly. None understood the Lord's prayer.
	Girls -	4	4	
	Infants -	–	–	
April 17 -	—— Holden:			
	Boys - -	5	5	Another Clitheroe workhouse. The children go out to school. They were especially deficient in arithmetic. None had made much progress. No separation in these two workhouses from adult paupers.
	Girls - -	2	2	
	Infants -	–	–	
April 16 -	The Fylde:			
	Boys - -	9	9	The children, who go out to school, appeared very dull and ignorant. Religious knowledge very moderate.
	Girls - -	9	9	
	Infants -	–	–	
	Garstang - -	–	–	No workhouse for children.
Jan. 25 -	Haslingden:			
	Boys - -	7	6	The children, who go out to school, were very ignorant, and had made very little progress in any respect. None understood the Lord's prayer. Classification defective.
	Girls - -	–	–	
	Infants -	–	–	
April 21 -	Lancaster:			
	Boys - -	20	19	The children, who go out to school, passed a fair examination. There was a remarkable disproportion between the numbers of boys and girls.
	Girls - -	7	5	
	Infants -	5	3	
Feb. 8 -	Leigh:			
	Boys - -	29	17	School mixed, teacher a schoolmaster. I found the children making very fair progress, and improved decidedly since my last visit.
	Girls - -	28	22	
	Infants -	–	16	
Feb. 25, 26, Oct. 20, 21.	Liverpool:			
	Boys - -	142	126	The progress of the children in this workhouse was generally creditable to the teachers; but a large majority could not read; and a high standard cannot be attained on account of the very frequent changes among the children.
	Girls - -	161	129	
	Infants -	118	102	
Oct. 6, 7, 8, 9, 10. Dec. 4, 5.	—— Kirkdale:			
	Boys - -	489	452	The boys passed a good examination, although the style of reading of some of them was rather careless. The girls appeared to be making fair progress, but were generally less advanced than the boys. The guardians have materially diminished the numbers of children in attendance.
	Girls - -	307	285	
	Infants -	–	–	
Sept. 12 -	Manchester:			
	Boys - -	75	76	Allowing for the frequent changes here, the children passed a fair examination, but a large majority could not read. The girls were also deficient in arithmetic, and very inferior to the boys. A new workhouse is in building.
	Girls - -	40	34	
	Infants -	17	12	
Sept. 9	—— Canal Street:			
	Boys - -	39	39	This school ranks somewhat below that in the Manchester workhouse. The changes among the children are very frequent. Decided progress had, however, been made in reading, writing, and arithmetic since my visit in 1855.
	Girls - -	27	27	
	Infants -	72	72	
Sept. 15, 16, 17, 18, 19. Dec. 2, 3.	—— Swinton:			
	Boys - -	338	314	The children passed an examination creditable to their teachers in all the schools, and the numbers present for the first time exceeded 800, but the institution is still not filled. The industrial training is good.
	Girls - -	205	197	
	Infants -	293	292	

Date.	Name of School.	In Attendance.	Present.	General Observations.
	LANCASHIRE—*cont.*			
Jan. 22, Sept. 11.	Oldham:			
	Boys	48	47	The children were not advanced, but they passed a fair examination in both schools, and are likely to improve, if they remain at school long enough. The boys dig.
	Girls	41	18	
	Infants	–	20	
Feb. 7, Oct. 13.	Ormskirk:			
	Boys	13	10	The education of the children here is evidently checked by the singular importance which the guardians attach to knitting. The schoolmistress had, however, succeeded in effecting some improvement. The children were deficient in arithmetic and penmanship at my second visit, but a greater number could write and work sums.
	Girls	15	10	
	Infants	–	5	
Jan. 11, Dec. 31.	Prescot:			
	Boys	33	27	School mixed, teacher a schoolmaster. The children passed a tolerable examination, but they require to be questioned more closely as to the meaning of the words and sentences which they read.
	Girls	20	12	
	Infants	–	–	
June 23 -	Preston:			
	Girls	2	2	This is a school for infants, recently established in the Preston workhouse. No infants could read or write, but the schoolmistress gave a fair object lesson, and several simple questions were answered.
	Infants	49	43	
March 14, Oct 24.	Preston, Penwortham:			
	Girls	37	37	The girls were very deficient in arithmetic, and generally in a low state. Few could read an ordinary book fluently.
April 25 -	—— Walton:			
	Boys	98	94	The school-room is far too crowded; the schoolmaster also requires assistance. The boys passed a fair examination under the circumstances, but the majority could not read.
	Girls	–	–	
	Infants	–	–	
May 22 -	Prestwich:			
	Boys	4	4	None of the children present could read or write. It was stated that one of them only had been a month in the workhouse.
	Girls	–	–	
	Infants	–	–	
March 31	Rochdale:			
	Boys	–	–	The guardians refused to allow the children to be examined. There is no school in any Rochdale workhouse.
	Girls	–	–	
	Infants	–	–	
May 9 - Oct. 28.	Salford:			
	Boys	83	82	The boys passed an examination very creditable to their master in every respect, but the state of the girls' was far less satisfactory. No girl appeared to understand the Lord's prayer properly.
	Girls	63	24	
	Infants	18	52	
	Todmorden	–	–	No workhouse.
April 22 -	Ulverstone:			
	Boys	37	31	I found the children here going on fairly, but the boys passed a better examination than the girls. It is desirable that the boys should be regularly employed in fieldwork.
	Girls	46	28	
	Infants	–	14	
March 13, Dec. 19.	Warrington:			
	Boys	35	34	The boys were rather deficient in animation, but answered the questions put to them fairly, and were more advanced than the girls, who appeared too much accustomed to collective answering.
	Girls	27	27	
	Infants	18	12	

Date.	Name of School.	In Attendance.	Present.	General Observations.
	LANCASHIRE—*cont.*			
Mar. 18, 19. Nov. 18, 19.	West Derby:			
	Boys	100	95	The children in all the schools passed a good examination, and appeared to be making very satisfactory progress.
	Girls	87	83	
	Infants	80	62	
Jan. 9, June 13.	Wigan:			
	Boys	–	–	The children did not read with sufficient distinctness, and were deficient in spelling. The religious knowledge was tolerable. The new workhouse will soon be completed.
	Girls	42	27	
	Infants	–	15	
Jan. 10	—— Hindley:			
	Boys	55	50	The boys here passed a fair examination, and were decidedly superior to the girls at Wigan. The boys for the most part seemed very young. It is very important that they should not go out to situations prematurely.
	Girls	–	–	
	Infants	–	–	
	CHESHIRE.			
Dec. 24	Altrincham:			
	Boys	33	33	The schoolmaster teaches the elder children, and the schoolmistress the younger. State of the school very fair. The boys are employed in garden-work.
	Girls	32	32	
	Infants	–	–	
	Great Boughton	–	–	No workhouse.
March 28, Oct. 15.	Chester:			
	Boys	32	31	The children were going on well in both schools. The boys, especially, showed much intelligence, and were in an excellent state of discipline. Their religious knowledge was very good.
	Girls	29	28	
	Infants	25	24	
March 27	Congleton:			
	Boys	32	25	The boys passed a fair examination, and were much superior to the girls, who were evidently in a low state. The boys are employed in fieldwork.
	Girls	22	8	
	Infants	3	3	
June 17	Macclesfield:			
	Boys	33	30	The schools were in a fair state. The boys were more advanced than the girls, although they had lost ground by remaining for six weeks, as I was informed, without a master. The boys work in the garden.
	Girls	23	19	
	Infants	18	16	
March 26	Nantwich:			
	Boys	30	29	The state of the boys was creditable to their master, but the girls were inferior to them in liveliness and intelligence, as well as in general information.
	Girls	14	14	
	Infants	13	11	
March 25, Oct. 3.	Northwich:			
	Boys	38	35	The children passed a fair examination, but the girls, as in many other instances, were less advanced than the boys.
	Girls	29	28	
	Infants	–	–	
	Runcorn	–	–	No workhouse.
Feb. 6, Sept. 30.	Stockport:			
	Boys	42	40	The children were in a low state in both schools at my last visit, more especially the girls. Improvement may, however, be anticipated under their present teachers.
	Girls	15	15	
	Infants	23	22	
March 20, June 20.	Wirral:			
	Boys	31	31	The boys here have sustained a great loss by the death of their excellent schoolmaster, who, though extremely ill, was present at the inspection in March. The state of his school was then very good; the girls also passed a fair examination. Another schoolmaster has recently been appointed. The boys are employed in fieldwork.
	Girls	29	28	
	Infants	15	15	

Date.	Name of School.	In Attendance.	Present.	General Observations.
	DERBYSHIRE.			
June 18 -	Ashbourne:			
	Boys - -	10	10	School mixed, teacher a schoolmistress. The children showed a very fair degree of intelligence and information. The boys work on the land under the charge of the porter.
	Girls - -	18	13	
	Infants -	–	5	
Sept. 4 -	Bakewell:			
	Boys - -	25	20	The children passed a fair examination. Some of the girls appeared more advanced than any boys.
	Girls - -	22	19	
	Infants	–	–	
Sept. 3 -	Belper:			
	Boys - -	42	40	The boys, in several instances, appeared intelligent and well-informed, and I found the school in a good state generally; but the girls were far inferior to the boys in every respect.
	Girls - -	24	24	
	Infants - -	23	23	
	Chapel-en-le-Frith	–	–	Not visited; on the day fixed I could not obtain a conveyance from Glossop.
		–	–	
Feb. 5 -	Chesterfield:			
Nov. 26.	Boys - -	22	18	School mixed, teacher a school-master; the boys showed some want of liveliness, but they passed generally a fair examination; the girls were decidedly inferior to them.
	Girls - -	23	12	
	Infants -	–	9	
Feb. 4, 5,	Derby:			
June 19.-	Boys - -	32	31	State of the boys fair; the girls were less advanced. one girl was much superior to the others, and appeared to be in the habit of answering for the whole school.
	Girls - -	15	13	
	Infants -	11	10	
Jan. 15 -	Glossop:			
	Boys - -	7	5	The children in this workhonse are not separated from adult paupers, and were very ignorant; not one could work a sum in simple addition correctly. Nine children from Glossop were at Swinton in September.
	Girls - -	3	3	
	Infants -	10	10	
May 13 -	Hayfield:			
	Boys - -	7	6	The children, who go out to school, were very ignorant; none understood the Lord's prayer, none could work a sum in simple addition correctly.
	Girls - -	6	5	
	Infants -	–	–	
Sept. 2 -	Shardlow:			
	Boys - -	31	31	The religious knowledge and general attainments of the boys were very fair, but the girls appeared very dull, ignorant, and inanimate.
	Girls - -	15	15	
	Infants -	11	10	

RAGGED SCHOOLS.

Sept. 29 -	Bolton:			
	Boys - -	26	27	Premises very fair, but the ventilation was defective in the boys' bed-rooms. Discipline of the school, and demeanor of the children, creditable to the schoolmaster; but the children did not understand well what they read, and their attainments were moderate. Industrial training apparently good.
	Girls - -	11	11	
	Infants -	–	–	

Date.	Name of School.	In Attendance.	Present.	General Observations.
Nov. 10 -	St. Bega's, Hartlepool:			
	Boys - -	82	36	These are Roman Catholic schools; the elder children and infants are in different buildings. The children receive their dinners, but do not sleep on the premises. Their attainments were moderate; a large majority could not read without spelling.
	Girls - -	55	50	
	Infants -	50	31	
Nov. 11 -	Newcastle-upon-Tyne:			
	Boys - -	73	68	The school-rooms and general arrangements are very good; many children sleep in the building. State of the schools fair; industrial training for the boys, sack-making, teasing hair, tailoring; the girls sew, knit, and fix work; some cook, do housework, wash, and iron.
	Girls - -	83	65	
	Infants -	–	–	
Nov. 21 -	Liverpool:			
	Boys - -	75	64	Premises fair; many children sleep in the building. Method of the master moderate, of the schoolmistress fair. State of the schools and attainments of the children tolerable. The boys learn tailoring and clog-making, print bags, and split sarsaparilla; the girls wash, clean rooms, and make their own clothes.
	Girls - -	50	43	
	Infants -	–	–	
Nov. 28 -	Manchester:			
	Boys - -	89	66	Premises fair; several children sleep in the building. State of the schools tolerable, but a majority of those present could not read; the master conducted a class fairly. Discipline tolerable. Industrial training apparently good.
	Girls - -	21	22	
	Infants -	–	–	
Dec. 30 -	Toxteth Park:			
	Boys - -	–	–	A ragged school for girls, apparently well-managed. Premises good; many girls sleep in the building. The school mistress conducted a class well. Religious knowledge of the girls good, arithmetic but moderate, industrial training good.
	Girls - -	10	37	
	Infants -	–	–	

REFORMATORIES.

	Cheshire.			
Oct. 2 -	Bradwall:			
	Boys - -	15	14	Premises tolerable, but there was a want of school-apparatus. There are about six acres of land for industrial training. The boys were very orderly, and appeared to be fairly instructed; one boy was much more advanced than the rest.
Oct. 14 -	Akbar Frigate:			
	Boys - -	52	52	The boys on board this ship are taught to be sailors, and went through their work with great spirit and activity. They appeared to be very well trained. The school-work is duly attended to, and the boys passed a very fair examination.
Oct. 23 -	Toxteth Park:			
	Girls - -	19	19	Premises not good; there is no proper school-room, and a want of school apparatus; rooms generally small and confined. Religious knowledge of the girls moderate, and their intellectual state generally low; they are trained to be household servants.

Date.	Name of School.	In Attendance.	Present.	General Observations.
Nov. 14 -	Castle Howard: Boys - -	14	14	The buildings were not completed at the date of my visit, but the arrangements intended appeared to be very good. There are about thirty-four acres of land for fieldwork. Religious knowledge of the boys moderate; they passed a tolerable examination generally. Books were wanted.
	YORKSHIRE.			
Nov. 27 -	Calder Farm: Boys - -	24	24	Premises fair. The boys are employed in field-work; they were orderly, and answered the questions put to them very fairly. The school-master was not present.

NERAL REPORT, *for the Year* 1856, *by Her Majesty's Inspector of Schools*, JELINGER C. SYMONS, Esq., Barrister-at-Law, *on the* PAROCHIAL UNION SCHOOLS *inspected by him in the* MID-WESTERN DISTRICT, *and in* WALES.

LORDS, Gloucester, March 1857.

I HAVE now to report on the union schools in my district ring the past year.

My duties have comprised also the inspection of the union ools of Devonshire and Cornwall, in consequence of the nporary illness of my colleague, Mr. Ruddock; and also the pection of such reformatories as have been referred to me. e area of my inspection has thus extended from Pembroke Northleach, and from Bangor to Penzance.

1. GENERAL CHARACTER OF WORK DONE.

In my own district I have no marked change to report. ere has been no general relapse from the improvement pre-ously effected; nor, on the other hand, has there been any rceptible progress. A great deal of my attention has been cupied in smoothing the difficulties which have from time time arisen among teachers, and in efforts to give them e notions of their position towards the governor and matron, d to indoctrinate them with views of their duties more rmane to the orders of the Poor Law Board and the rational shes of the guardians. These may be summed up in the sire that the children should learn only that which will be ost useful to them in after life. I am sorry to add that is is the last thing that some masters and mistresses can got to teach. Those who are themselves ignorant, teach thing; those who are the best instructed often teach what ould be fit enough for an elementary boarding-school, but is better adapted to the wants of labor-life in England than smattering of Sanscrit. Others teach well and usefully, but ey are a minority.

2. CIRCULAR TO TEACHERS.

In order to give a clearer view of what is needed, as well to induce the teachers to impart it, I issued a circular ter, in July last, which will be found among the appendices this report (*see Appendix* B.) In many cases the circular s had a good effect; and the announcement of increased ants for industrial training and for teaching power which it ntains has operated to some extent beneficially. The coun-

teracting influences are, in some cases, however, too strong for common sense; and the instruction is so useless or deficient that I have had to recommend the reduction or withholding of grants.

3. New Scale of Grants.—Hindrances to Improvement still left.

The new scale of grants will, I expect, soon work a good change. It gives the Inspector much more power than he formerly had to obtain changes in the kind as well as amount of instruction imparted, for he can recommend the apportionment of salary accordingly. The great difficulty under which we labor in making teachers adapt their instruction to the real wants of pauper children, though it is *increased* by, does not *originate* entirely in, the adjuncts of the workhouse. It takes its rise greatly from the mistaken view of what education should be for the great working class of England. I believe that this is incidental to such education having been grafted somewhat hastily and clumsily upon the only education worth the name previously existing,—namely, for young gentlemen and ladies. There has been, perhaps, too little adaptation of the old modes of teaching, and the old things taught, to the new class of learners, and to the learning now needed. A certain curriculum of studies,—a certain routine of rudiments and accomplishments,—had long held sway: and when, by degrees, it was thought no longer dangerous for Church or State that ploughboys should cipher or that their sisters should learn to write, fragments of the same instruction in all these elements of education were given to them, that had been for centuries the privilege of their betters. There was, however, this great difference, that the little peasants and artisans till lately had only the refuse of teachers, who doled out writing, reading, and arithmetic at so much per head, without the slightest effort to impart knowledge, or even to exercise the lowest order of reasoning faculty. True it is that a juster estimate of the requirements of education properly so called, and of their great diversity according to the class to be educated, is beginning to take place. But this improved notion of what is wanted necessarily takes effect in schools which are most under the ken of the advanced intelligence of the times: and workhouse schools are not of these. The old-fashioned stamp of schoolmaster takes refuge in them as a last resource for the exercise of his effete system and mindless faculties. Although the improved appreciation of a better system, which I mentioned in my last report, p. 132, has not retrograded, such school-teachers still obtain tolerance in the unions where educa-

n is still unpopular; especially if they be themselves on the ge of pauperism, or likely to become chargeable, or if they be ywise connected with a guardian. It is an aggravation of this at evil, that the contentment still existing with the dame ool class of teaching has its last stronghold in the very class m which some of the guardians are chosen. That class not y avow their contentment with a meagre fragment of ele- ntary instruction, which removes the children so taught but e degree from perfect ignorance, but they oppose, though not ays openly, any effort to raise it. When I am told that the perfect instruction I find in many of the schools under my in- ction is good enough for pauper children, I am tempted to ly—"Yes, if you wish them to be paupers all their lives, l to perpetuate pauperism. If, on the contrary, you de- e to make these children independent labourers, and to en pauperism, the way, and the only way, is to teach them ll and thoroughly how, both bodily and mentally, with nd and with head, to succeed in earning their own livelihood."

4. Low State of Common Schools.

I venture to refer to the low state of education in the great k of the common schools for the poor (most of which are not pected at all), because I find the defective instruction in se very schools often held up as a reason why that in the rst workhouse schools in my district is to be deemed satis- tory. I can conscientiously say that I do not know a body children in any union in my district worse instructed, or her so neglected and ignorant, as they were in a Hereford- re union when the chaplain made the following entry in the tor's book, after one of my examinations, at which he had been present:—

> I have examined the school. * * * * Most of them could say collect for the day, and the greatest part of the Catechism; they read spell well for their age. I regret that Mr. Symons, the Government pector, should have made such a report as he did on the 19th inst. *They l as well, if not better than, any children of the same age in any national ol in the county.*"

A low standard of education is thus necessarily productive the ignorance it nurtures; and people who love darkness ner than light will always find countenance in the preva- ce of bad schools for the continued suppression of intellect. e bad effects of workhouse education has been evidenced the increasing difficulty experienced in keeping good chers. Three of the best in my district have given notice resignation within the last few weeks. It is a very inju- us thing at all times to have a change of teachers. It ly unsettles a school, even where the change is from a

good teacher to a better one; for good teachers have always some peculiar pet system of their own, and have little tolerance for that of their predecessor; so that the first lesson given the children on the advent of the new master is to discard and renounce what they had previously been taught to esteem and obey. But the change is generally not to a better teacher, but often to one who will work better with (*i.e.* under) the governor; for, in most instances, the teacher leaves because he disagrees with the governor. In some cases, I am bound to admit that this arises, in great measure, from a want of tact and discretion, and sometimes from insubordination to the proper authority of the governor, who is necessarily at the head of the establishment. But in any case the evil effect is sure to fall upon the school. By dint, however, of strenuous exertions, and the co-operation of the more enlightened guardians, I hope and believe that the workhouse schools in my district will not become worse than they are; and I can, notwithstanding their serious drawbacks, point to some few which are models of what a school ought to be for working-class children. I do, however, think it a sad thing that so much trouble, expense, and skill have to be yearly devoted in maintaining a moderately passable education for 30,000 children against needless adversities and avoidable difficulties, which same trouble, expense and skill would nearly suffice for the much better education of 300,000 children, were those difficulties and adversities removed; as they easily might be, by the shortest possible Act of Parliament, compelling, instead of uselessly permitting, district union schools.

5. Sir Stafford Northcote's Bill.

Sir Stafford Northcote prepared, with elaborate pains, a Bill for enabling magistrates to send poor and neglected children, who are in danger of becoming criminals, or are taken into custody on a charge of begging or vagrancy, to certain industrial certified schools, which have as yet no existence, nor does his Bill provide for establishing them. Now such children are precisely on a par, physical, moral, and mental, with the children now in workhouse schools; nor can I perceive any good reason for the establishment of two distinct sets of schools for children labouring under the same infirmities, requiring the same discipline, bodily and mental, falling naturally and generically under the same public department of Government, and properly chargeable upon the same sources of public revenue and private income. Sir Stafford Northcote seems to be of the same opinion, for not only are guardians empowered

to do a variety of things, such as subsidizing and sending children to those certified schools, but by section 8 they may give the security required of certain parents, provided that such guardians "are the guardians of a union which contributes to the support of a *district union school*, or of a union which supports a school detached from the workhouse, and are willing to stipulate that the child shall be taken into such school respectively." Many of the provisions in this excellent Bill are precisely similar to those in the existing Acts for the education of pauper children both in and out of workhouses, and nothing could be easier than to fuse them in one consolidated Act for the maintenance and education of destitute and vagrant children in DISTRICT LABOR schools. Strange to say, Sir Stafford Northcote's Bill labors under the same defect which neutralizes preceding legislation for pauper children, namely, *it fails to establish the schools to which it provides that they should be sent.* It is precisely this cost of building which besets the threshold, and usually stops all efforts to establish district schools; even though, as the law now stands, all that is requisite is the signature of the majority of a meeting of guardians, duly summoned for the purpose. As a proof how thoroughly hopeless it is to get these schools established, I beg leave to refer to a scheme for the Swansea, Llanelly, Caermarthen, and Llandilo unions,* which I took great pains to mature last year, and where the preliminary expenses were reduced to their minimum. I need only say that, though the advantages and facilities were peculiarly great, and there was on the part, not only of Viscount Emlyn, but, of many of the leading guardians, the strongest desire to establish this school, the scheme is likely to be entirely defeated by the elected guardians. Whether built or rented, and whether with money from rates or from the Consolidated Fund, and whether called industrial or district union schools, it is alike essential that their establishment be compulsory, or no such schools will be established; at any rate, not in number requisite for the object in view. It is, moreover, highly desirable that the schools should be built on a proper scale and in a manner adapted to their avowed purposes. This is not to be secured by leaving them to the chance efforts and abnormal plans of voluntary benevolence; and this applies quite as much to the schools proposed, or rather assumed to be provided by Sir Stafford Northcote's Bill. If this be a condition precedent to any such measure for

* Lord Emlyn circulated a detailed statement, proving that the whole expense of an excellent establishment on a healthy and suitable farm, called Forest (which Earl Cawdor would have leased at 15*l.* rental), would cost only one farthing in the pound.

schooling either pauper or vagrant children, I humbly submit that it is only by some department of the Government that public money can be properly applied to this excellent purpose. This being done, and the schools being provided, entirely apart from the debasing adjuncts alike of gaol and workhouse,—and every provision in Sir Stafford Northcote's Bill appears to me to be capable of very easy application to objects so germane as those of the district schools which my colleagues and I have so frequently and so urgently recommended,—in the first place, they would not only embrace a *similar* class of children, as I have before said, but in a great number of cases *the same children.* For the children of out-door paupers, which the present Acts enable guardians to educate, are frequently precisely those who are described in the preamble and fall within the purview of Sir Stafford Northcote's Bill. The following sections not only harmonise with the view I have thus ventured to take, but, with a very slight modification, they might be made to render district schools of far greater utility than if they were confined to children who are already paupers:—

XVI. When the justices order any child to be sent to a certified industrial school under this Act, they shall, at the same time, by writing under their hands and seals (Form G), order the guardians of the union in which the child was taken into custody to pay out of the common fund of the union a weekly sum not exceeding *three shillings* to the managers or to any person authorized by them from time to time to receive it, until the child attains the age of *fifteen* years, or is lawfully discharged, and also any charges and expenses incurred respecting the child, and also the expenses of conveying the child to school.

XVII. Any justices of the county where such order is made, or where the parent is residing respectively, may, upon the application of the guardians upon whom the order is in force, summon the parent and examine into his circumstances, and in their discretion may order him to pay to the guardians the amount of such weekly payment or such portion thereof as they think fit, and also any instalments which may have been paid by the guardians, and also any charges and expenses incurred respecting the child, and also the expenses of conveying the child to school, and also the costs of such application; and on default of payment for the space of *fourteen* days the like proceedings may be taken for enforcing and recovering the same as are hereinafter provided for the enforcing and recovering of any penalty or forfeiture imposed by this Act.

6. Advantages of District Labor Schools.

In thus blending children whose parents can afford to pay something for their maintenance and schooling with those whose parents cannot, we shall remove from innocent destitution that obloquy of pauperism which will necessarily attach itself to the inmates of any establishment supported solely by poor rates. Thus a great benefit will be done to the destitute children, whilst those who are taken from the streets are raised

from degradation, are rescued from crime, and obtain the means of honest livelihood. The right to send vagrant children to such schools, and to make the parents pay for the child, are quite within the legitimate province of the guardians of the poor. Pauper and criminal children are waifs and strays, to whom the State in some shape or other must be foster-father, and educate them after its own practical fashion, fitting them to do their duty in that state of life in which it has pleased God to place them. It would be an unfair reflection on other schools to say that *they* do not do this, without adding the reason why. It is because they deal with their children only for some six or seven hours daily; we deal with our's for the whole twenty-four. They have to instruct the mind; we have in addition to train bodily and morally. They have only to teach scholars reading; we to rear men.

The district school for South-east Salop at Quatt continues to be perfectly successful. In order to diffuse a knowledge of its organization and great success, I asked for documents to exhibit these, and obtained your Lordships' consent to have them printed for circulation in the form appended hereto. (*See Appendix* C.)

7. Bad System of sending Pauper Children to Common Schools.

If this great distinction be well observed, I think it will appear to demonstration how unwise is the system adopted by the Hay, Pershore, and Tewkesbury unions of sending their workhouse children to receive instruction in the national schools, thus, indeed, avoiding the necessity of having a teacher in the house, but avoiding also the vital and systematic training in out-door and in-door industry, and the moral discipline all day long, which can alone convert a pauper child into an independent labourer.

I have examined the children thus instructed during the past year at Hay, Dudley, Upton,* and Tetbury, with results similar to those of past years. Hay is the best instance; but in all other cases the actual amount of the instruction is little more than nominal. A very few of the quickest children learn something; the rest not enough to pass muster in a dame school. It is the natural effect of their *caste;* aggravated by their frequently irregular attendance and constitutional inapt-

* At Upton I dictated to a boy of 11 years of age, who had been for 18 months the National school, a sentence, which he wrote thus;—"We weear chetchd (heated) at the shop becos we nue noth of rectam," (arithmetic.) This was an average specimen of his education, and he could read and write when he was first sent to this National school!

ness to learn. Small chance have they among the more favoured scholars. It is humanely hoped by some that this intermixture of the pauper and independent classes tends to remove an invidious and unjust distinction. It is my firm belief that it makes it doubly felt. The masters of workhouses where this system is adopted generally (though not universally) speak strongly of its ill effects, and desire it altered. In one case, Tewkesbury, the guardians have refused to alter it; and it results that the pauper children neither receive the instruction nor the inspection designed for them. The last time I examined them they were extremely backward in essential things. At Dudley, when the new workhouse is finished, the system will be altered.

8. Progress in Best Schools.

In some of the best schools in my district, such as those at Cheltenham, South-east Salop district school, Brecon, Holywell, &c., the children are receiving an excellent education. At the Gloucestershire Church Schoolmasters' Association, at the last annual meeting, two classes of the boys from the workhouse school were examined by the master, Mr. Easton, first on physiology and next on Scripture, and they excelled in each. These are rare instances in which the high attainments of the cleverer boys are imparted without injustice to the rest of the school. These Cheltenham workhouse boys are also daily well trained in garden labor and shop work.

9. Industrial Training.

The results of industrial training connected with the schools continue to support all that has been said in their favour. Several unions, however, like Gloucester, which have a number of boys of an age to be at work are still being reared in idleness. I beg leave strongly to recommend that a portion of ground in each garden be left uncropped; and that, when there is no productive labour to be done, the boys be employed in digging, double digging, trenching, ridging, or making borders in this fallow piece. Thus there would always be the means of useful and healthful bodily industry, which is by no means the case now. If a different portion of land were selected each year, the ground itself would be greatly improved by the process. At present there is an increasing addiction to growing potatoes only; a system which prevents habitual industrial training. I have prepared an abstract of the balance sheets of the farming accounts received from the several schools of industry in my district. (*See Appendix* D.)

Schools have lately derived great advantage from the improvement of and addition to books for their use. Amongst the

best for general use, I have found Baker's Circle of Knowledge, Martin Doyle's Village Lesson Book, Domestic Economy (Gleig's series), Wright's Landmarks of English History, and all the Finchley Manuals of Industry. The great difficulty is to get the teachers to teach from their own heads and put knowledge in a shape and expressed in words which children like and understand. Not one teacher out of ten can or will do this. Class-books are not of much avail to them in this. In fact, books are far oftener used by masters and mistresses to save themselves trouble than to teach their scholars.

10. Suggestion of New Requirements.

I cannot help thinking that, if the following system were adopted, the effects would be good, and that we should thereby insure the provision and training of the right class of teachers for the district schools, which must inevitably come to pass ere long. I would respectfully suggest that a circular should be addressed to teachers to this effect :—

"The attention of the Poor Law Board having been called by the Lords of the Committee of Council on Education to the fact that, in many workhouse schools, no sufficient pains are taken to give effect to the latter part of Art. 114 of the Consolidated Order, the Poor Law Board hereby require that effective means be taken to impart such instruction to the children as may fit them for service, and train them in habits of useful industry.

"The Inspectors of both Boards have been specially instructed to further and report upon the manner in which this essential requirement is carried out in each union, and no grants or certificates will hereafter be allowed to any union for instruction which shall be wanting in this respect.

"Grants will continue to be made, where the size and condition of the school warrant them, for industrial training by separate work teachers."

I think that such a requisition would be generally approved, and would mightily strengthen the hands of those guardians who in each board are anxious to give a practical and business-like character to their treatment of young paupers. Nothing short of a system in which labour is paramount will knock on the head the vices of the present practice which perpetuates the pauper breed. True it is, that a thoroughly good industrial system of instruction cannot be carried out effectually in workhouses, but it can be approached; and the more the trial is made the more apparent will become the advantage of district schools. In some unions there is an indisposition towards an industrial system, because it gives trouble. The governors in many unions have devoted much pains to the cultivation of the ground by the boys, and have interested themselves in it in the kindest manner, but there are not wanting others who evince overt repugnance to it, and who doubtless prejudice the boards of guardians against the system.

11. Prize System.

I am anxious to carry out the prize system in workhouse schools as far as I find it feasible, and I have met with much furtherance from the guardians to whom it has been yet mentioned. I take especial care not to make these prizes incentives to that forcing system which consists in cramming the forward children in the first class to the sacrifice of all the rest of the school, but have them fairly distributed among all classes, good conduct telling more than scholarship; if this be not done elsewhere, where the prizes are given, the evil to which I allude is sure to result from it.

12. Dietary.

I rejoice to find that the dietary of young pauper children is now increased in quantity. Augmented strength as well as health will ensue; and proportioned to their increase will be that of the industry and future independence of the child.

13. Mr. Evelyn Denison's Act.

The Acts empowering guardians to send out-door pauper children to school remain, as I said they would, a dead letter in my district. In one instance, at Abergavenny, they have been taken into the workhouse school; they have come there, however, under circumstances which afford no fair experiment. Most of them were far too young, and nearly all dirty, unruly, and ignorant of everything; the result was that the school-mistress, already in charge of boys as well as girls, was over-powered and disheartened; this has since been remedied. I cannot but think it advisable that, where this plan is adopted, there should be always a *male* teacher; for, although the benefit to the out-door children may be very great, the injury to the in-door children may be greater still, unless the former are managed with a strong hand.

14. Pupil-Teachers.

The number of pupil-teachers in my district has not been increased. In the first place, the guardians will rarely prolong the maintenance charged on the rates of any able-bodied boy or girl for the requisite period; in the second place, I do not, after mature consideration, believe that a good teacher, who has *efficiently* fulfilled his onerous and toilsome duties in a workhouse school during the day can be in a fit condition to devote an additional hour and a half taken from his scanty evening relaxation, to the separate education of his pupil. If he does it, and does both his duty to the school and to the

pupil, he is overtaxing his health and strength; but this, in most cases, he will avoid by shirking his undue load of work either in the morning or the evening. Supposing, however, that these evils were avoidable, there still remains a grave doubt how far a workhouse is, even under the best circumstances, a good nursery for a young teacher.

15. Offer of Queen's Scholarships to certain Certificated Teachers.

Your Lordships' kind permission to those teachers who have held efficiency or competency certificates for three years to become Queen's scholars has not yet been acted on in my district.

I am not aware of any other topic which requires mention.

I have the honor to be, &c.

Jelinger C. Symons.

To the Right Honorable
The Lords of the Committee of Council on Education.

APPENDIX B.

Circular from Her Majesty's Inspector, Mr. Jelinger C. Symons, to Teachers of Parochial Union Schools.

Privy Council Office, London, 1856.

I AM happy to be able to inform you that the Lords of the Committee of Council, and the Poor Law Board, have determined, "with a view to promote improvement among the teachers in workhouse schools, and to afford further encouragement to good school-keeping, that the allowance to the teachers in respect of each scholar shall in future be made in accordance with the scale set forth in the following table:"—

CERTIFICATES.		Masters. Minimum Allowance from the Grant.	Masters. Maximum Allowance from the Grant.	Mistresses. Minimum Allowance from the Grant.	Mistresses. Maximum Allowance from the Grant.	Sum to be allowed in respect of each Scholar, in addition to the minimum allowance.
		£	£	£	£	*s.*
Efficiency	1	30	60	24	48	12
	2	30	55	24	44	11
	3	30	50	24	40	10
Competency	1	25	45	20	36	7
	2	25	40	20	32	6
	3	25	35	20	28	5
Probation	1	20	30	16	24	4
	2	20	25	16	20	3
	3	20	20	16	16	—
Permission		15	15	12	12	—

You will observe that by this arrangement, the aggregate amount of the salaries is raised, and also that promotion from one division to a higher one under the same class of certificate, will be attended by an increase of the capitation fee. This will attach a money value to such advancement.

I am to call your attention to the fact, that though promotion from one class of certificate to another (for instance, from probation, 1st division, to competency, 3rd division) can be effected only on re-examination; promotion from one division to another may be made without it. This minor step will henceforth depend entirely on two things; first, on success in school-keeping, and secondly, on industrial training.

I am expressly instructed to have regard to all that is most practical in recommending that teachers should be promoted or reduced from one grade to another, so that such instruction as may specially fit children for service may have its due reward. This cannot be done, unless, in addition to "reading, writing, arithmetic, and the principles of the Christian religion, such *other instruction* be imparted to the children as may fit them for service, and *train* them to habits of usefulness, industry, and virtue."

These are the words in which your duties are described in 114th sec. of the order of the Poor Law Board, and I must scrupulously see to their due performance by teachers, as the necessary condition of any increase of salary.

It may therefore be useful to you that I should repeat the suggestions I have often made to you for effecting the improvements which I think are chiefly required in the workhouse schools in my district.

1. Reading.—Bad reading may be easily corrected by making the child repeat after you, aloud, what he has read badly, and without looking at the book himself; this should be done until he can correctly imitate your own pronunciation, stops, emphasis, and expression.

Spelling is a part of reading, but is best tested by writing from dictation on slates, which might beneficially be practised by a larger number of children than heretofore.

2. Writing.—This should be taught earlier than it usually is, and along with reading. Watch the children while they write, and as soon as they can write large hand with sufficient freedom and accuracy, abandon it for running hand, which is the only practically useful hand in after life. You must, however, continue to watch that all the letters are correctly formed. Good handwriting is defined in the rules of examinations for admission into the public service as "consisting in the clear formation of the letters of the alphabet, the stroke being rapid, neat, and even." A boy who can write a good hand, and who also spells correctly, can almost always find employment. You are not to aim at fine penmanship, but at good plain writing; such as the first Minister of the Crown has thought of sufficient importance to make the subject of the following letter:—

Sir, *Whitehall, 24 May* 1854.

I am directed by Viscount Palmerston to request that you will submit to the Committee of Council on Education, for their consideration, that one great fault in the system of instruction in the schools of the country lies in the want of proper teaching in the art of writing. The great bulk of the lower and middle orders write hands too small and indistinct, and do not form their letters, or they sometimes form them by alternate broad and fine strokes, which make the words difficult to read. The handwriting which was generally practised in the early part and middle of the last century was far better than that now in common use; and Lord Palmerston would suggest that it would be very desirable that the attention of schoolmasters should be directed to this subject, and that their pupils should be taught to imitate broad printing rather than fine copper-plate engraving.

I am, &c.

The Secretary of the Committee of Council on Education. (Signed) H. Waddington.

3. Arithmetic.—As workhouse children are always liable to be taken out suddenly, strive to teach what is most useful first. Postpone teaching simple multiplication and simple division until they can work both *simple and compound addition and subtraction sums.* They will need the power of adding

money very much oftener than that of multiplying or dividing. Do not write down sums for them, let them do it from your dictation, so as to practise them in numeration. They should be also early taught the most useful tables. Above all, practise them in simple mental arithmetic, such as the price of different quantities of the shop goods they are likely to use, rates and amounts of wages, and the like. This tends to create future habits of economy, and to prevent the recurrence of pauperism, which I beg of you to bear in mind, as the great object of your work.

4. Religious Knowledge.—On this all-important subject you will seek the constant advice of the chaplain. Where you are not fortunate enough to have one, remember that the requirement of you is that you should teach "*the principles of the Christian religion,*" both doctrinal and practical; and that this is not satisfied merely by what the children can repeat from memory, or by a knowledge of bits of Scripture history, generally confined to the Old Testament.

I have found that a knowledge how to apply the commandments, the parables, and the practical examples of our Saviour's *life*, though essential, is often very defectively imparted.

5. Industrial Knowledge.—This is highly important; it should comprise all knowledge useful to every day working life. It should bear especially on the trades, occupations, and kind of employment prevalent in the union. Both boys and girls should learn the respective duties of domestic and farm servants in each kind of service, the uses of metals, of different kinds of timber, the qualities, prices, and uses of the chief articles of clothing, the various rates of wages in different employment; the reasons of the variation; the different employments in different parts of the country; emigration, its means and prospects, and the peculiarities of each colony; savings' banks and interest on deposits, simple sanitary rules as to ventilation, drainage, personal cleanliness and temperance; lastly, whatever knowledge will afford to a labouring man the best insight into his own position, dangers, and opportunities. Much of this may be done in the course of the reading lesson of the day.

6. Geography.—Begin with home; make the children thoroughly acquainted the chief features and towns of their own country, and then proceed further; taking especial pains to interest and inform them about the great industrial characteristics of each district, and afterwards of the British colonies and foreign countries.

You will readily see how to make this subject of instruction (geography) help the last (industry).

7. How to Impart Knowledge.—Remember that you have to inform minds, and not merely to charge memories; you must therefore give the children information in the simplest language, using short words, such as they use, and in such a way as to interest them in what you teach. I advise you never to omit close questioning on what you have taught a class, to see if they all understand it. The best method of doing this is to make each child silently hold his hand out who thinks he can answer; then point to the youngest or least likely to be right, to answer you. If the others think the answer right, teach them to drop their hands: if not, to keep them up; in which case, take their answers successively till the question is well and fully answered. This has been found to be the quietest and most effectual way of testing a whole class: and of avoiding the delusion caused by a number of children echoing a correct answer, which is really given by one or two only of the most forward scholars. I strongly recommend you to adopt this plan systematically. Do not attempt any high flights: but aim at grounding the great body of the children in homely practical knowledge and acquirements, thus diffusing instruction generally among all. Take great pains to give each class a fair share of your own personal attention. I judge

of the teacher greatly by the justice done to the lower classes, and I object strongly to their being instructed chiefly by other children.

8. Moral Training.—This should pervade the whole of your work. Recollect that this may be the only opportunity these poor children may have of acquiring habits of truthfulness, cleanliness, modesty, obedience, diligence, and industry. Every hour in the day will give you occasions of inculcating these virtues, both by practice, precept, and your own example. Pray do not incur the heavy responsibility of neglecting this.

Watch the children during their play, and make them observe common things when they walk out with you, which they should do more frequently. These are capital opportunities for moral training.

Let no punishment be given whilst in anger; let two hours always elapse, as the law requires, before corporal punishment is administered to boys; and resort to it only as a last resource, and in the master's presence. I need not dwell on the vast power which gentleness will give you over the hearts and temper of the children, and how warmly they will respond to kindness, in their present hapless condition.

Avail yourself of all means the guardians may be good enough to give you, of affording rewards for good conduct. I shall be always willing to co-operate with you in obtaining them. Encourage the children in innocent tastes, in healthful exercise and recreation.

9. Labour.—The kind of training given will depend on the guardians. It will be my duty to see that it is properly taught; and that the children are not only made to work, but are instructed in the best mode of working and in the reasons for what they do, and the principle on which it is done. You should, whenever you are charged with this branch of instruction, be, and work, as much as possible with the children; whether the work be gardening or carpentering for boys, or needlework or household work for girls.

In this, *and in all the instruction you give,* think and teach what will be most practically useful to the children in their probable course of life.

I hope you will employ some of your leisure time in your own improvement; so as to obtain higher certificates on re-examination, remembering that a full head is essential to effective teaching.

Write to me whenever you think my advice may be useful to you.

I am, &c.

(Signed) J. C. Symons,

Her Majesty's Inspector of Union Schools.

Appendix C.

District Labor Schools.*

Council Office, Downing Street, London,
18 October 1856.

Sir,

Many inquiries have been lately addressed to me respecting the necessary expenses of establishing and maintaining Labour Schools, both for the purpose of District Union Schools and Reformatories.

As I have found that the cost of such establishments is much over-estimated, whilst their efficacy has been under-valued, I addressed a request to Mr. Wolryche Whitmore, that he would be good enough to furnish me with the actual expenditure and results of the Quatt Farm School, for the guidance and information of those who may be desirous of establishing like institutions, and he has kindly furnished me with the enclosed information.

I can vouch for the entire success of the establishment at Quatt, after inspecting it for a period of nine years.

It has occurred to me that it would be very useful if these documents were printed for distribution.

I may add that the costliness of such institutions adds nothing to their utility. So long as the essential requirements for the health of the inmates are observed, the rougher and homelier they are the better. The expenses at Quatt might be very much reduced wherever suitable buildings exist which could be rented for the purpose; and in most unions the extra expense thus entailed by a district school on each ratepayer would be insensibly small.

I have, &c.
(Signed) J. C. Symons,
H.M. Inspector of Schools.

To the Secretary of the
Committee of Council on Education.

Dear Sir,

Quatt, 8 *October* 1856.

I requested Mr. Garland† to furnish me with the particulars of his school, to enable me to reply to your letter. The account he has drawn up appears to me so full and satisfactory, that I think I cannot do better than forward it to you. Any further information you may require shall be furnished.

I am, &c.
(Signed) W. W. Whitmore.

To J. C. Symons, Esq.

Mr. Garland's Statement.

School when first established.	In 1836, at Bridgnorth Union School.
Numbers in school then.	From 36 to 40, including both sexes.
When first industrial.	In 1837 it was suggested to cultivate the orchard or a little more than one quarter acre by the boys. Our first attempt was to grow potatoes for the use of the school, in which we succeeded very well. The next step was to give each boy a plot of ground to cultivate for himself. They all chose to grow vetches or tares; these were cut green for the pigs (we kept only two), and some were harvested; but we made only a poor hand of this business, and gave up the attempt for a year or two, except that we continued the growth of potatoes.
When land was added.	In the autumn of 1845, when the number of boys had considerably increased, it was thought advisable to give

* This document has been separately printed for distribution. † The Superintendent.

additional employment; with this view, four acres of land were taken and cultivated by them, the crops being applied as food for cows and pigs (the former of these we had not till then begun to keep), and of the latter we increased our stock, adding two or three breeding sows and several stores; this, as an experiment, turned out so satisfactory, that the subject received the attention of surrounding unions, until, in 1851, it became a district school, comprising the four unions of Bridgnorth, Cleobury Mortimer, Madeley, and Seisdon; in which there are 70 parishes, 190,110 acres, and 65,705 persons.

Formed into a district school.
As district school.

Average number of children.

The number, including both sexes, have never exceeded 144; and are seldom below 120; therefore the present number (133) may be taken as the average.

Present quantity of land.

When the district was formed, in 1851, more land was taken, and we now have ten acres arable, and two and a half acres of grass, which are held on lease for 99 years.

Payments on land.

The annual payments on the land and premises are as follows, viz.:—

	£	s.	d.
Rent - - - -	51	16	3
Rentcharge - - -	3	5	8
Insurance - - -	2	8	8
Rates - - - -	4	6	8
	61	17	1

What stock is kept.

We keep from four to five cows, and from ten to twenty pigs. We have at the present time five cows and twenty four pigs; of these last there are three breeding sows, five strong stores, and sixteen young stores of two months old; and one horse.

Average *net* return per acre.

The average *net return* is 10*l.* per acre, but this will vary according to circumstances.

Receipts and expenditure for the farm account for the year ending Sept. 1856.

Receipts for the year ending September	£	s.	d.
1856 - - - - -	270	17	11
Expenditure for do. do. - -	117	9	5
Balance paid to treasuser -	153	8	6
	£270	17	11

Time a child usually remains in school.

From three to four years.

Ages of those now in school.

As before stated, we have now 133 in school (80 boys and 53 girls); of these, the eldest is 15, the youngest 4 years old. Their ages are as follows: 4 of 15, 4 of 14, 5 of 13, 18 of 12, 15 of 11, 22 of 10, 29 of 9, 16 of 8, 13 of 7, 2 of 6, 6 of 5, and 1 of 4. The classification of these are, 38 orphans, 18 deserted, 55 other children, such as children of widows or taken as a relief to parents, and 22 illegitimate. Of those of 15, one is a boy who has lost a hand, one a girl of weak intellect, and one afflicted with scrofula; the remaining one is fit for service.

State of health.

Of course there must be times when sickness finds its way into all dwellings, small and great, rich and poor, and this institution, in common with others, has come in for a share. We have had measles, hooping-cough, and all the diseases to which the young are especially liable; but, taken as a whole, the health of the children here has been remarkably good.

Deaths since 1851.

In 1852, no death; in 1853, three deaths; in 1854, five deaths; in 1855, five deaths; in 1856, no death. The average for five years, $2\frac{2}{5}$. Of those who died in 1853, two were from consumption, which they laboured under when admitted, and one from acute disease of the brain.

Those in 1854, four from consumption induced from scrofula inherited from parents, and one from mesenteric disease.

Those in 1855, three from fever, one consumption, and one from scrofulous sores and dysentery. During the last year we have had scarcely any sickness; and at the present moment we have not a single case of illness in the establishment.

Fitness for business after leaving school.

The education here given, both mental and industrial, combine to fit the children of both sexes for an active and useful life. As an instance of ability to work, I may mention that at the Bridgnorth Agricultural Society's digging match for 1854, four boys were entered as competitors, when they carried off all the four prizes, though pitted against much stronger boys than themselves. Again, in 1855, they carried off three out of the four prizes, and on the 9th of this month it is intended that eight boys shall compete for the society's prizes.

That they are also well taught in school may be proved by the "Inspector's Reports" and "Visitors' Book."

They go into various services.

They (the children) go, upon leaving school, some into domestic service, some to farms, some to trades, and some to other offices, and one or two as clerks.

One boy (a cripple) who has had his attention directed to the means of getting his living as a clerk, is about to enter a solicitor's office, where I have not the smallest doubt of his acquitting himself in a respectable manner.

How they turn out in after-life.

At the "Confirmation" held on September 4th, 1856, by the Lord Bishop of Hereford, at Saint Mary's Church, Bridgnorth, where I attended with six children then under my care, I had the satisfaction of seeing four of my old pupils present themselves as candidates; and I take this as evidence that they had not let slip the "good seed."

The girls also deserve my best opinion, as I can point to several in the neighbourhood as respectable domestic and farm servants. One who left lately is giving such satisfaction that her master told me that though he agreed for 2*l.* only per annum, he would rather give her 8*l.* than lose her.

One lately paid me a visit, walking fifteen miles to see me. She left the school about seven years ago, and is now living at Chaddesley Corbett, Worcestershire. As an instance of confidence, I may mention one of a young woman who came all the way from London to see us, and after her return she sent her bank book and 4*l.* of her earnings to be placed in the savings bank, with other she had already deposited there. I have still the bank book, and can produce it. I am often recognized by young men and women who were once children under my care, but who have grown up quite out of my recollection. It seems an immense pleasure to them to speak again to those who have so often and so affectionately spoken to them in years gone by. Two cases of this kind occurred in Bridgnorth on October 4th, 1856; one a waggoner, the other a worker of a threshing machine. I learned from the latter some account of his two brothers who had been in the school with him, and who are now respectable men, the one living in Northampton, the other at Bilston; the former a chartermaster, and the latter a collier; and I expect shall soon get a visit from them. I may close this part of my statement by saying there is but one feeling on the part of those who have passed through the school, and that is one of respect and affection, not only for the teachers, but for

the manager and clergyman, and a strong attachment to the place itself. I think it will be conceded that if the children (in the main) turn out respectable work-people and servants, the school will have effected all that was hoped or expected from it. I will not, however, assert that all have turned out so well as we could wish, for that could scarcely be expected; but I do say that the cases of the reverse are very rare, and that I have only known two cases in twenty years of men appearing before magistrates for any offence; the one was a person of weak intellect, and the other was committed for three months for some petty theft. He afterwards enlisted in the army during the late war; he wrote to me from the Crimea, and I am in hope he may yet become an honest man.

As regards the girls, I have known of five only in the same period who have disgraced themselves; of these, two are married to the fathers of their children, one is in the union workhouse, and two are in farm service.

Letters from former pupils.

I send twelve letters received from former pupils, which I have no objection should be used. I have a great many others, but these are enough to show their feeling.*

---

* Here are two of these letters:—

DEAR SIR, *B——— Works, Birmingham, 15 November.*

I DULY received yours of the 14th, and beg to say the newspapers I send you cost me nothing, neither the map, which was given me by Mr. Partridge. "The Times" were given to me by a man in the manufactory, who has them sent him now and then by a friend in the town.

I have sent you per post an extraordinary edition of the "Birmingham Journal," which was out to-day and contains all the news from the East.

I am glad to hear the Inspector has been, as I have no doubt it is a great weight off your mind. I hope the children acquitted themselves to his satisfaction.

I beg you will not send any postage stamps, as what I have sent you is nothing compared to what I owe you for your kindness to me when in the school. To you it is, after God, that I owe all my thanks for my prosperity in life. What should I have done had I not been sent to the school? I should in all probability have been strolling about the streets. Many were the times I used to think I was hard done by, but now I find out every day more and more it was all for my own good, and nothing compared to the difficulties of life.

Give my love to Mrs. G., Mr. R., Miss G., and all your family, and accept the same yourself. Hoping you are all well,

I remain, &c.

Mr. H. Garland. R. W.

Leith, H.M.S. "Edinburgh,"

KIND AND EVER-HONOURED FRIEND, *24 December* 1855.

WITH pleasure I now take up my pen to answer your kind and welcome letter which I received on the 23d of this month. How happy I am to think that I have such a friend to write to! I hope the time will not be long before we shall have the pleasure of spending a few hours together. Kind friend, the questions which you asked me touched me to the heart, indeed it touched me so that I cannot find words to express myself. As regarding the war, I cannot tell you much about it, all that I can tell you is that it is all over in the Baltic till next spring, and then no doubt it will be sharper work than what it is at Sebastopol: to tell you the truth war is an awful thing, I can assure you. A great many will see their friends this winter that will never see them again; oh, what a thing! I can assure you I thought it sharp work at Bomarsund, when the shot and shell and pieces of iron which they fired at us. I have a grape shot in my possession which knocked my dinner over as I was sitting down to eat it. I can assure you I thought that was sharp work; I thought that was plenty near enough. It is my belief, and a great many more, that the Russian bear will not give in until his country is taken from him. I should like to hear of the taking of Sebastopol; the sooner the better. I thank you for the instructions which you gave me in your last letter. I cannot help thanking Heaven for placing me in such a position for receiving such education, when my comrades say to me every time I begin to write, how well I write; but for all that I wish I could write better; I should never be above learning. I shall always be thankful to any kind friend for giving me any information. So I must conclude for the present, and

I remain, &c.

Mr. H. Garland. J. N.

ABSTRACT of SCHOOL FARM ACCOUNT for Year ended September 1856.

RECEIPTS.	£	s.	d.
From 375 lbs. butter sold in market	20	14	5
„ potatoes sold in market	1	12	0
„ walnuts sold in market	3	0	0
„ cabbage sold in market	15	0	0
„ "stock" sold (as pigs, calves, &c.)	61	18	3
„ repayment property tax	2	5	2
„ horse labour	4	10	0
„ produce of farm consumed in the school	161	18	1
Total	£270	17	11

EXPENDITURE.	£	s.	d.
For labourers' wages	9	15	8
„ one year's rent	33	16	2
„ rentcharge, rates, and taxes	10	3	6
„ hay, straw, sharps, grains, bran, &c.	27	14	2
„ manure (soot and lime) and drawing same	3	15	0
„ seeds, 5*l.* 8*s.* 4*d.*, tools, 1*l.* 14*s.* 6*d.*, repairs, 14*s.* 6*d.*	7	17	4
„ cow doctors, 19*s.*, basket, 2*s.*, dairy utensils, 8*s.* 8*d.*	1	9	8
„ cow and calf	15	10	0
„ bills:—bricklayer	2	17	0
„ wheelwright	0	8	6
„ blacksmith	1	4	4
„ sundries	2	18	1
Total expenditure	117	9	5
Balance paid to Treasurer	153	8	6
Total	£270	17	11

THE AGGREGATE WEEKLY EXPENDITURE is as follows:—

7 October 1856.

	Per head per week. s.	d.
Food, firing, soap, candles, soda, starch	2	8½
Clothing	0	5¼
Repayment of loan	0	5¾
Establishment charges*	1	4½
	5	0

The cost of carriage of children to and from the school I am unable to state, as I never heard any one say, but this I know, that each union bears its own expense in that respect, I should think it would not exceed 1*s.* per head of those sent by conveyance.

The quantity of coal consumed here during the past year was 104 tons, at 11*s.* per ton, 57*l.* 4*s.*, and this I think we may take as an average.

The dietary I enclose; it is thought to be a liberal one; but whether this, or one less generous would be adopted, would, of course, rest with the Board of the proposed district.

I remain, &c.

J. C. Symons, Esq. (Signed) H. GARLAND.

* Receipts from Her Majesty's Treasury and profit from farm, deducted.

Sick to be dieted as recommended by the medical officer.

Approved by the Poor Law Board. (Signed) W. W. Whitmore, Chairman.

Sir, *Cleobury Mortimer, Bewdley, 6 October* 1856.

I beg to inform you the total amount borrowed by the Managers for the alteration and enlargement of the premises for the schools and offices was 2,000*l.*; of this sum 482*l.* 10*s.* has been repaid, with interest at four per cent., amounting to the further sum of 348*l.* 16*s.* The principal remaining unpaid is 1,517*l.* 10*s.*

I am, &c.

W. W. Whitmore, Esq. (Signed) W. Cooke, Clerk.

*** Deeming the above information in some respects deficient, I begged for more, and received the following:—

My Dear Sir, *District School, Quatt, 14 October* 1856.

Mr. Whitmore handed me yesterday your letter of the 10th instant, and desired me to reply to it.

I beg to say that the following is the routine of the day's work. At 5 A.M. four of the elder boys rise to attend upon and feed the cows and horse; at 5½ a bell is rung as a signal for all the others to rise; they are expected to be downstairs by six, when all, except the very little ones, after washing, proceed to their respective work, some cleaning knives and forks, which is rather a long job, there being from ten to twelve dozen to do, others cleaning shoes and boots, some to pumping (this requires twelve boys), one or two supplying coal to the several offices of the establishment; one or two others cleaning up the yards and premises; two or three others washing the little ones; two others weighing potatoes for the coming dinner; and three or four others feeding and cleaning out the pigs; and the remainder, who may have no stated work assigned them, go as soon as they are washed to such work on the land as we have under hand. The others who have stated work, go as soon as they have finished their job, to join those in the field, (this is supposing the weather to be fine, but if it be wet they do nothing out of doors before breakfast). Thus they work from 6½ till ¼ to 8, when the bell rings to leave work; at 8 the bell rings for breakfast, the quarter of an hour being allowed for washing hands, &c. &c. &c. At 8½ breakfast is over, when half an hour is allowed for play. At 9 they enter school, where they remain till twelve, when some of the elder boys again attend upon the cows, &c.; some are allowed to play, and others are occupied with some trifling employment till 1 o'clock, when they dine; this meal occupies half an hour; after it they play till 2, at which time all who are able go to the field work, and those who are too young go into school, where they remain till 4 o'clock; those in the field continue to work till 5, and if work is pressing a little longer. At 6 they take their last meal for the day, and from 6½ till 7 they are allowed to employ themselves as they please; from 7 till 8 is occupied in singing, or some one of the boys reading aloud to the rest, or else some lessons by the teachers; and at 8, after prayers, they retire to bed, except one or two boys whose duty it is to assist to sup up the cows; these stay up till 9 o'clock.

The girls also, like the boys, rise at 6 A.M. and spread themselves about the house to their allotted tasks; some lighting fires, some cleaning and scouring tables, floors, and the candlesticks, knives and forks; others making beds, sweeping out and dusting rooms, some preparing for the general breakfast, others washing little ones, some to milking, and the numerous other employments which present themselves in an establishment of this kind, till 8 o'clock, when they go to breakfast. At 9 they go into school, except a draft of the elder ones, who alternately stay out to assist in the work of the kitchen, dairy, and bakehouse, under the direction of the matron, assisted by the servants, who are all hired women.*

---

* The work-mistress receives a grant.—J.S.

The whole of Monday is devoted to washing, when all lend a helping hand. All are employed in school in the afternoon in needlework and knitting (except the very little ones, who receive some elementary lessons) till 5. They sup at 6, play from 6½ till 7, from 7 till 8 mending stockings, &c., during which, one of the elder girls or the school mistress reads some instructive and interesting tale, or try some tune or chant. At 8 they go to bed, unless there be something pressing for two or three of the elder ones, who in that case would stay up till 9. I ought to add that they are taught to iron and mangle, and in short to do all that would fit them for service, but they are never employed in any way in garden or field work.

With regard to the cropping and cultivation of the land, I can only repeat what I have so often before stated, viz., that the bulk of the ground is cultivated by spade labour, with a view to a supply of food for the cows and pigs. About 1½ acres are employed for the growth of potatoes for the use of the school, and charged at market prices as if bought of a stranger; ¾ acre cropped with cabbage for sale, which generally turns out a profitable speculation (I have sold this year from ¾ acre as many as realized 15*l.* 5*s.*), the rest of the crops being devoted to the use of the cattle. I will just run through the cropping for this year, as follows; viz.:—

¾ acre early cabbage, followed by swedes (a fair crop).
¾ acre of clover, which I cut three times.
¾ acre of barley, produced thirty-three bushels, imperial.
2¼ acres wurzels, which promise a heavy crop.
¼ acre red Alteringham carrots, not a large crop.
1½ acre of potatoes, *very much* diseased.
½ acre winter vetches, followed by swedes (fair).
¼ acre of spring do., followed by common turnips (fair).
1¼ acre Italian rye grass, cut four times.*

It will thus appear that we have only nine acres under cultivation, the rest being occupied by house, yards, and alleys.

In making my calculations of the profits, I divided the receipts by 12½, the total of the land paid for, viz., 10 arable, 2½ grass, whereas in truth we cultivate but 9 acres, and 2½ grass makes the division only 11½, thus giving a greater net profit per acre than I have shown.

I hope, Sir, this may be sufficiently full for your purpose, but if not, and I can in any way be more explicit, I shall be glad to give any further information in my power.

I remain, &c.

J. C. Symons, Esq. (Signed) H. Garland.

* These cuttings result from the large supply of liquid manure kept in tanks, and frequently applied to the growing crops.—J.S.

N.B.—Whitchurch and Winchcombe are omitted, as there the ground is really worked by men; two boys only are returned in each case as being employed upon it.

SPECIAL REPORT *on* REFORMATORIES *in* GLOUCESTERSHIRE, SHROPSHIRE, WORCESTERSHIRE, HEREFORDSHIRE, *and* MONMOUTHSHIRE, *and in* WALES, *by* JELINGER C. SYMONS, Esq., B.A., Barrister-at-Law, &c., *one of Her Majesty's Inspectors of Parochial Union and Reformatory Schools.*

MY LORDS, February 1857.

ALTHOUGH the Reformatories and Ragged Schools (falling under the Minute of 2 June 1856) in my district were only recently referred to me by your Lordships for inspection, I had previously visited several, and taken part in most of the proceedings by which public attention has been directed to the reformatory movement.

§ 1.—HISTORY OF PUBLIC EFFORTS TO IMPROVE TREATMENT OF JUVENILE OFFENDERS.

The entire failure of imprisonment to effect reformation was an admitted fact long before any general effort was made to supply another mode of dealing with juvenile offences against the law. The Philanthropic institution and the enterprizes of Captain Brenton at Highgate and of the Warwickshire magistrates at Stretton on Dunsmore were for many years the only experiments which systematically essayed the treatment of young criminals by means distinct from penal discipline. When public attention was a few years ago thoroughly attracted to the subject, meetings, conferences and discussions ensued ; but, as usually happens, general principles formed the staple of speeches, pamphlets and denunciations. Tedious details of admitted evils occupied time and diverted attention, which would have been more profitably applied to the consideration of the best practical means of perfecting a better system. It was far too readily assumed that to rescue the juvenile offender from the gaol, and to encircle him with the appliances of personal kindness in private asylums was sufficient for his reformation ; and that thus to supersede penal jurisprudence was to fulfil the requirements of society for the prevention of crime. The captivating facility of enlarging on experienced evils and the prospective fruits of benevolence, thrust the actual difficulties of the new enterprize out of sight ; and encouraged some excellent people to embark in the work with a very inadequate notion of the essential conditions of success. This resulted in shortcomings and disappointments, which a juster appreciation of the nature of the work, and more attention to the details of its organization, might easily have

prevented. The peril of these premature attempts was soon increased by their number, and the consequent impossibility of obtaining a due supply of masters and managers possessed of the peculiar qualifications requisite for their difficult office. In some few cases this want was met by the singular devotion and exceptional aptness of the promoters of the new reformatories, who threw their earnest energies and warm hearts personally into the work, and became themselves the teachers and trainers of the little outcasts they collected in their schools; enlightening them by their own high attainments, and reclaiming them by sympathy and enthusiasm. In such cases the effects were prompt and perfectly successful; but they were necessarily rare; and are already diminished. It is in the nature of things that examples of men and women leaving the higher spheres of society for the daily and hourly tendance of depraved children should be isolated, even in the full fervour of a new fashion; and it is inevitable that they should wane with the romantic colours in which the prospective work was pictured. It was soon found that the actual work of reformation is toilsome, disheartened by many failures, and rewarded by the *immediate* fruits of few successes.* The actual management therefore of reformatories already mainly devolves on paid agents; and this necessary fact ought to check the precipitate establishment of many more reformatories until there has been time to train fit persons for the very difficult task of managing them effectually. There is reason to believe that this discreet caution has prevented the multiplication of these institutions to the extent which was at one time imminently probable. The existing reformatories may be looked upon simply as experiments, and nowise dealing with the whole of that section of children who have committed crimes punishable by law; whilst they scarcely touch that far larger group who belong to the vagabond class; and, however slight the moral distinction between them, are demarcated by the broad line drawn by the fact of conviction.

§ 2.—Old System of the Gaol still obtains.

Before describing what reformatories are and what they should be, and how established, organized and officered, I beg leave to present a few facts in support of this preliminary statement, viz., that the evils of the old system, with all its anomalies and mischiefs, remain nearly unabated, whilst crime of all kinds is rapidly increasing.

* A remarkably candid and graphic detail of his experiences written by Mr. Bengough, in the "Irish Quarterly Review" of September 1856, fully bears out this statement.—(See Appendix A.)

I am indebted to the courtesy of Mr. Barwick Baker for the inspection of a number of returns which he has lately collected from nearly all the police districts in the county of Gloucester, containing accounts of the age, crimes, convictions, and sentences of all the boys committed in that county since 1851. I have selected the four most important districts, and having gone through the returns as carefully as I could, and having been favoured with the population and parishes of each of these police districts by Captain Lefroy, the chief constable of the county, I have abstracted the results, as follow :—

§ 3.—Tabular Abstract of Committals of Youths from 1 January 1852 to 31 December 1856.*

	Bristol.	Cheltenham.	Gloucester.	Stroud.
Population	44 407	49,056	33,629	43 001
Convictions—First	33	165	14	132
Second	3	45	0	7
Third	0	17	0	0
Fourth, &c.	0	5†	0	0
Sentences‡—Fined or whipped	5	24§	0	35
Imprisoned less than eight days	3	5	2	1
Eight days to one month	13	81	11	48
Above one month to three months	9	84	1	35
Above three months	0	2‖	0	0
Long terms and sent to Reformatories	6	40	8	11
Ages—Under eight	1	1	0	1
Eight to ten	0	10	0	0
Ten to twelve	4	51	0	19
Twelve to fourteen	5	75	6	59
Above fourteen	26	100	8	60

One feature of this table is the immense disparity of the committals proportioned to population in each of these districts. It sets all attempt to treat committals as indices of crime at defiance, and is a proof of how little avail are the bare statistics of the subject. There is, probably, far more criminality in the Bristol district,—which, though chiefly comprising country parishes, also includes that of St. George's, which has in it one of the lowest sections of the city,—than the Stroud district; but, in the former, the means of escape and concealment are far greater, and in the latter there exists a vigilant association for the prosecution of felons. At Cheltenham, the difficulty of finding industrial occupation for boys is a frequent source of crime.

* The totals do not correspond, as some of the figures refer to children more than once convicted, and others do not.

† One 5 times and one 6 times.

‡ Twenty-eight cases from Cheltenham district and five from the Stroud district, which were sent for trial at Sessions, are not included in the sentences, no return having been made of them.

§ All fined, none whipped.

‖ One 4 years' penal servitude.

There are, moreover, a very depraved idle class at Cheltenham. The returns afford no better indication of facts, as regards age; there being no reason for supposing that juvenile crime, beginning at eight or nine years of age in Cheltenham, never occurs till after twelve at Gloucester. At Bristol and Gloucester, however, there are separate quarter sessions; and the denser parts of the population, where receivers of stolen goods live, are not comprised in these returns. This, in some degree, accounts for the apparently lesser amount of crime in those districts. Of the quasi-criminal youths we have no record; for each superintendent, with scarcely an exception, reports to Mr. Barwick Baker, that he is not aware of any other children than those actually convicted who are criminally disposed! Of the 344 boys recorded in this table only 65 appear to have found admission into reformatories. The great bulk, therefore, of those who are brought to justice are to be reformed, as far as the law concerns itself, solely by a few weeks' imprisonment. It might be that a good school in the gaol, and the ministry of a zealous chaplain, would in time do some good to the young prisoner, but the possibility of any such means of reformation or improvement is effectually prevented by the shortness of the sentences, of which it appears that above two-thirds are less than a month.

It will be useful to relate two or three actual cases which have occurred in one of the petty sessional divisions of Gloucestershire.

§ 4.—Particulars of Actual Cases.

W. B., then ten years old, was convicted, on the 25th of July 1855, of wilful damage,* and fined; on the 27th of August next, of stealing wheat, for which felony he was again only *fined*;† on the 20th of October next, he was again fined for wilful damage; on the 26th of the next December, being now eleven years old, he is convicted of another larceny,‡ and is for the first time imprisoned for ten days; this being his fourth conviction in five months! On the 15th of March 1856 he is convicted of "vagrancy;" and the experiment is now tried of giving him *four days more imprisonment than last time*, when he had committed a larceny; his fourteen days of gaol, however, wrought only a short reformation, for on the 14th of May he is again convicted of "an attempt to commit a felony," with another boy, and for this sixth offence,§ in

* Throwing a stone which killed a turkey.
† Gathering some ears of wheat from a sheaf, which were valued at sixpence.
‡ A few (three or four) hooks from a poulterer's.
§ Lurking about a shop (or rather in it) during the owner's absence.

less than ten months, he is now imprisoned for six weeks. On the 23rd of August he was again convicted of another offence and sentenced to fourteen days, and then sent to Hardwicke Reformatory for five years.

Here is another case:—J. U., being then twelve years old, first figures on the 4th of May 1852, when he is convicted of larceny, and is sent to gaol at Northleach for twenty-one days; on the 18th of June next, he is convicted of a second larceny, and is sent for two months more to the same gaol; on the 9th of December next, he is again convicted of larceny, number three, and has then an extra month (viz., three) in Northleach gaol. On the 21st of April in the following year* he commits a fourth larceny, for which he is sent back for six weeks to Northleach. He seems, however, to have been now more successful in escaping detection; for his next conviction, for an intent to commit a felony, does not take place till the 26th of March 1855, when he is at length sent, after three months' imprisonment, to the Hardwicke Reformatory. He goes there at fifteen, and is reported as having "high instruction;" and as being with another also sent there, a "regular thief trainer at ———." He had become frightened at the apprehension of his comrade, and stole nothing for nine months. He is still under training at Hardwicke, and though his conduct was for some time "unsatisfactory," I gather that there are now good hopes of his permanent reclamation. He is learning the craft of a mason, which he intends to follow. If reclaimed, he will owe it solely to his good luck in being sent to Hardwicke.

§ 5.—Comments on Repeated Imprisonments and Unequal Sentences.

It is obvious that an unchecked career of previous crime in boys of vicious character, with natural wits, sharpened by what is termed "high instruction," and hardened by repeated small doses of gaol, must of necessity perfect such cases of stubborn viciousness as will sorely try the efficacy of any reformatory agency. The mischief is done far less by the original lapse into crime than by the feebleness of the penal remedies which have nurtured it. "I have (says Mr. Barwick Baker) long been strongly impressed with the idea that, whether we consider the reformation of the prisoners or the safety of the public, there is nothing I should more anxiously avoid than a repetition of short imprisonments."

---

* Previous to passing of the Act.

J. C., also of the same place as J. U., at fifteen years of age, having been twice convicted previously of small larcenies, is, for his third offence, sentenced at quarter sessions*—not to a Reformatory—but at once to four years' penal servitude!

It is right to state that Lord Palmerston's Act was passed on the 10th of August 1854, and that the Hardwicke school came into operation at the beginning of 1852; but the magistrates had no power of sending boys there as a part of their sentence. It was merely done as an act of private charity; the Government (when a conditional pardon was granted, for removal to a school) did not furnish the means of subsistence beyond the remainder of the period for which the boy was originally sentenced to prison; beyond that period there was no power of detention. This remark applies from January 1852 to August 1854.

It used to be a common practice at Cheltenham for a troop of boys to go out together to receive an offender in triumph on his return from Northleach, so little is imprisonment regarded as a disgrace by the vagabond class.

A case is reported in the *Morning Post*, of the 28th of February 1857, of a lad named Farrington, who had been five times summarily convicted, thrice whipped, once sentenced to four months for felony, and has at last been sentenced to three months and whipping at the Wandsworth House of Correction.

The whole system of penal jurisprudence is, in fact, little better than a lottery. The worst offenders often escape for years. The amount of convictions bears no proportion to the crimes committed, and the sentences still less to the criminality of the offender. The first offence is, of necessity, punished with far more severity than the second and third, for the gaol experience gained in the first imprisonment, takes away the sting from those which succeed it. Nothing can well exceed the uncertainty of sentences which results from the widely different discretion exercised by each judge or chairman. One will give nine months' imprisonment for the same crime which another punishes by four years penal servitude.

§ 6.—Legislation for Cases of Criminal and Quasi-Criminal Children.

Beginning *ab imo*, there are few more important labours for philanthropy, both public and private, than the reformation of the seed-class of future crime.

It may be divided into two grand sections, which, I venture

* Twice out of the three times he was dealt with at the quarter sessions necessarily.

to submit, ought never to be blended in theory, or fused in practical treatment:—

CLASS A.—Those who have been convicted of crimes.
CLASS B.—Those who, not having been convicted, are vagrant, not properly cared for by parent or guardian, or otherwise liable to become criminal.

It is needful to define this distinction. There are a class of offences which the law regards as crimes, and which are of a deeper dye than mere vagrancy or other petty offences; thus, in legal terminology, the distinction is always made between *felonies* and *misdemeanors*. They form separate categories; and whereas nearly all of the latter class of offences were punishable by summary conviction, none of the former were, until very recently; when statutes were at length passed giving magistrates the power of summarily convicting for all larcenies committed by children, and also by adults where the property stolen is under the value of five shillings. Nevertheless, these are still felonies, and regarded strictly as *crimes*. A few offences (which are equally criminal) have been technically called "misdemeanors," such as obtaining money by false pretences. I mean by crimes to include all offences so far criminal generically, as to involve a direct breach of the law, whether punished summarily or not. I would, for the purpose of dealing with the different classes of children in view, regard all as actually criminal who have been convicted, even summarily, of any offence *beyond vagrancy*, which is, at best, a very indefinite offence; and for many years a prudential reluctance existed to deal with it penally. In Scotland, Dunlop's Act, 17 & 18 Vict., c. 74, has latterly extended the net, and gives to the offence an application which embraces well nigh every child who is not properly cared for. It goes the length of enabling magistrates to commit to a certified reformatory any child under fourteen found begging or having no home or proper guardianship, *though not charged with any actual offence*. The parents or parish of the child might however bail them, as it were, out of the hands of the magistrate by finding proper security for their due schooling and good behaviour. This was again enlarged by the Act of 19 & 20 Vict., c. 28., enabling the magistrates to decline such securities, and also to detain the child forty-eight hours while inquiries are being made about him.* A similar Act has been passed for the

* Alfred Hill, Esq., in his able paper on this subject, at the Bristol Conference, says, on the working of these Acts:—"The benefit of the Act is by no means to be measured by the number of children actually sent to school under it. I was informed at Edinburgh last March that, in the great majority of instances, the parishes there found security rather than allow the children to be sent to the schools.

"An indirect benefit is probably derived from the Act, in that the fear of its being enforced induces parents and parishes to board children at the schools by arrangement, or otherwise provide for them,

county of Middlesex. I would not classify or treat children committed under such statutes as these, or for any mere acts of vagrancy, as children convicted of crimes. They would fall within Class B. Whether such children should be dealt with by being sent to certified industrial feeding schools, as Sir Stafford Northcote's recent bill proposed, or to district union schools, I regard as a matter of minor moment; provided that schools be organized for the purpose, which is not yet the case. There may be little distinction between the vagrant or ill-cared for child and the present inmates of our workhouses, who are, in fact, greatly composed of that class already. But there is the strongest distinction between such children—to whom no moral culpability necessarily attaches,—and those who *malo animo* have committed crimes, no matter under what palliating circumstances. THE ONE HAS ACTUALLY BECOME CRIMINAL, THE OTHER HAS NOT. The law has, from time immemorial, established, and the moral sense of society sanctions, such demarcation; and I trust it may never be effaced. I would treat the children in Class B. as unfortunates who had erred without discernment, and those in Class A. as criminals, no matter with what extenuation, and as having broken the law by which society protects itself from wilful injuries to property and person, and which it THEREFORE punishes. The philanthropy errs which ignores the principle and opposes the practice, of this law of penal justice. It is justice to the wrongdoer—justice to those whom punishment may deter from crime—and justice to society at large whose persons and property it protects.

§ 7.—CONVICTED CRIMINALS ONLY SHOULD BE PUNISHED.

This portion of the subject much affects the reasons for the distinct classification of the children we have to deal with: but as it need not be elaborately argued that crime should be punished, I will merely refer those who still think otherwise to the well put arguments of Sir Stafford Northcote in vindication of the punishment of crimes by juvenile offenders in his paper on that subject, read at the Bristol meeting. It being thus well established that crime (which does not exist without the *malus animus*) must be punished whether in the young or the old, how clear and imperative becomes the

---

so that they do not continue to be vagrants. It is right to state that some of the most active supporters of industrial schools in Scotland entertain serious doubts of the policy of compelling all the children, who have been sent to schools under the Act, to be lodged within the buildings at night. In many cases it is believed that such pupils might be advantageously allowed to return in the evening to their friends. Perhaps it would be politic to grant to the directors of the schools a discretion, either to lodge the children within the building, or to permit them to go home, or possibly, as frequently has been done with friendless children at Aberdeen, to make arrangements for their abode with humble families of good character. Many schools having been recently sanctioned under the Act, there will soon be a large body of valuable experience of its working."

necessity of an entirely distinct dealing with the two classes! The great need, at present, is a preliminary sifting and sorting. In one of the reformatories I inspect, there are some boys noted as accomplished felons together with one whose sole known offence is that he swore at a donkey! The inmates are—as will long be the case—too promiscuously herded as to age and character. It is, therefore, important not to increase this evil by any further delay in drawing the line rigorously between the convicted and the non-convicted. I would, therefore, earnestly recommend that children in Class A. should always pass from imprisonment to reformatories, and that those in Class B. should never be imprisoned or sent to reformatories. I would segregate class A. wholly from class B., but I would not, as far as treatment went, exclude class B. either from those schools (district or otherwise) to which paupers (indoor or outdoor) are now, or may hereafter be sent; or from ragged industrial feeding schools. They are I beg to repeat of the same genus, nor do I apprehend any evil in blending, and regarding them as one class, equally distinct from the criminal class A. below them, and from the children in the common schools above them. I venture to submit that, while this classification is absolutely requisite, to adopt less would most injuriously obliterate distinctions which are essential to the moral interests of society.

§ 8.—Best Mode of punishing Juvenile Crime.

The question next arises how to deal with Class A.

I have always been of opinion that though crime ought to be severely punished, such punishment should be so inflicted as to exonerate the child from the stigma which, rightly or wrongly, Englishmen (who are characteristically tenacious of popular bans) will, I think, for a long time to come continue to attach to anyone who has been in a common gaol. Lord Stanley put this point well and concisely thus to the Bristol Conference:—

"Much ingenuity has been expended in arguing the question whether the penal element, as it is called, should be excluded from the reformatory process—whether the training undergone should tend solely to the improvement of the offender, or whether it should include also the idea of reparation to society for work done. I confess the distinction appears to me rather verbal than real. When you turn a drunkard into a temperate man, a vagrant into a settled and steady member of society, a thief into a labourer, no one doubts that the process is in each case reformatory. But, if punishment means the causing of pain, the process is penal too, for nature has so ordered it that bad habits cannot be changed into good without considerable though temporary suffering. The practical form which this question assumes is whether imprisonment, previous to the removal to a reformatory, is desirable or no. You will hear that subject discussed to-morrow. I give no judgment. I note only, on the one hand, that an interval of absolute seclusion may have its advantages, as rendering the change to society, even though accompanied with labour, an agreeable instead of a painful one; while, on the other, there is to be considered the *stigma of imprisonment*, which will always adhere to him, and also in some cases the risk of corrupting associations."

M. De Metz speaks still more strongly of the evil of this stigma; and it is thought to be so great an evil to be thus "blighted by condemnation," that previous penal imprisonment is altogether remitted to those who become *détenus* at Mettray. Miss Carpenter, also, in her excellent work on Reformatory Schools (p. 287), says—"the child is dealt unjustly by in being exposed to the same severity of punishment and the same *brand of criminality* as the adult."* It thus occurred to me that we might combine the two objects sought, without detriment to either principle—the penal or the reformatory—by administering both disciplines under one roof: but in two entirely distinct establishments, and, except as regards the manager and chaplain, under equally distinct officers.† It is done at Parkhurst, I thought, with remarkable facility and apparent success; and here is an extract from the account which Captain Hall now favours me with of the provisions made and their practical result up to this time:—

§ 9.—System at Parkhurst.

"My dear Sir, *Parkhurst Prison, 17 February* 1857.

"I am sorry that I have not been able to reply sooner to your letter of the 9th instant.

"You are quite correct in your recollection of the general system in operation at Parkhurst, which is to place each prisoner, on his reception, in the probationary ward, where he remains for four months. During that term he attends school for three hours in the afternoon of each day, and for three hours also in the afternoons of five days, amounting together to thirty-three hours per week.

"He has no work to perform in that ward beyond his share of the scouring, sweeping, and cleaning of the cells, galleries, stairs, and corridor of the ward, on Wednesday or Saturday afternoon, but he has his slate and lesson-books in his cell, and a book from the lending-library, besides his Bible, Prayer Book, and Hymn Book.

"Boys in the probationary ward attend school collectively; and, during their recesses, they are allowed to associate in the presence and under the supervision of masters.

"I am of opinion that this probationary stage is useful in various ways:—1st. While it is not so unnatural a condition as entirely separate confinement, and affords opportunity for development of the real character of a lad, the number under observation at any one time is so limited that an intelligent schoolmaster or superior officer can acquaint himself with the disposition of each individual so as to be enabled to apply the admonition, reproof, or encouragement, which appears to be needed by him.

"2nd. The time allotted to school instruction in that ward—equivalent altogether to seventy-one days of eight hours each—is, in most cases, sufficient, when added to the teaching which these boys have previously received in other prisons or at liberty, to enable them to read pretty well and to write tolerably, so that when they are transferred to the general or junior wards, in which they cannot attend school so frequently the greater part of their time may, without disadvantage, be occupied in industrial employments.

"3rd. The time which the probationary ward pass in their separate cells affords to the prisoner favourable opportunity for consideration of his past life, present condition, and future prospects, as well as for visits from the governor, chaplain, and others, who will endeavour to give a better direction to the boy's desires and purposes before he is again thrown into the society of a large number of other juvenile criminals.

---

* Miss Carpenter concedes the expediency of the previous imprisonment of the convict child. (See Appendix B.)

† Sir Stafford Northcote controverted this view at Bristol, but mistook the scheme in question, imagining that the place of previous detention would be the reformatory; whereas the plan is to have entirely distinct establishments, though in the same locality.

"I find that boys are far less liable to get into trouble by misconduct after coming out of the probationary ward now than they were formerly, when separate confinement was strictly enforced there, and when the sudden transition to full association with a large number of other boys often proved too exciting to be safely borne.

"If a boy's conduct during four months in the probationary ward is very troublesome, he may be detained there for another month, but I have very seldom found it necessary to have recourse to this protraction of the probationary term.

"The prisoners rise at half-past five, and after washing and dressing themselves, making their beds, and sweeping the floor of their cells, are assembled in chapel, where the morning prayers commence at seven.

"They have half an hour's exercise in the yard after breakfast and also after dinner, before going into school, and they have a recess for twenty minutes in the midst of their school hours each forenoon and afternoon. They take their meals in separation. In the evening they come out into the galleries of the ward, in front of their cell doors, while prayers are read, and at chapel in the morning the probationary ward are seated together, and all see each other, though they are screened off from the general and junior wards.

"When his probationary term has been completed, each boy is transferred, according to his age and size, to one of the other wards. The general wards are arranged in nine sections of thirty to thirty-six prisoners each, who work together, and are always under the same officers. All those of the same trade are placed in the same section; each section forms one school class; they attend school for one forenoon of four hours in each week, and again, after an interval of three days, for an afternoon of five hours, relieved in each case by a recess of twenty minutes. They labour from eight till twelve and from one till six o'clock daily, when it is not their turn for school, and this industrial employment is, in my opinion, of the greatest value as training for future usefulness in life.

"The more that boys of this character can be accustomed to labour energetically, cheerfully, and with spirit and interest in their work, the greater will be the confidence which may reasonably be indulged, that they will pursue a course of active industry when restored to liberty; and to this end it is very desirable, I think, that arrangements should be made to enable a boy to realize that his own comforts and advantages of condition are improved by persevering industry.

"Each warder in charge of a section makes a report every week of the industry as well as general conduct of the prisoners under his charge, and it is the continued good report in these books, as well as in the schoolmaster's register, that entitles a boy to be admitted into the evening school class, where he is allowed to write to his friends and to enjoy other privileges, including a small weekly rate of earnings or wages carried to his credit, the sum of which is paid to him on his liberation from prison. The badge, which is a token of approved conduct, is advanced from stage to stage at certain periods; and when the highest badge has been worn nine months, a convict is eligible for a ticket of leave, but misconduct may retard a boy's advancement to a higher class, and thus prolong his detention in prison, and it may also involve the forfeiture of earnings. Boys, however, are indisposed to forethought, and are little influenced by the prospect of future advantages or privations: the more therefore that their immediate personal comfort can be made to depend on their industry and good conduct, the greater will be the probability that a habit of self-control and active persevering industry will be induced.

"The disposition to seek a change from one trade or employment to another as soon as the first has lost the interest of novelty is very common, and requires to be checked.

"I have found it better, therefore, when reasoning fails to dissuade a boy from pressing his request for removal from his trade, to comply with his request after having given him time to consider it fully, and I then tell him that I shall not allow him to have another trade, but shall keep him at field labour during the remainder of his time.

* * * * *

"I remain, &c.

"Jelinger C. Symons, Esq., Privy Council Office. (Signed) George Hall."

§ 10.—Joint Penal and Reformatory Building preferable to Gaol.

It is thus easy so to organise the two departments that the entire distinctions between the preliminary penal and the reformatory stages be preserved in the child's mind. The incidents of the two lives would in fact be as distinct as light and darkness.

The first might be chiefly cellular and separate confinement on very low diet, for a certain number of days together, varied only by such hard labour as cells admit of, school instruction, and such exercise as health requires. In all cases where the judge or committing magistrates think fit, there will also be the initiatory whipping which the law now inflicts, and which I apprehend it is not intended to abolish. The second stage would be nowise penal, but wholly reformatory and industrial; the system so arranged as to make the whole of the instruction and work rather a pleasure than a penalty. I concur entirely with Sir Stafford Northcote in these opinions:—

"It is indeed said by some that the mere compulsory detention of a boy in a school, as at present conducted, is in itself a punishment, and that there would be no occasion for giving the schools a more distinctly penal character. I scarcely feel it necessary on the present occasion to do more than express my unqualified dissent from the notion that our private reformatory schools are or ought to be regarded as places of punishment. They are intended to win boys back from a life of vagrancy, misery, and crime, and to give them a taste for steady labour and a feeling for home; to do this, it is essential that they should be not repulsive, but attractive. No one desires to make them luxurious, or to invest them with an appearance which shall raise jealous feelings on the part of the honest poor."

* * * * * *

"Punishment for past offences should be administered before the boy comes to the reformatory school; but of what nature should that punishment be? One thing I think is clear, that, it should not be associated imprisonment. The objections against the corrupting influence of imprisonment of this kind appear to me unanswerable.

* * * * * *

"With regard to corporal punishment, I do not share in the feelings of repugnance with which many persons look upon it. I believe that it may often be administered with good effect, and may prove a valuable instrument both of school and prison discipline. For young offenders too it is often peculiarly suited. It may be much better to take a boy caught stealing apples, give him a flogging, and let him go, than to shut him up in prison for a fortnight or three weeks. But, for the class of boys who are sent to our reformatories, whipping is not, I think, a particularly good punishment. They are generally boys who have been a good deal knocked about and ill-treated at home, and who either do not care for a flogging or else are roused to anger and vindictive feelings by it. It may do them harm; it is seldom likely to do them much good. The punishment which is really valuable as a preparation for the reformatory school is a short imprisonment on the separate system."

M. De Metz and Mr. Sidney Turner have expressed similar opinions.

By combining the penal and reformatory discipline in separate buildings of the same establishment, we might, I think, secure these great benefits:—

1. It would enable us to cease to send children to gaols. They might be committed at once to the penal side of the establishment, being exempted from hard labour and low diet till after conviction, when they were awaiting trial.

2. The superintendence and knowledge of each inmate through each stage of his career from the day of his committal.

3. It enables these officers to shorten the term of imprisonment according to symptoms of penitence, and earlier than it could be otherwise done in a distant gaol; because it would be easy to send the inmate back to the penal department on

any sufficient indication of relapse, proving him to be yet unworthy of the freedom of the reformatory.

The only valid objection to this plan seems to be its greater cost. It would also require considerable additions to the buildings of existing reformatories.

It is so perfectly the established system at present to to institute these places in the roughest and simplest manner, and at the smallest possible cost, that I am quite conscious how little feasible is the adoption of my plan consistently with the prevailing desire to reform young offenders cheaply, and by means within the compass of private benevolence. I have set forth in detail (*vide Appendix* C.) the plan by which I think such an establishment might nevertheless be organised and conducted at no very great expense. In the meantime one of the best plans seems to me to be that of re-organising and improving the existing provisions in each common gaol for the reception and training of convicted children. In the first place, they should be kept, from the moment of their admission, *wholly apart* from the adult prisoners. I can conceive of no corruption worse than such as I have myself witnessed, even in a gaol where the separate system is rigidly adopted; for even there, *before trial*, children and adults were intermixed promiscuously; and there are many prisons where this is now the only practicable system. It is obvious that this should be stopped, and at all sacrifices, and let the expense be what it may. We may just as well declare that we will begin by corrupting all young offenders, and confirm them to the uttermost in crime, as commit them to such prisons. "I learned more dodges in W—— gaol," said a young boy to me in the —— reformatory, "than I was ever put up to out of it." It will, however, be no easy task to administer imprisonment in a reformatory spirit and with reformatory effects in gaol. The unanimous evidence of gaol chaplains represents the extreme difficulty of managing juvenile prisoners. They declare it to be much greater than managing adults. The Rev. T. Carter, chaplain of the Liverpool Borough gaol, has, in common with many others, expressed his strong objection to short imprisonments. He says, the boy "leaves the prison more callous than when he entered it." Miss Carpenter, with equal justice, objects to long ones. A "sharp and short imprisonment" was my original suggestion, and I adhere to it still; but I would make it a prelude to reformation as at Parkhurst. This would, however, require re-organization and increased appliances in common gaols. This being done, might it not be desirable to give to judges and committing magistrates a discretion, whether to send children under twelve

years of age to gaol for fourteen days at least, or directly to a reformatory, leaving it compulsory, as it now is, upon them to sentence all children above twelve first to gaol? The proportion is very small of the children being under twelve years who would fall into Class A. In Gloucester district it appears that none have done so during the last four years, and in the Bristol district only six. Even the present small proportion would be smaller still under the further extension of a reformatory system. I would under all circumstances reserve reformatories for Class A. of young criminals. It is a moot point, and one of great doubt, whether the maintenance of any other class being neither actually criminal nor pauper, should be charged on the public. I cannot but strongly incline to think that none should who have not by some overt act evidenced the extreme probability of their speedy lapse into crime.

§ 11.—Danger of Remitting Parental Responsibility.

The principle of mixing disreputable children with those who are simply destitute is also objectionable, though practically unavoidable; for such admixture must and does exist in every workhouse, but it should, I think, be as little increased as possible by new laws. To pauperise people wholesale by taking charge of their children simply because they are neglected by their parents, would be as bad as the evil it proposes to cure. It would be a direct premium to parental neglect. This peril is by no means chimerical. It attaches already to the reformatory, and operates still more strongly in the case of less obnoxious asylums, such as industrial feeding schools and the like. I should be very sorry to see the door opened to voluntary pauperism, so as to afford the slightest additional facilities to unprincipled people to neglect their duties and throw parental responsibilities upon the State. The sole check to this, and the only justification of such a power, is the provision that the parent may be charged compulsorily with the child's maintenance. Hitherto this has failed, except in a small number of cases Doubtless the higher we ascend in the social scale, the larger will be the proportion of parents whom it will be practicable to catch and mulct. But there will always be a large number of waifs and vagabonds among the population who will easily slip out of the noose and give leg bail for their children.

§ 12.—The Bills for Reformatories and Industrial Feeding Schools.

A bill was introduced into the last Parliament, by Sir Stafford Northcote, for giving power to magistrates to commit vagrant

children "not having any home or settled place of abode, or proper guardianship, or any lawful or visible means of subsistence," to what he terms "certified industrial schools." There is no provision, however, for organizing such schools. Their establishment is left to private effort, unaided, as regards building, by public grants.*

Sir George Grey also introduced a measure to enlarge the present facilities for establishing and supporting reformatories, by giving powers to counties and boroughs to provide and charge them on the county rates, to be managed by a committee of justices.

How far these permissive measures would insure establishments of each class, adequate alike in number and capability to deal effectually with the hordes of children, both peccant and errant, who need them, and how far the latter bill might affect private reformatories already in existence, it were premature to say.

§ 13.—Failures to be avoided.

Failures deter more than successes encourage. All fashions, even philanthropic fashions, wane. There can be no doubt that the whole reformatory movement owes much to its novelty; nor is it any slur on the active and sterling benevolence which has prompted it to say so. Now if it happen that disasters ensue, and that when the time comes, which has yet to come, that numbers of the children now in training go forth to exhibit its fruits in their future conduct,—society, instead of finding reformation effected, experiences its inefficacy in the relapse of the patients, disappointed hopes will speedily retract the approval and credit which now invite and buoy up reformatory efforts. Foreseeing the too great probability of some such result, I am more apprehensive of future reaction from the collapse of public prestige in favour of reformatories, than of present evils in starting them prematurely. It seems to be on these prospective accounts essential that we should, by all possible means, urgently impress on those who have undertaken or contemplate the establishment of either class of school, but especially of reformatories, a correct sense of the difficulties which really encompass the work,—the best means of effecting it,—and, above all, the intensely hurtful effect of the failures which an insufficient estimate of these requirements must entail hereafter.

---

* At least under existing Minutes.

§ 14.—Importance of internal Discipline and Accommodation.

The means by which reformatories are to be started, their general organization, and the degree in which they shall originate with individuals aided by Government, or be alike created and managed by the State, I deem points of far less moment than the internal discipline of the establishment, and the practical manner in which the work is done. There are no short cuts to the confidence of the public in this matter. That confidence, together with the ultimate success of the work, depends solely on the system of training adopted, and to this vital point I beg leave to address the remainder of my remarks.

I would premise that nearly all the remarks and suggestions that follow apply equally to certified industrial feeding schools and to reformatories.

§ 15.—Buildings.

The inadequate notion of the requirements of reformatories is shown in the defective accommodation in respect to buildings. The belief that the rough homeliness of the house and offices selected for the reformatory is a desideratum has, I think, been carried too far in some cases which have come under my observation. It may not be always necessary to go to the expense incurred at Redhill, Parkhurst, or Mettray, but there are other establishments where there is neither space, ventilation, outlet, nor the necessary provisions for health or cleanliness. Insufficient dormitories are a main feature in this category of defects. I cannot express too strongly my conviction that, inasmuch as it is universally admitted that it is at night that the mischief of contamination goes on, it is by the due arrangement and precautions of the dormitory that we must mainly apply preventives to the corruption of the more innocent by the more depraved,—the besetting peril of all reformatories, and the parent of many failures. In the first place, I deem it essential that there should be sufficient space to admit of each bed being so partitioned off from the rest that no inmate can converse with or see his neighbours. A trusty warder should invariably sleep either in the same room or in a room which opens into the dormitory, with the means at all times of seeing, as well as hearing, what passes; for which purpose a light should be always burning in the dormitory. It will probably be said that these are stringent requirements, involving expense, and that they are not requisite, inasmuch as reformation proceeds very nicely without them. Now, in the first place, if there be sufficient space,

there is no great expense in the partitions. It has been done at Kingswood, near Bristol, at no great cost, and with good result. If there be not space, and if there be not funds sufficient for such precautions, I would unhesitatingly say that no attempt should be made in such a case to establish a reformatory. If the funds are not attainable to provide the precautions which all experience has shown to be necessary to success, that is a good reason for abstaining from the enterprise, but a very bad excuse for dispensing with such precautions, and incurring the risk of worse evils than we cure. It is, moreover, quite premature to say that reformation goes on well. That is yet to be proved. If the various statistics of reformation are carefully tested, and the accounts on which they rest subjected to rigorous examination, it will be found that the alleged successes are often extremely problematical, and that the utmost we can yet say of a system which embraces so many recently commenced reformatories is that it must neither be hastily condemned nor accredited. It is upon its trial. Its establishment as a permanent institution, or its lapse among exploded experiments, depends, I am persuaded, wholly on the adoption or neglect of the practical means of success to which I am referring.

§ 16.—Ventilation.

Most of the dormitories I have yet seen are ill-ventilated. The means of effectual ventilation are so simple that I cannot think any excuse sufficient for a defect in this all important preservation of health. It consists simply in sufficient outlet aloft. Foul air rises, and if vent be given it above, plenty of fresh air will find its way into the lower part of a room to cause a gentle current of fresh air, which will answer every purpose. Sir John Walsham's perforated air-tubes, or perforated glass panes or plates of perforated zinc on opposite sides of a room, placed about nine inches below the ceiling, will ensure ventilation. This is essential everywhere, but especially where the vigour of body arising from well-oxygenized air is indispensable to that systematic labor which is a main means of reformation. All these physical necessities are also moral agents, and cannot be safely neglected. Many people who concur with these views nevertheless believe that their own dormitories are very satisfactorily ventilated, on no better ground than that during the day they find the air fresh in them. Windows are pointed out as affording conclusive proof of this. It is forgotten that though such windows are usually open by day, they are generally shut at night,

and afford no ventilation when it is most needed; nor, in fact, would it be safe to open them then for such purpose. If the managers were to go into some of these dormitories at three or four o'clock in the morning, and were to be confined in them for three or four hours, we should never hear afterwards that such rooms were "well ventilated enough:" and the only efficient means of doing so would be adopted. As all the lower orders of the people have a general antipathy to fresh air at night, it never does to leave ventilation at their disposal. On this account no traps capable of being shut at their pleasure suffice.

§ 17.—Labor.

This is the back bone of reformation. No one can attach more weight than I do to the agencies of religion and kindness. They touch the heart and soften the asperities of a vicious nature, even if they fail to Christianise. But there must be a change of habit as well as of mind, and the change of habit mostly needed is from some kind of idleness to some kind of industry. We are dealing with a class whose vocation is labor; and whose vices and virtues are infallibly connected with indolence or industry. There is no penitence either in man or lad who shirks hard work; nor is there any better evidence of the reality of the conversion of a criminal than the sweat of his brow. It beats all professions, however well they sound. Toil is, moreover, a natural corrective of vice; it takes it out of a man, it gives him a taste of the dignity of independence, and shews him the way to secure it. I think that many reformatories fail in this chief requisite. I find such answers as these common to the inquiry "How do the lads work?"—"As well as you can expect from such like;" or, "Not more than they can help;" "As well as we dare make them," &c. I confess that this does not satisfy me, especially coupled with the desultory way in which I sometimes see them work, or pretend to work. It is also significant that few, if any, of the annual reports put forth of reformatories report at all, or more than slightly, on this essential part of what is required of them. I dread to ask the reason. Miss Carpenter, who fully appreciates the vital necessity of the industrial agent, remarks in her last (prize) essay on the subject:—"In reformatories for girls the want of any equivalent for agricultural work is *greatly felt*, something which, while strengthening the physical powers and affording a healthy moral stimulus, shall prepare the girl for her future life." The committee of the Kingswood Reformatory deem "an adequate daily amount of industrial occupation" "next in importance to the observance of religious duties." Sir

Stafford Northcote has organized an excellent system of field labour at the Pynes Reformatory, where I have seen very stiff digging done with vigour by the lads under the superintendence of a serjeant. At Parkhurst the industrial system is laborious, amounts to travaux forcés, and results in good effects. I believe hard work is done at Redhill, and I have seen it right well done at Hardwicke.

Of the best labour systems I would now speak briefly. Spade husbandry, with other farm and fieldwork, is healthy, strength-giving, and visibly productive. This latter quality is should always be secured.

Nothing can be more mistaken than to make work optional, and feed and clothe offenders who choose to shirk earning their bread. I would in all cases make this compulsory ; and any sum requisite for an adequate staff of officers to do this would be well expended and soon repay itself. But having done this, I would bring home to the personal experience of each inmate the fruit of labor, by giving him not only a visible perception of, but a share in it. I have thought a good deal how this may best be done, and I would venture to submit this outline of a scheme.

1. Let an accurate account be kept of all outlay and income of the industrial department of the reformatory. [In many cases this is not done.]

2. Let these accounts be periodically laid before the whole of the inmates, and thoroughly explained to them.

3. Let weekly marks be entered in a separate account to be called "The Work Book," to the credit of each worker, according to the amount and quality of his individual labour. One, two, three, four, or five marks will sufficiently graduate and indicate the industrial merit of each.

4. Let a fixed per-centage of the entire profit be divided at stated periods among the workers, in exact proportion to their respective marks in "The Work Book."

5. Let the money thus ascertained be credited to each worker, half of which to be placed in a savings bank for him until his final departure, and half given to him to be spent or saved at his option.

Two great advantages seem to me to flow from this plan. *First*, labor will have a money value in the eye of the laborer. *Secondly*, each will have a direct interest not only in his or her own toil, but in the exertion of the rest; and the idleness of any, inasmuch as it will diminish the fund to be divided, will be under the ban of all. It will be a joint stock of industry. I believe that this system, if thoroughly and strictly carried out, will accomplish more hard work than

a regiment of soldiers could enforce. It would be easy to give those who wished to spend half of their earnings the means of purchasing additions to their ordinary food, as well as clothing and books. All kinds of labor fit for reformatories are susceptible of this arrangement, and just as much so those for girls as for boys. The proceeds of nearly any kind of such labour will naturally go to the supply of the establishment, but, as is done in workhouses, its exact value should always be estimated in money and debited to the establishment. This may be done with equal facility where the labor is applied in spade husbandry, clothes-making, carpentering, baking, needlework, washing, &c. The usual mode is to give each working child a fixed weekly sum, making deductions for overt acts of negligence, gross idleness, or misconduct. This system gives very little inducement to really effective labor, and no direct interest in its productiveness, which is essential to the cultivation of labor-zeal. It faultily and very partially elicits emulation in industry; and it is wholly ineffective in giving each an interest in the labor of the others. Of the different kinds of labor fitted for reformatories little need be said, as they are obvious enough. For boys, spade husbandry is justly most esteemed. The commoner trades may be profitably superadded. For girls, washing, cooking, (dairywork where practicable,) plain needlework, and all kinds of household work complete the category. The assistants and superintendents should be instructors as well as master workers. This is far too little done. It is far easier to let the children do mechanically the inferior part of the work than to teach them how to perfect it, or to initiate them into the higher branches of the craft, and show them the why and the wherefore. Industrial instruction, unless this be done, degenerates into drudgery, and becomes mere taskwork, whereas it ought to stand in lieu of apprenticeship. Spade husbandry is unquestionably the best kind of labor for boys. I had originally the honor eight years ago of suggesting (in my first report on workhouse schools to the Committee of Council) the details of a scheme by which spade labor might be made available and profitable alike in morals, money, and instructional work. I have since had the satisfaction of seeing my views widely adopted in the organization of reformatories. Such trades as supply the immediate wants of the farm and school should, I think, be superadded; such as carpenters' and blacksmiths' shops. Shoemaking and tailoring are employments which must be regarded as an evil necessity, for they are overstocked trades, and conduce not to physical strength. It is a mistake to occupy a great quantity of land. An acre to five or six lads is ample.

At Redhill far too much land was originally taken; the art of conducting a large farm is a very distinct thing from the reformatory objects of cultivating land. The meagre proceeds and large expenditure* of the Redhill Farm School give incontestible proof of this mistake, especially when compared with the 7*l.*, 10*l.*, and 15*l.* yearly *net profit per acre* realized, as each of my union school reports have testified, at those farm schools where the land is proportioned to the labour-power of the boys, and cultivated, as moderately-sized parcels alone can be profitably, with the spade only, and as farm *gardens* rather than farm *lands*. Mr. Wolryche Whitmore was of this opinion, and very sensibly limited the South-east Salop (Quatt) District School to ten acres, though no trades are taught to divert the industry of the children from the land and dairy, and with the best results both as to profit and training. It is essential to keep cows and pigs. No spade labour system is profitable or complete without the creation of their food be secured by manure and such cultivation of the land as best answers the purposes of instructional industry.

§ 18.—Joint Reformatories for Boys and Girls.

The desirability that girls should have the benefit of instruction in farm work makes me anxious that there should soon be a model reformatory for both sexes, so that girls may be trained as farmer's servants and also as dairy-maids. This, for obvious reasons, cannot be done without a juxtaposition of the male and female reformatories. I have prepared a scheme and plan of buildings ready for effecting this object, combining these desiderata, viz.: *first*, complete severance of sexes; *secondly*, all the requisite farming facilities for teaching the girls every kind of female farm service, with gardening; *thirdly*, great saving of expense over two distant and separate establishments.

§ 19.—Ship Reformatories.

Before entering on the proper employments for girls, permit me, my Lords, to speak of ship reformatories for boys.

The first and only ship reformatory is the "Akbar." It is the hull of an old man-of-war moored in the Mersey. The report of it at the annual meeting in December last describes it as successful and costly. It numbered 64 boys, and will accommodate 150. The key-stone of the system is said to be

* After deducting the farm produce, the total cost per head of Redhill last year was 26*l.* 11*s.* per inmate; a sum which suffices to clothe, feed, and support many a peasant's whole family.

that of assimilating it as much as possible to the work and discipline of a man-of-war.

"The course of instruction (they report) consists of the ordinary routine of reading, writing, arithmetic, and geography, and includes a short Bible lesson every day; the boys are also instructed by the schoolmaster in the leadline marks and the use of the compass. The nautical instruction consists of teaching to knot and splice; to hand, reef, furl, bend, and unbend topsails; to reeve and unreeve running gear; to shift yards, topmasts, and rigging; to make sails; to heave the lead; to make sinnet and gaskets; to draw and knot yarns; and to row in the boats. They have also to wash and mend their own clothes, and some of them are always employed with the carpenter."

A sum of 1,818*l.* 6*s.* 8*d.* was spent in fitting up the hulk with masts, sails, rigging, and accommodation.* The average cost hereafter is estimated at about 23*l.* per head, when there are 150 boys, or less than Redhill by 3*l.* 11*s.* The discipline is excellent. The attempts to escape have greatly decreased. One only took effect; and so great was the power obtained over the lads by Lieutenant Veitch, their superintendent, that, when he left in December last, they clustered round him, begged him to stay, and offered to bribe him with a week's provisions if he would. His successor, Commander Fenwick, says that no boys ever gave him less trouble.

I should like to see ship reformatories established at Bristol; and also in Milford Haven near the dockyard, where there would be plenty of labor of various kinds, besides dredging for oysters. The cost of maintenance on board a ship will always be lightened by a smaller set-off from the produce of labor than in inland reformatories. The staff required is necessarily heavier and the instruction of a more skilled character. But then it must be borne in mind, first, that the training given will result in far higher wages, and in more profitable service to the common weal; for one good sailor is a greater benefit than two such farm-labourers as our land reformatories will turn out at the end of the same time. Secondly, it might be easily arranged by and between the managers, the boy, and the future master of the ship to which he was consigned, that a portion of the boy's wages for the first year or two should be paid to the manager for his past maintenance in the ship reformatory, an advantage over farm-labor, where this would be less practicable: for the wages of a farm-servant are paid in weekly dribblets, those of a seaman in a large amount at the end of voyages. It would be difficult to collect weekly per-centages of 3*s.* 4*d.*, but easy from sums of 10*l.* or 15*l.* paid at long intervals.

The hard labor of rowing, &c., is exactly adapted to reformation; so is naval discipline. The means of confinement are great, and escapes may be far more effectually prevented

* The Admiralty might supply other vessels for the future ready fitted in these respects.

than on land. These are vast advantages. I trust, therefore, that ship reformatories will spread and multiply.

Mr. Philpotts sent a paper to the Bristol meeting, in which he made the following suggestions on this subject, and which it may be well to record here:—

"There are lying in ordinary at all our ports a large number of line-of-battle ships, whose services are not likely ever to be required, as both their tonnage and capacity are smaller than ships of that description building by other nations.

"If a sufficient number of these ships were fitted up at Portsmouth, Plymouth, Sheerness, and Pembroke for the reception of 1,000 boys each they might be called '*Instruction Ships.*'

"I would suggest that the Legislature should pass an Act authorizing two or three magistrates associated in petty sessions to examine all youths under eighteen who should be charged with any felony, larceny, or serious misdemeanor; and if they considered the evidence so strong as to afford a fair presumption of guilt they should be authorized to require the delinquent to be *apprenticed to Her Majesty* until they should attain the age of twenty-one, *instead of committing them to gaol*, and should at once send them to the nearest Instruction Ship. In these vessels, under the superintendence of proper instructors, these boys would be taught almost everything necessary to make them sailors. * * * They would be berthed, messed, and quartered as on board a man-of-war—would be clothed as sailors—make-up, sling, and every morning stow their hammocks as is done at sea. They would wash their own linen, appear clean every day at quarters, and be subject to all the rules and discipline of a man-of-war. In summer they should be taught to swim, and to pull an oar and steer a boat; so that at the *expiration of two years* they would be qualified to serve in Her Majesty's ships as ordinary seamen, and a very few months at sea would make them able seamen."

§ 20.—Industrial Requirements in Girls' Reformatories.

Miss Carpenter, in her Prize Essay, says:—

"Some have proposed establishing a farm school for girls. It is a very interesting experiment, and should it succeed there will doubtless be openings found in our colonies as well as in agricultural districts in our own country for farm servants. In general, however, we must rather aim to prepare our girls for domestic service;—the home is the natural sphere for the woman, and whatever best fits her for it should be the object of the reformatory industrial training. Washing and laundry work afford excellent exercise for the older girls, and if well taught will prove valuable acquirements to them in afterlife. As much useful housework as possible should be provided for them, and any other actual occupation which the circumstances of the place may suggest. Plain sewing in all its branches, as well as knitting, should be carefully and thoroughly taught. These occupations have a tranquilizing effect on the excitable natures of these girls; they may also be made a source of revenue to the school."

All this is excellent; but, as Miss Carpenter herself feels, more of bodily labor requiring muscular exertion is needed. The household work, moreover, taught to girls is generally extremely defective. In most reformatories so it will be as long as a few of the older girls alone do the little work there is to be done in such establishments, while the rest are sewing or getting a little superficial education of problematical utility. I am convinced that the cost of organizing effective systems, with proper apparatus for laundry, dairy, cooking, household, and nursery work, is not to be weighed for a moment against the profitableness of such training. I take it the washing-tub or churn will tranquilize the nervous system, and quell excitability, a great deal better than needlework. In all cases, and for both sexes, I would rigorously enforce the just prin-

ciple of making the children earn their daily bread. If the reformatory be so organized that from any circumstances, no matter what they may be, a child can shirk his work and get his dinner; and, if labor be not a *sine quâ non* to food, the sooner such a reformatory be altogether abandoned the better; for it can have no real reformatory effect, and is simply fostering a delusion of which the practical results will assuredly discredit the cause.

§ 21.—Moral Training and Conduct Registers.

Moral training and religious teaching are all essential, but depend altogether on the teacher and on those who superintend the children. The most profound and unquestionably sound doctrine, the most regular reading and the clearest exposition of Holy Scripture, will be ineffectual, unless the teacher be himself imbued with its joyous spirit, and show it forth in his life and talk and acts. No set rules will teach us how to Christianise, and that is the reason why so few can be found who are real reformatists; for it is heart-work, and we cannot coin the gift of doing it. There is one great aid to any reformatory treatment, which however defective, that aid will supplement. I mean an exact and faithful periodical register of the moral as well as industrial progress of the children. I would have registers of conduct kept in every reformatory, and full entries made at least every quarter; made too, with overt care and as a serious and responsible thing; managers and teachers consulting over it; rewards, promotions, and censures flowing from it. And the school should know this. Each inmate should know what was registered of him. I incline to think that the rest should not, but on this point I imagine discretion would be best exercised by, and left to, the managers. Ancillary to such a quarterly record, there should be a weekly conduct-book. It might be thus classified,—1. Personal conduct; 2. Obedience; 3. Industry; 4. School; with five qualifying letters to be inserted in these four columns,—G., good; F., fair; M., moderate; I., indifferent; B., bad. Rewards and promotions might also attach to these marks, to be systematized at the discretion of the managers. In addition to its obvious use in dealing with the children, such records keep the teachers on the *qui vive*, and alive to the necessity of of incessant watchfulness. Besides the periodical entries, all special occasions for praise or blame should be noted. Each individual might be furnished with a small book, containing a transcript of entries about himself, taken from the general register. Too little is thought of these landmarks of the reformatory

work done in reformatories.* Where such oversight exists, it results greatly from the original mistake, that juvenile offenders are errant angels, whom we have but to rescue from their associates, the gaol, and the cruel neglect of society, in order at once to reclaim by tenderness and seclusion. Mr. Bengough soon knew better; but few like him went personally into the work, and dealt day by day with its rugged difficulties. It also befel the cause, that some of its ardent advocates were cruelly deceived and hoodwinked by men as managers on whom they had put boundless affiance. This profound delusion has passed away, but it has left an unduly light estimate of the depravity and cunning with which reformatists have to grapple, and of the pressing need of every appliance that can aid them in the toilsome task of reformation. It is worthy of remark how greatly such a system of full and faithful registering would facilitate efforts to get children into service at the termination of their stay in the reformatories. Sir Stafford Northcote has already adopted it, and, moreover, when a lad is ready to leave him, he furnishes a brief abstract of his character and qualifications in such a printed form as this:—

"PARTICULARS respecting ——.

"*Age.*—Sixteen years and three quarters.

"*Parent's Name and Residence.*—Phœbe Wilkins, at Mrs. Morgan's, Nunny Lane, Frome, Somerset.

"*Has been in the School since*—May 1st, 1855.

"*Previous Employment.*—Gig boy in a woollen cloth factory.

"*Height, Weight, and General Description.*—5 feet. 120 lbs. Stout, well-built, able and willing to work hard.

"*Conduct in School.*—Very good, almost from the first.

"*State of Education.*—Can read, write, and work the first four rules of arithmetic. Religious knowledge fair.

"*Disposition.*—Firm, careful, and attentive to orders or instructions from superiors.

"*For what kind of Employment suited.*—Garden work, but quite equal to any out or in-door employment.

"*Remarks.*—This boy was a very neglected and miserable lad, ignorant as a heathen, and broke the laws without knowing that God saw him. He is now apparently a sincere and earnest inquirer after truth, and is considered quite trustworthy. Many of the Directors of the Devon and Exeter Reformatory feel much interest in him.

"N.B.—This boy is still an inmate of the reformatory; his time of detention expires on the 30th of April 1857, but, should employment be found for him, permission for his discharge will immediately be sought from the Secretary of State."

Such statements are accompanied by a note, requesting to know if any employers of labor in the neighbourhood are likely to desire the service of such boys as are mentioned.

§ 22.—DIFFICULTY OF TESTING REFORMATION AT PRESENT.

This difficulty will always be considerable. One of the great characteristics of criminal children is precocious deceit. They have been usually trained in guile, and all kinds of false appearances. Nothing is more natural than that they should

* They are essential also as guides and information to the Inspectors.

act penitence: and this inevitable tendency is sometimes far too much encouraged by the tone held towards them by managers and teachers. The key-note is easily adopted. I place little reliance on the statistics of reformation. So far from taking 70, 75, or 80 per cent. as the real proportion of reclaimed criminal children, and unfairly measuring the efficiency of other less boasting shools thereby, I hope there is reasonable ground for believing that one-half the whole number of inmates are,--not *really* contrite and permanently reclaimed,—but, so far practically convinced that honesty is their best policy, that they really will strive to be honest, and earn their own livelihood. If any school managers can conscientiously say that they are effecting this, they may take great joy and credit to themselves for as much success as any one really acquainted with the nature of juvenile crime can or will expect from them. And even this cannot be often done under three or four years careful training, with at least the principal appliances I have named. The present means managers have of testing the accounts they get of the good conduct of those children who have left them are extremely defective, even when the accounts they receive are conscientiously made. Many of such accounts come from the children themselves, and cannot be implicitly relied on.

§ 23.—Rewards and Punishments.

The system of rewards and punishments fittest for reformatories has been the subject of much discussion. I speak solely here of rewards and punishments for conduct at the reformatory. I am a decided advocate for the mark system. I would give practical effect to the entries in the conduct-book. There are various ways of doing this. I prefer attaching a money value to good marks, because apart from its other advantages as a stimulus to good conduct, it affords at the same time an excellent mode of punishing bad conduct by the simple process of fines; or, in other words, deductions from the money gained by good conduct. When the former had prevailed so far over the latter as to leave nothing on the credit side, I should at once inflict corporal punishment, which should be of three grades. First, bread and water diet; secondly, the cell; thirdly, flogging, in extreme cases only.

It is absurd to say that this is buying and bribing good behaviour. What are all rewards but this in effect? The money is the means of obtaining in nine cases out of ten the very reward which the objector would give in kind. It has, however, this great advantage, namely, that it may and often

will encourage in the receiver a love of saving, which no presents, whether they be books, puddings, or jaunts, can effect.

Supposing that three marks were weekly attached to "good," two to "fair," and one to "moderate," two *negative* marks to "indifferent" and three to "bad," here would be at once a working plan. Supposing the four classes of conduct were adopted which I suggested before, the maximum marks, positive or negative, which any inmate could have in one week would be twelve, and it would be for each school committee to assign such money to marks as in their discretion was practicable and expedient. It would then remain for them also to organize the means of enabling the children to spend their little earnings in the most beneficial and innocent manner consistent with their tastes; for it would be no reward if their tastes were not consulted.

Punishments are, as is well said by Mons. Demetz, "essential to a system of discipline." This admirable reformatist, in his report of 1855, thus speaks, after fifteen years experience, of the good effects of cellular confinement :—

"Without having been an eye-witness of its effects one cannot form a correct idea of the happy influence which it can produce in the moral character. A complete change is wrought in the individual subjected to it. As he finds there neither allurement or distraction, there is nothing to make him lose sight of the exhortations and advice which he receives. Reflection brings continually before his eyes the picture of his past life. In solitude pride and self-conceit are no more. The boy is obliged to turn in upon himself, and he is no longer ashamed to give way to the suggestions of his conscience, which has been rightly called the voice of God. By degrees he becomes accessible to religious feelings. Labour becomes first an occupation, then a pleasure; he applies himself to it with eagerness, and that which he had before considered as a painful task becomes a relief, and so necessary that the greatest punishment that can be inflicted on him is to deprive him of all employment."

I look myself upon reformatories without cells as being without at least one essential means of reforming. Mr. Wheatley, who read a very able paper on this subject at Bristol, supports this view, and he goes beyond it, for he would have a cellar as a further punishment, believing that,—

"To subdue insubordination, there must always be a possible means beyond that actually used. The offender must not know the limit of your power, otherwise the boy of strong will and nerve will often screw his courage up to endure beyond that limit, in the hope of obtaining a triumph."

And he also—

"Inclines to the old-fashioned idea, that in the cases of acute moral disease, the outbreaks of uncontrolled passion and wilful disobedience to which ordinary children are so liable, a counter irritation judiciously applied may often be useful to draw down, as the old herbalist would say, the bad humours from the nobler parts. But I believe its usefulness is limited to cases in which the general tone of the moral constitution is healthy. I have little faith in its efficacy in the chronic diseases, with which we have for the most part to deal in our reformatories."

I also agree with Mr. Wheatley in the following remarks :—

"Considered, therefore, merely as a deterrent, I believe that corporal punishment is less effective than the cell, because its limit is so soon reached and so plainly visible. The cell is more really formidable, because though less severe, its mild discipline can be continued almost indefinitely.

"Considered as a correction, it can be adjusted, with a nicety which corporal punishment does not admit of, to the requirements of the case, and under proper arrangements prolonged from simple temporary preventive detention to long continued isolation as the moral symptoms of the patient, developed from time to time, may seem to require.

"In both points of view, both as a corrective and as a deterrent, the plan adopted at Mettray is most important, viz., that the period of detention in the cell should never be fixed beforehand, but should be regulated according to the effect apparent during its continuance.

"For these reasons, though I would not have corporal punishment absolutely excluded from the reformatory, because, in the infinite variety of cases and characters, it may occasionally be useful and even necessary, yet I do strongly believe that it should be used rarely and with the utmost caution."

At Parkhurst and other reformatories, I examined from thirty to forty boys on this very subject, without witnesses, encouraging each to speak out freely; and, with two exceptions, they all told me that they feared and felt a short separate confinement far more than flogging, unless it were very severe; and that, if it were severe, it hardened them, and made them hate their masters. Some added that the cell confinement was "not so bad," if they could get anything to occupy themselves with, even such as a bit of stick or string.

I believe this to have been a perfectly truthful account, and I beg leave here to call attention to the necessity of having the cells properly constructed, both as to warmth, ventilation, and gradations from light to darkness. They ought always to be furnished with a bell, in case of illness, like prison cells. By far the best I have seen are those in the convent at Arno's Court, near Bristol, where, indeed, every arrangement, including dormitories, laundry, &c., are of the first order, and entirely free from the makeshifts which limited funds have so injuriously necessitated in more instances than one.

§ 24.—Larger Funds essentially needed.

I must take this occasion of expressing emphatically how much mischief has been done, and is still being done, by starving the physical conditions of success. This applies quite as much to staff as to building. I do not know any branch of public expenditure in which excessive economy is likely to be more vitally injurious to the best interests of society, or in which a little liberality would be productive of more essential good.

In your Lordships' letter to Her Majesty's Inspectors of Workhouse Schools, of the 21st of November 1856, we are informed, that, your Lordships had "ruled that no grants should be made for building reformatories, as the experimental state of the whole subject of preventive and reformatory discipline afforded a sufficient reason for not sinking large sums of public money at once in undertakings which might have to be abandoned."

Admitting the prudence and wisdom of this decision when it was made in June last, I humbly submit that there is ground for believing that the results of the experiment are rapidly vindicating the claims of the experimentalists to more substantial aid; and that such aid cannot be better applied than in building-grants, under similar restrictions and provisions to those imposed on the promoters of common schools. The time is come when the full fruits of the experiment are contingent on such grants, which I venture to think may now justly be regarded rather as a means than as a sequel to success.

I am well aware of the absolute necessity of restricting the grants of public money, under the Minute of June 1856, with the utmost care to the real objects of that and of any subsequent measures which flow from fresh legislation in the next Parliament.

There is a constant desire on the part of parents, who can well afford to pay for schooling, to evade such payment by pleas of poverty, and so obtain admission gratis for their children into ragged schools. It requires great caution on the part of the master to keep them out. If Sir Stafford Northcote's Bill becomes law, it will require equal caution on the part of the magistrates in conducting the "due inquiry," under the 5th section, into the circumstances of each case before they enable parents to rid themselves of all their responsibilities, even at a cost which some will gladly compound for at 3*s.* weekly. Such danger applies, however, in no degree to reformatories certified as such under the 17th & 18th Vict., c. 86.; and it seems, that with proper provisions as to site and building, and subsequent inspection, there can be no reasonable apprehension that the public money would be used either improperly or improvidently if grants were given for the building of reformatories, though established and conducted by private individuals.

Quocunque modo, I am anxious that the buildings should be greatly improved. I think that such improvement is required by the relative length of time during which each class of children frequents the school and the reformatory; the one being occupied for six or seven hours, merely as a day-room, the other for the whole four-and-twenty, as a dwelling.

I believe it to be of the utmost importance to classify criminal children. They vary immensely in their proneness to corrupt and be corrupted. The power of segregating them into family groups, as at Mettray and Redhill, is one main cause of the superior success of those establishments. Wherever badly-disposed or vicious children herd together, the tendency is downward to the standard of the worst; not up-

ward, to that of the best. It is a perilous thing to bring criminals into close and hourly contact. This peril is alone to be counteracted by judicious grouping and careful watching. But this essential segregation is impossible without buildings arranged for the purpose, and such buildings are beyond the power of private purses.

These, my Lords, are the reasons why I respectfully urge the necessity of building-grants on plans approved by your Lordships.

§ 25.—School Instruction.

I regard this as the least important of all the elements of reformation. In the first place, no very high amount of instruction is possible consistently with the time and exhaustion demanded by the other requirements of the work. Now a slight amount of instruction, though by no means a cause of crime, is usually its concomitant. This is a fact put beyond question by the returns of the amount of instruction possessed by prisoners throughout the kingdom during many years, as they appeared by the "Tables of Criminal Offenders," published yearly by the Home Office, and by which it was shown that only one third of the whole number were entirely uneducated. Similar evidence is obtainable from almost any reformatory which has tested the amount of instruction possessed by those who enter it. The managers, for example, of the "Akbar," report that, out of 77, 25 only were unable to read when first admitted; so that two-thirds of these convicted boys had been at school, or had otherwise obtained some amount of education. Thirty-one, moreover, out of the 77, could write, being not far from the proportion that were returned by the Census Commissioners of 1851 as *learning* to write in the *entire* schools, including the high ones, in the whole kingdom,—namely, 61½ per cent. The same number (31 out of 77) in the "Akbar" could cipher more or less; whereas in all the schools, according to the Census Returns, 56½ per cent. of all boys learn arithmetic. At Hardwicke, the great majority have been at schools; and some are well instructed. At Red Lodge, Bristol, though Miss Carpenter reports on the gross ignorance of the girls when they first come in, she adds the startling fact that "there is scarcely any child who does not profess to have been at a school." When it is taken into account that of the host of criminals, whether young or old, the greatest amount of education is among those who escape detection by their superior sagacity, it follows, that the educated proportion of the whole body is likely to be much larger than the propor-

tion of those who become, through conviction, the inmates of reformatories. In fact, when the heart is depraved, and the tendencies of the child or the man are unusually vicious, there can be little doubt that instruction *per se*, so far from preventing crime, is accessory to it. Higher secular instruction I am disposed to regard rather as a reward of good conduct than as a means to it, and to place this boon before the children wholly in the light of a privilege. The kind of instruction alone, in my humble judgment, suitable to reformatories is that which may fit the scholars for success in honest industry; and I would limit it to the subjects, and mode of teaching them, upon which, in order to promote plain practical education in Poor Law schools, I lately addressed a circular letter to the teachers of those schools in my district; and which I have annexed to my annual report on them. (*See post.*) There may not be time to teach even this very limited amount of knowledge. The great desideratum is to get the minds of the children exercised, and their thoughts directed in the right channels, diffusing the instruction given equitably among the whole of the scholars. I am always better satisfied where only one thing is taught thoroughly, than half-a-dozen indifferently. The mental discipline and its great benefits essential to any one subject well learnt, have then been secured. This a valuable achievement. There is little fear that after a time education will be adequately given in nearly every reformatory. Criminal children are among the most ready-witted of any class, and learn both readily and rapidly. They are equally alive to the benefit of it, and the teacher must, indeed, be stolid or perverse who fails in accomplishing what is required of him. The all-important part of education, properly so called, in a reformatory is that of religious and moral training, with so much scriptural instruction as is essential to its taking root in the heart. As I have before said, it is impossible to prescribe set rules for a work so purely æsthetical, and of which the success will so mainly depend on the model set before the learner, together with the hourly concomitants of the little world in which he is living. Of small avail are creed and catechism to him, if bad counsel, low converse, and disorderly habits infect his daily life, corrupt his heart, and limit his merits to the necessities of his position. First and foremost the child must be taught to respect virtue by its practice, which will lead him by degrees to love it for its own sake. The instruction he receives, and the discipline to which he is subjected, should not only be adapted to his benefit, but proved to him practically to be so. The government of the institution should be such as to *enforce* habits of

order, industry, regularity, temper, cleanliness, chastity, and obedience on *all* who live in it, whether they be teachers or learners. There should be no alternative of living there in any other manner. The inmates should be *in a system of good* too strong for their *several specialties of evil*, and be carried along with it, not by preaching or precept alone, but by the force of inevitable habit. I am aware that we are far from having realized all this yet. Some time must elapse before it is even possible to perfect one-half of that which moderate experience suggests as necessary. Much towards it, however has been done. The power of good which lies at the bottom of the movement and inspires hearty zeal in the cause, has already surmounted great difficulties, detected and removed formidable delusions, and having rid itself of still more perilous confidence, is beginning to measure the difficulties of the work, and to gird itself with strength and seek appliances fitted to encounter them.

It has seemed to me under these circumstances to be a safer as well as a kinder course to abstain, in this my first report, from the mention of special defects in the reformatories under my inspection, confining myself, with the official reports of my visits, to this public expression of general views which I have now the honor to lay before your Lordships.

I have the honor to be, &c.

JELINGER C. SYMONS.

To the Right Honorable
The Lords of the Committee of Council on Education.

APPENDIX A.

EXTRACT FROM MR. BENGOUGH'S "EXPERIENCE IN REFORMATORY SCHOOLS."

(*Inserted in Irish Quarterly Review, September* 1856.)

Commencing with an exaggerated idea of the power of kindness to do alone what is only to be brought about by firmness in requiring obedience and maintaining respect, I committed, at starting, the great error of treating my boys *not* with too much kindness, but with too little strictness and regularity of discipline. In seeking to win their confidence I encouraged them to be so unreserved as often to overstep the barrier of due respect, and both these errors have been subsequently the cause of much otherwise needless trouble. Not that I altogether regret this, however, or would advocate any approach to the other as the less dangerous extreme. On the contrary, I owe to them, to the latter at least, a more thorough insight into the boys' character than I should have been otherwise able to obtain. I cannot again tax myself with giving any undue indulgence in the way of personal comforts, at least at starting. Where my mistake in the way of kindness lay, was in the endeavour to *win* them to *like* work in school or in the field, in making it too little of a decided duty to be decidedly and energetically fulfilled, and in trusting too sanguinely to the effects of a mere verbal rebuke where a decisive and sufficient if a mild punishment should have been inflicted at once as inevitable. I allowed myself to think, too, that it was needless to exact such observance of order and discipline, when I had only three or four boys to deal with as I felt would be necessary when there were more, and this caused

me many a difficulty which I should have otherwise completely avoided. For I always found that any change in the system once acted on was productive of much more dissatisfaction and disturbance than would have existed under a far stricter system advisedly adopted and steadily acted up to from the first. One of the first things, therefore, which I say when my advice is asked on the plan of commencing such an institution as ours is, that, however few the number of boys at first received, the system and rules should be as strict, if not stricter, than those which it is contemplated with a full school to adopt. . . . .

To render such a system as this efficient demands great faith in its eventual success, and consequent perseverance in it on the part of the officers and on the part of the boys, depends on that which is not the growth of a day, or even of a few weeks, a satisfactory moral tone generally in the school. In setting it in operation at first it will have usually to be backed up by a ready appeal to more sensible modes of correction where its influence is not sufficient, but always with a return to it, and a trial of it again and again, until, as it eventually will, it succeeds. The fines too must be made sufficiently heavy to entail, as a tolerably near prospect, a curtailment of food or other indulgence. By a somewhat extraordinary application of this their consequence in one case, I made their influence more appreciated at the Hardwicke School. I had occasion to give a mark to one of the boys there, an impassible, idle, easy tempered simpleton, when he derisively asked for 100. I accordingly took him at his word, and the 100 marks gave him bread and water three days in the week for a period of six weeks. It put a stop to such remarks for the future. Of course, however, cases, occurred in which punishment by fine was inadequate. On two occasions we had recourse to the ultima ratio of a public flogging, inflicted either by, or in the presence of Mr. Baker and myself, and with all the solemnity of form and circumstance with which we could invest it. I have once before publicly recorded my conviction that inflicted in this way it is calculated to exert a sound moral influence on the sufferer and the other boys. The offences in these two instances were a fifth attempt to abscond, and offering personal violence to the schoolmaster in the school. For other bad, though less serious offences, we resorted to confinement in a light cell, occasionally, but *very* rarely, extending to as much as three or four days, (and then usually, principally for safe custody, when a boy had attempted to abscond,) for twenty-four hours is ordinarily found sufficient to reduce the most refractory to order. . . . .

Appendix B.

LETTER FROM MISS CARPENTER.

Dear Sir, *Bristol, 3 February* 1857.

Your letter has led me to analyze my views, and here are the results as clearly as I can at present give them:—

First. It is a fundamental principle that childhood is a condition absolutely distinct from manhood, and so recognized by the natural law (*i.e.* the law of God), the old Saxon law, and the common law of England. (*Vide* "Reformatory Schools," pp. 286–290, and "Juvenile Delinquency," pp. 371–377.)

Secondly. By all these laws, as well as by the common usage of society, the parent has a full *right over* the child, and consequent responsibility for him, unless this right is forfeited by his own unworthiness or inability to discharge the duty he owes to society in general, and to the child in particular, in which case the child becomes a nuisance or burden to society. The law respecting such forfeiture of parental rights was recently laid down very clearly by Lord Campbell in a case brought before him. The responsibility of parents for the good conduct of their children is continually acknowledged by magistrates, who are authorized by law to hand over young offenders brought before them to the care of their parents, and do so whenever they think the parent *can* control him.

Thirdly. The parental authority having been forfeited, the State acts *in loco parentis*, and acts as such by sending the child to a school where he will receive that training which his parents cannot give. (*Vide* M. C.'s Papers in the Report of the Nat. Ref. Union Meeting.)

Fourthly. In order to withdraw from the parent his rights and vest them in another quarter, legal sanction is needed; hence it is necessary that the child who has so injured society as to require his being withdrawn from the parent, should be taken before the magistrate and legally sentenced. *Volunteer* cases are of course not here referred to, but experience has shown me that unless a parent is actuated by really good motives in placing his child in a reformatory, he is likely to interfere with the

reformation of his child. Even if the child is an orphan, he is more in the true and *natural condition* of childhood by being placed in a reformatory under legal detention than if going there of his own free will.

Fifthly. A child *must* act "sans discerne nent," *i. e.* without a bad knowledge of the nature and real consequences of actions, in consequence of the immature state of his physical, mental, and moral powers (*vide* Evidence before H. C., 1852, and Juv. Del. 293–298, and Appendix), hence he cannot act with a "malus animus" in *the same sense* that an adult can; his crimes (legally speaking) ar generally the direct effect of his having been placed in circumstances over which he had no control, and from which he *could not* extricate himself. Of course, he understands perfectly that a certain course of conduct is contrary to the law of the land, and that certain consequences will follow *detection;* but I have never yet met with a child who felt the slightest *remorse* for the *crime* itself, or indeed for any misdoing, until after a long period of reformatory training. The fearful passions and dense ignorance which have been engendered and fostered by evil around have obscured everything else. How can they discern right from wrong when intense maternal love is mingled with poison,—where obedience to the first commandment with promise becomes a sin?

Sixthly. Hence penal jurisprudence would *not* be interfered with, if the child as such were sentenced to the reformatory and sent there *straight without imprisonment;* this I believe. In the present immature state of reformatories I should not recommend an immediate alteration of the law as regards previous imprisonment; yet, *Seventhly*, since the Act includes, under the denomination "child," young persons quite able to understand *something* of their true position in society, and who have shown a very precocious development in crime, I would at present leave the matter to the discretion of the magistrates and judges, who must be supposed to have examined the case, only *limiting* the time *absolutely* to fourteen days, which should be the *maximum*, not the *minimum*.

I will add a few practical remarks, founded on my own personal experience:—

Vide No. 2.—Of thirty-eight children received during 1856 into Red Lodge, only two were cases of complete orphanage, and in these there were relations who were *willing* to take care of the child but *could not*. In most of the cases the girls' delinquency was *directly* traceable to the misconduct of one parent, or both. The same is my experience of boys.

No. 4.—I had three cases of the withdrawal of girls by parents during 1856, the cases being voluntary ones. In one, the father removed her contrary to *her* and my earnest entreaties, to a home where each of his other daughters had fallen into a life of crime; this one had been in prison four or five times; there was every reason to believe that he acted under the *influence of another*. In the second case the mother removed her evidently to make her useful in crime; this girl was sentenced to Red Lodge for five years within two months after she left. In the third, the girl was extremely troublesome, and had not been long enough to have much good done her; the mother removed her through shame, lest it should be known where she was, and placed her in a higher school.

No. 5.—I have scarcely ever found the subsequent conduct of a child tally with the previous report given of him or her. Many whom I have been almost afraid of taking from the character given have shown themselves, under changed circumstances and influences, most innocent and anxious to do right. Theft is a rare and scouted fault at the Red Lodge; lying and insubordination, or rather making *self* rather than duty the guide, are the great difficulties we have to contend with.

No. 6.—This is evidently the general feeling among all who come into a *practical* knowledge of the subject. That this is the *general* feeling is shown by the fact that, though the law seizes equally rich and poor among *adults*, I have never yet heard of a case in which a *child* of the middle and higher ranks of society has been brought before a magistrate, though far worse thefts are continually committed in boarding schools than *poor* children are sent to prison for; I have heard of a noble lord being expelled from a public school for repeated thefts. A strong sense of the anomaly existing between a child and a gaol is evidenced in gaol officials by the fact of the great kindness with which children are treated. To many of my girls the gaol is the first place where they have received the kindness, and it is remembered with gratitude. "The governor was like a father to me," said a little fatherless girl. "I saw the governor of the place I came from (*gaol* is a word not mentioned among us), when he brought the new girl," whispered a child to me last night, "and I gave him some book-markers, and he told me the next time he came he would bring me a little workbox." A visit from a former chaplain or matron is a source of great delight, and they usually carry away some little offering of gratitude. The sternness of gaol discipline is insensibly but but most naturally mitigated in their case. Our governor actually told me that, considering a sentence of "one calendar month's imprisonment, with hard labour," a sentence passed simply to obtain for the child admission to the school, he had not attempted any penal severity, but had allowed the child to spend the month, within

prison walls indeed, but, in daily association with his own children." The *man* conquered the gaoler, and the father's heart taught him what childhood was. Indeed I have never met with more sympathy in my work than from gaol officials and police officers.

No. 7.—There is palpable *injustice* as well as inconsistency in subjecting a child of tender years to the *iron* grasp of the law, and I believe that such incarceration is both physically and morally *injurious*. All who know what childhood is feel their very natures rebel against subjecting, for even fourteen days, a little child of eight years old, or even twelve, to a treatment, one hour of which would quite subdue most young creatures, and which must either crush or harden them. I *have seen* both effects. Yet, when there has been a *great experience* in crime, and a *long course of rebellious daring*, I believe that a *short* preparatory imprisonment does good by showing the necessity of obedience to law, softening the spirit, and preparing the child to receive with more thankfulness the contrasted condition of the school. As thus there are at present in the kingdom a large number of them, I would leave the law as suggestsd in No. 7. But I think fourteen days should be the very utmost time allowed; indeed I should say seven days, which would generally subdue the most refractory, if administered with that combination of *strict discipline* and *free kindness* which I am happy to believe are now common in our gaols. But I cannot speak too strongly of the worse than useless effect of long imprisonments on young persons. I have watched it closely and could fill many sheets with proofs.

This is a brief sketch of my views; I hope I may have conveyed them clearly to you, but, if not, I shall be happy to give any further explanation, and remain, &c.

Jelinger C. Symons, Esq.
H.M. Inspector of Schools.

(Signed) Mary Carpenter.

Liverpool is the only place where the law has been tried at all fairly. There all young persons convicted of theft are remanded for seven days; strict inquiries are made respecting their parentage, and the chance of their being properly taken care of. If there is a chance, they have a further trial, but on a second conviction are sentenced for five years generally to a reformatory; if there appear no likelihood of their doing well, they are sentenced at once on a first offence. The knowledge that they will have to pay, if the child is sent to a reformatory, has had a sensible effect in Liverpool in leading careless parents to watch over their children.

Appendix C.

Although it may be hopeless at present to attempt the general adoption of reformatories in juxtaposition with a penal department, so as to get rid of the gaol, I am inclined to think it not improbable that the Government may hereafter think fit to organize such an establishment as an experiment, either at Dartmoor or some other site where means of profitable labour abound. I, therefore, venture to submit the following:—

Outline of a Scheme for a Penal Reformatory for 300 Boys.

This scheme is based on the assumption, that a distinctive discipline should be adopted for children freshly convicted of crime, and those fit for the appliances of the reformatory. The first stage may be more less correctional, according to the antecedents of each offender.

Such punishments may consist of—

1. More or less confinement; either, in the worst cases, in solitary cells or collectively where silence is enforced, in subsequent modifications of treatment, accompanied by school instruction, or otherwise, as the case may require.
2. Coarse diet.
3. Hard labour of a less agreeable and more onerous kind than that imposed in the latter part of the stage.
4. Of a party-coloured prison dress, to prevent escapes.
5. In all cases it is desirable that the period of school hours should be greatly longer in the first than in the second stage.
6. In case of ill-deserving or relapse after passing into the second stage, the return of the offender into the first, with such severities as his case may require, will afford an excellent means of correcting such faults.

The probabilities are, that in the larger and more criminal counties of England, 350 boys may, with advantage, be always under the roof of a reformatory, in one or

other of its stages. This, however, must depend so entirely on the vigilance of the police, on the efficiency of the reformatory, and on the favourable estimation in which the committing magistrates, as well as chairmen of quarter sessions, may hold it, that it is very difficult, even for those well acquainted with the amount of juvenile crime in a county, to foretell the precise number of offenders who would be sent to such an institution.

The following would, probably, form the bases of the discipline in the first part of the penal or correctional stage:—

School instruction of the simplest and most thoroughly-practical kind, in which religious and scriptural knowledge should predominate, under the immediate direction and continual guidance of a clergyman of the Established church peculiarly fitted for the work. It may be here remarked, that nearly the whole success of the institution would probably be determined by the degree in which the influence of the chaplain leavens the whole community, chastening correction, diffusing sympathy, imparting vital Christianity, inspiring hope, furthering repentance, securing confidence, encouraging improvement, and giving permanence to reformation. Vain are the best physical expedients and intellectual training, unless accompanied by these far more powerful moral agencies.

The next essential requisite is hard labour. In the first stage I recommend, that it should consist of the roughest out-door work (including brick-making, where there is clay), and that the boys should be grouped in gangs, classified according to the degree of correction, which may conveniently be there divided into three ranks. Out-door labour affords ample means for this diversity of toil; better, in fact, than any other. For hardened offenders, and those of more advanced age, it may be expedient, that at their first advent, they be entirely confined to the school and their cells, as at that excellent establishment Parkhurst, which should be not only visited, but studied by every founder of a reformatory. It affords an admirable model, not only of effective industrial discipline, but of the good results in order, neatness, obedience, and regularity obtained by the military element introduced there and at Mettray, and so justly lauded by M. de Metz, in his speech at Bristol.

I also recommend either the tread-wheel or some other muscular and irksome employment for wet weather. It might be made to grind the wheat used in the establishment, so as to give an object and use to the labour.

In the latter part of the penal stage, I think the education should now be reduced to three hours daily; but one hour and a half may very advantageously be allowed in the evening for the voluntary pursuit of the subjects chosen by the boys, for reading and for writing to friends; a portion of the time might be also devoted to reading aloud (occasionally from the news of the day), at the discretion of the governor or chaplain, one of whom should always be present. I attach great weight to this period of mental recreation, which, with prayers and hymn, should close the day. It should be in the school-room, perfect silence by the boys being enforced here as elsewhere. The teachers, as a labour of love, might give much conversational instruction, and it would be a fruitful time for the quiet influences of the chaplain. It would (except for grave offences) suffice for general punishments, to prohibit attendance at this evening gathering. At Parkhurst it is a class privilege. I would rather see it an integral branch of the system, from which exclusion was the exception. It admits of rewards, however, such as the loan of interesting books of travels, seafaring tales, &c., the popular serials, such as Household Words, Cassell's and Chambers' works, &c., and perhaps of chess and drafts, and lectures occasionally. Sometimes, also, the evening's work might be enlivened by music and singing exercises.

Hard labour should occupy the bulk of the day, It should consist chiefly of spade husbandry, brick making, road making and mending, and cattle tending: but it will be desirable, on all accounts, in the reformatory department, to have carpenters', bakers', blacksmiths', tailors, and shoemakers' shops. One or two lads in each may be systematically educated in these handicrafts, and instruct others; but it is questionable whether it is not very advisable to give some aptitude in each of these industries to all the inmates. Many will emigrate, and if not the knowledge how to patch a shoe or a coat is always useful. These crafts need not be all adopted at once, but grow with the experience, means, and requirements of the establishment. In the first period it will be well to adapt the labour to the largest production, so as to lighten the cost of maintenance to the uttermost, consistently with the great objects in view.

There is generally more difficulty in supplying in-door than out-door occupation, and therefore I venture to suggest flax as a crop, with a view to flax dressing and spinning. But I would especially beg to direct attention to the adaptations of *printing* in each of its branches to child labour, by means of the improvements patented by Major Beniowsky, and recently purchased by Mr. Green, who is about to start a company for their practical operation on a large scale. By this

process young children can compose types with rapidity, and at a very greatly less cost than by the ordinary means, and the press work would be equally adapted to the occupation of the elder boys.

If the county printing were thus executed, and there is no practical difficulty whatever in the way, a very obvious means to that extent would be afforded of supporting the establishment.

A complete isolation of the two classes is essential to the system, and must be provided for in the arrangement of the buildings. Separate cells should be built on the most improved principle for the entire occupancy of the worst class of inmates on their entrance. The others would occupy the day-room and the school-room, and at night partitioned dormitories. The separate cells would be well ventilated, and sufficiently lighted by ventilators and small windows high up in the external wall.

I should suggest the system of sub-division, as far as practicable, in each department; the degrees of viciousness are so strongly demarcated, that I cannot too earnestly recommend a severance into three or four divisions, each under the special superintendence of a master. For more easily effecting this, four day or school rooms, convertible to either purpose, and which, for the sake of economy, may be used for both purposes, as they frequently do in workhouses, are assigned in the plan. But it is still more essential entirely to isolate each individual at night. It is much to be lamented that few English reformatories, save Parkhurst and Kingswood, have yet adopted this obvious preventive of the worst kind of corruption.

Wooden partitions, reaching at least to six feet above the floor, will effect the purpose where a superintendent sleeps in the room, but not otherwise.

I would *test* as well as encourage and strengthen reformation by making the second stage of treatment one of quite as much freedom to the development of character and individual conduct as the advanced stages of Mettray, or even as Redhill. I think, therefore, that they should live and herd together (under watchful eyes) in the second stage, and where meals, instruction, labour, and recreation by day should be social and gregarious, and assimilated to the future incidents and daily habits of life.

For large establishments, I assume that buildings would be expressly erected for the purpose, and that counties would elect to purchase (not to rent) the land.

It is neither our policy or purpose to raise criminal children, either in mental cultivation or bodily comfort, above the rank of the independent poor. I therefore adhere to stone floors and whitewashed walls, with a studious avoidance of all architectural ornament. Ventilation, drainage, and all that affects health are to be scrupulously observed. No economy justifies their neglect.

The site chosen should be in a healthy situation in the country, and not too near a large town.

I have now sufficiently sketched the system I suggest, to introduce its expenses, in dealing with which I must confine my estimate strictly to such as will be *extra* expenses caused entirely by the new establishment in addition to those incurred already in the gaols. These I divide into two distinct heads. *First*, Those which will cease in twenty years, being defrayed with money borrowed and repaid puring that period. *Secondly*, Those which will be *permanent* extra expenses. Here are the schedules of each, which I will presently explain in detail:—

SCHEDULE A.

Expenses of establishing a School for Three Hundred Children.

	£ s. d.	£ s. d.
1. Buildings and fittings	7,000 0 0	
Add as margin	500 0 0	
		7,500 0 0
2. Land, thirty acres, at 60*l.* per acre		1,800 0 0
3. Stock and tools		300 0 0
4. Furniture, extra		390 0 0
5. Two vans, two water-carts, and two horses		106 0 0
		£10,096 0 0

SCHEDULE B.

Permanent Expenses of School for Three Hundred Children.

Salaries.

	£ s. d.
1. Bailiff and matron	150 0 0
2. Schoolmasters and four assistants (part paid by Government grants)	250 0 0
3. Chaplain	250 0 0
4. Clerk, one of the teachers (extra)	20 0 0
5. Surgeon, extra, of the county gaol	30 0 0
Wages.	
6. Porter and assistant gaoler, 15*l.*; five servants at 12*l.* each	75 0 0
7. One farm labourer, at 12*s.* per week	31 4 0
8. Tailor, shoemaker, baker, included in cost of clothes and food.	

	Rations.		
9.	Rations and clothes of children as at present in gaol, or charged on parents.		
10.	Rations of eight officers and six servants	200 0 0	
	Rates.		
11.	Rates exempt by statute.		
	Fuel, &c.		
12.	Fuel and light, extra	100 0 0	
	Repairs.		
13.	Repairs, wear and tear of tools, &c.	50 0 0	
	Insurance, &c.		
14.	Insurance on cattle	15 10 0	
15.	Insurance on house, &c. 7,000*l.*, at 4*s.* 6*d.* per cent.	15 16 0	
16.	Loss on land first year, 300*l.*, interest of	13 10 0	
	Transit, &c.		
17.	Carriage of children, keep of horses, drivers, tolls, &c.	110 0 0	
18.	Extras	50 0 0	
		£1,371 0 0	

1. A builder to whom a plan was submitted, has given me a certificate of the cost, &c., and this very important item is over rather than under stated.

2. The land, tithe free, is put at the highest valuation for average land.

3. The stock will be partly if not principally reared on the farm, as the produce of the land increases. The tools consist chiefly of spades and forks, and this item is therefore overstated. Less would suffice,* 8*l.* per acre is the usual estimate for spade husbandry farms. (*See* Nowell's "Manual of Field Gardening," p. 118.†)

4. Some of the furniture may be clearly supplied by the different gaols which get rid of their children.

5. This item is estimated at much more than the articles would cost, and is intended to cover the price of a third horse, should it be needed.

This whole outlay might be borrowed at 4*l.* 10*s.* per cent. and repaid by annual instalments in twenty years for an average sum of 732*l.* per annum on the average of years, the interest included, which would of course decrease yearly.

Let us now consider the items in Schedule B. which would be a permanent extra charge:—

1. The farm-bailiff would have the entire management of the land, and I think should be a hard-working practical man, who will himself work with the boys; he must, of course, be well skilled in every branch of dairy farming and spade husbandry. Some unions have engaged the services of persons thus qualified, and who realize all the benefits, instructional and pecuniary, which we can desire. The matron must perform similar functions in the household department. The bailiff would be aided by the schoolmasters, as well as by his paid assistants. Upon the matron it is obvious that a great deal of the management of the internal establishment depends, the qualifications for which will of course materially differ from those requisite for the government of a goal, and the office would be best filled by a married female. The general control might reside either in the chaplain, the farm-bailiff, or the head schoolmaster. I prefer the latter.

2. The school-teachers should be all carefully chosen for their various qualifications, and be well paid.

The Minute of 2 June 1856 gives liberal grants; and smaller salaries would suffice. I have, however, estimated *with board and rations* 70*l.* for each head-master, and 30*l.* for each of four assistant-masters.

I would apply the remark I have already made as to the bailiff and matron to every other officer. They should participate, as far as possible, in the work done by the children, who are to be taught by example as well as precept that hard work is honourable and idleness alone degrading. No lady or gentleman is fit for any of these offices, save that of chaplain; and from what I have seen of them, nine-tenths of the fashionable race of schoolmasters are equally unfit for reformatory work.

3, 4, and 5. The chaplain should be paid a higher stipend than for a gaol, as much more of his time is required, if his duties are effectually performed. The clerk will have but little to do; and the surgeon of the nearest gaol will attend in great measure the same children as before.

It is almost self-evident that by means of the combination of working power which a district school affords, an adequate staff of boys for the manufacture of clothes, shoes, and bread for the whole body is available; from which an economy must

* The Committee of Council make grants for this and for other items.

† An excellent work, published by Simpkin and Marshall, price 2*s.*

rest over the present system of a separate supply for the same children, however obtained. It is obvious also, that where so large a stock of commodities is required, the payment of artificers to work at each department is comprised in the present cost. In other words, it is demonstrably cheaper to produce the required stock of food and clothing on the premises by hired head workmen with the aggregate labour of the boys, than to supply the same stock of food and clothes in the way it is now supplied to the same children in gaols. The gain is at least twopence in every half crown, *i. e.* one-fifteenth. Mr. Simons, the Governor of the Gloucester Workhouse, who has had considerable experience in a metropolitan union which sends its children to Norwood, estimates the gain more highly, and gives a calculation in support of his opinion.

But I have not taken credit for the manifest saving in favour of the district school plan, but have balanced the whole cost of food and clothing under the cheap plan of home manufacture in the district school as if it would be equal to the present cost of he same items in the gaols.

This reasoning applies to reformatories more forcibly than to pauper district schools for we have the labour of a far more apt athletic and skilful class in criminal children. Nothing is so bad as hereditary sloth and morbid frames for such purposes, and of such pauperism mainly consists.

A large portion of the entire food would be supplied by the land. I estimate its produce at the prices generally paid by unions for the same provisions under the present system.

12, *et seq.* The number of fires required for the school is overrated, and several would be stoves, and this estimate is made where fuel is dear.

15. It is an essential part of the estimate that the building shall be substantial and durable. The repairs done to such a building are therefore overrated at 50*l.* per annum. By due care in the first instance, no additions will be needed. Nine-tenths of those made arise from want of forethought and care in designing the plans. There is ample margin in my estimate for any such as may be *consistent* with the real wants and homely character of the project. I cannot refrain from expressing a hope that all promoters of reformatories will steadily oppose any such additions as would tend to accustom these children to luxuries or comforts such as they cannot expect to meet with in after-life; but in respect of cleanliness and health, being primary considerations, their position should be on a par with common labourers. I am satisfied that this advice consists with the best interests of the children themselves, as well as of the other classes of society.

16. This includes insurance against "all diseases and accidents, including black leg and pleuro pneumonia," at 2½ per cent. on cows; and on pigs at 5 per cent., according to the published tables of the *Agriculturist Cattle Insurance Company*.

17. This item, if required at all, is clearly over stated.

18. The produce of spade husbandry and the bearing of land (in moderate quantities) under liquid manure are incomparably quicker than under the ordinary process of plough husbandry, but I have nevertheless allowed no less than 300*l.* for short produce during the early occupation of the land, and have calculated the interest of it as on sunk capital, uncompensated by produce.

19. A slight calculation will show that this estimate is sufficient, the horses and vans being already provided, and included in the original outlay. The total amount of transit, to and fro, in several union workhouses in Gloucestershire, is 1,068 per annum upon the number of 476 children. This is, however, above the average. Nor is this all. It is swollen by the class of children who would not be removed at all, namely, those who come in but for a few days. Taking these facts into account, and also having regard to the experience elsewhere, I calculate that two-thirds of the total number will be removed during the year, in and out. It is fair to assume that, on the average, at least two children will be removed together (frequently four or five). This gives 100 journeys without deducting the times when the van will carry the children both to and fro. Each of these journeys, I reckon will, on the average, be less than 25 miles out and in. It is, therefore, obvious that two horses are more than enough to perform the work; the tolls would probably amount to 15*l.*, and the driver would be well paid with 2*s.* per journey, or 35*l.* 12s. per annum. The keep of the horses, even supposing them to do no other work, and the wear and tear of vans, would be well defrayed at a farm for the remaining balance of the 110*l.* But the horses would be useful at home for the liquid manure carts, and the carting of roots, &c., so that this item would partly go towards farm produce, and is demonstrably overrated.

20. I think I have now shown cause to believe that my estimate is an ample one, and that in most items the expenses are overrated.

Nevertheless to meet every possible doubt, I add a margin for extras of 50*l.* per annum, which will amply cover keeping up of horses, wear and tear of vans, &c.

It results that we have a temporary extra outlay of 732*l.* a year, and a permanent one of 1,371*l.* per annum.

How are these to be met?

According to the ample expenses of several Poor Law Unions,* from 15*l.* to 20*l.* may easily be made as the net produce per acre of good land, where there is ample labour gratuitously, and stock are judiciously kept. Thus thirty acres at 15*l.* relieves us of 450*l.*, reducing the gross annual cost to 1,550*l.* per annum in round figures, or 5*s.* 3*d.* per head on 300 children, above their food and clothing in gaol, which costs from 10*l.* to 12*l.*, and would certainly not exceed 10*l.* in a well-managed reformatory, where the total cost of a boy would, therefore, be about 15*l.* per annum. No great sum per head for the government or a whole county to provide!

The system here recommended is, it will be observed, one which may be made entirely to supersede the gaol. No child under it need ever enter its doors. It would provide for him *from the moment of his committal to the hour of his return to freedom.* I dread the contamination of the prison, and the brand it affixes upon the future life of the penitent and reclaimed child. It is at best an indefeasible injustice scantily palliated by the plea of necessary punishment, and certainly to be defended on no principle of sound economy, for the reformation of lads who, if allowed to go at large, would plunder far more, and many of whom would in the end cost the country quadruple the money. Nay, the expense of four confirmed criminals in their career from their first theft to their death has frequently cost a larger sum than the whole annual sum for 300 children. If we take also into account the amount of money lost by property stolen it would in all probability be shown that to expend *double* 1,550*l.* per annum in a populous district for an efficient reformatory would be a saving to the country.

Appendix D.

TIME TABLES AND DIETARIES.

TIME TABLE.—DEVON AND EXETER REFORMATORY.

A. M.		P. M.	
6.0 — 6.30	Rising.	12.45—2.0	Dinner.
6.30— 7.0	Prayer and Scripture.	2.0 —4.30	Work in winter. School in summer.

DIETARY AT KINGSWOOD REFORMATORY.

Sunday.

Above sixteen	5	ounces boiled beef.
	9	,, bread.
	8	,, pudding.
Fourteen and under sixteen	4	,, beef.
	8	,, pudding.
	8	,, bread.
Under fourteen	3	,, beef.
	6	,, bread.
	6	,, pudding.

Monday.

1-pint pea soup. Made in the proportion of about three ounces of meat to each boy. The liquor and bones from the boiled beef of preceding day used. Bread same as Sunday.

Tuesday.

Above sixteen - - - - 10 ounces suet pudding.
Under sixteen - - - - 8 „ „ A liberal supply of potatoes.

Wednesday.

1 pint pea soup. Bread same as Sunday.

Thursday.

Above sixteen - - - - 9 ounces bread; 1½ ounces cheese.
Under sixteen - - - - 8 „ „ 1 „ „
Under fourteen - - - - 6 „ „ 1 „ „

Friday.

Irish stew. Allowing about three ounces of meat for each boy. A liberal supply of potatoes.

Saturday.

Bread and cheese same as Thursday.

Breakfast.		*Supper.*	
Above sixteen - - -	10 ozs. of bread.	Above sixteen - - -	10 ozs. of bread.
Fourteen and under sixteen -	9 „ „	Fourteen and under sixteen -	9 „ „
Under fourteen - - -	7 „ „	Under fourteen - - -	7 „ „

Miss Carpenter recommends the following dietary:—

Breakfast at 8.0 or 8 30.—One pint of cocoa, coffee, or milk and water; one third new milk. Bread, eight ounces, boys—six ounces girls or boys under twelve years of age, or one pint of thick oatmeal porridge. Four ounces of bread boys—three ounces girls or younger boys.

Dinner at 1.0 or 1.30.—Four ounces cooked meat with a plateful of vegetables; boys—three ounces cooked meat and vegetables; girls and younger boys. Two days—three ounces bacon and vegetables. Two days—one pint thick pea soup made with meat, six ounces bread for boys; four ounces, girls and younger boys. Two days—one pound and a quarter suet or other substantial pudding; boys, one pound, girls and younger boys. Bread and cheese, with salad, if convenient, may be substituted one day in the week.

Supper at 5.0 or 5 30.—One pint milk and water, one third new milk, or one pint cocoa—eight ounces bread boys—six ounces girls and younger boys.

Sunday.—Coffee, with bread and butter.

WORK.

Boys.

6.0 —Read private prayers; washing and dressing; beds turned down.
6.30—School.
8.0 —Family worship; breakfast and play.
9.0 —Work in garden-classes; tailoring, shoemaking, &c.
12.45—Wash and prepare for dinner.
1.0 —Dinner and play.
2.0 —Work as before; those in the forenoon indoors, now in garden.
4.45—Wash and prepare for supper.
5.0 —Supper and play.
6.0 —School and family worship.
8.0 —Bed.

Girls.

6.0 —Read private prayers; wash and dress; beds turned down.
6.30—Prep[illegible]ns of sewing and knitting; learning hymns and reading.
8.0 —Fami[illegible]up and breakfast.
9.0 —Housework for the whole school.
10.0 —School; older girls at washing.
12.30—Play in the garden.
1.0 —Dinner and play.
2.0 —Sewing.
5.0 —Supper and play.
6.0 —Knitting—older girls in school; family worship.
8.0 —Bed.

Appendix E.

SPECIAL REPORTS ON REFORMATORIES INSPECTED BY MR. SYMONS.

Kingswood Reformatory School for Boys, near Bristol.

I inspected this school for the first time on the 7th of October 1856. G. H. Bengough, Esq., who superintends this establishment, and one or two of the committee, were present. There were 40 boys, of whom 19 were over 14 years of age.

The premises consist of a large building erected originally as a college for young Wesleyan ministers, by Wesley himself. It was purchased for its present use, for which it is fairly adapted, in 1852, by R. Scott, Esq., of Bath.

The rooms downstairs are ample for the purposes of the institution. The dormitories are sufficiently large, and I am happy to be able to report, that each boy occupies a separate bed, and that each is completely screened from the rest by high partitions on either side of each bed, open only at the foot. This is a most essential arrangement, but one, I regret to say, nowhere else adopted, to the best of my knowledge in this district. It reflects great credit on the good feeling and sound discretion of the managers.

The dormitories are insufficiently ventilated. The windows are at the head of the beds, where they are certain to be kept closed at night. I recommended the perforated tubes invented by Sir John Walsham, and I was glad to hear that the surgeon had just also called attention to the want of ventilation; and this defect will be remedied.

The land (ten acres) consists of about six acres under spade, and four of meadow. The arable land is a light loam, highly unsuitable to the great purpose of hard labour. To dig it requires little muscular exertion. This is, perhaps, the greatest drawback to the whole establishment. Next to it is the fact, that there is a common footpath through the field, constantly traversed by the public. I recommended double digging as a means of giving the boys that hard work which is, in my judgment, a *sine quâ non* to effectual reformation. I have, however, some apprehension that it may prove rather difficult now to achieve this desideratum. The boys were indulged in idleness, and greatly injured by the preceding master; so that Mr. Hartland deserves great credit for the amount of work and degree of discipline he has accomplished in so short a time; but still the bodily labour is far less than Mr. Bengough desires, and intends to achieve. I have recommended that rewards, in the shape of money payments, be given in proportion to work done, and it may be requisite to increase the staff of superintendents.

The agricultural management of the ground is somewhat defective. If cows and more pigs were kept the land would be more profitable and better manured, and other kinds of industry highly useful to them would be learned by the lads. The cultivation of wheat might be beneficially superseded by that of more root crops for cattle. Some additions and improvements to the tools used are also desirable. By these means, as experience has shown in union schools, the profit of the ground might be largely increased.

Accurate accounts should be kept of the land, and I shall be glad if a proper balance sheet be sent me yearly for insertion in my General Report, as it is useful to print such for general information.

The other industrial work is comprised by tailoring, in which nine boys are employed, and in shoemaking, which occupies four. Both seemed to be very well taught. Nearly all the clothes are made at the house.

Of the school instruction I can report with unqualified praise. It far exceeded my expectations, and such little defects as were apparent will readily and easily be corrected.

There are three strong cells varying in darkness for offenders, well ventilated and used whenever occasion requires.

I recommended that a better and more descriptive report be entered quarterly, if not oftener, of the conduct and progress of each inmate.

On the whole I was assured that the progress in reformation was satisfactory, but more detailed information on this all-important subject should, I venture to suggest, be regularly registered both as a motive to the lads and for information and reference for the guidance of the committee.

RED LODGE REFORMATORY FOR GIRLS AT BRISTOL.

29 *October* 1856.

This reformatory having been more than once inspected and reported on by my colleagues, I need not describe its characteristics or detail its peculiar merits.

I visited it on the 8th instant, and the schedule gives all the statistics which will be requisite to enable my Lords to adjudicate the grants requested by the manager in her letter of the 9th instant annexed hereto.

The total number of girls was thirty-eight, of whom twelve were over fourteen years of age. Only eleven had been more than one year at the house.

The firm but kind discipline maintained here, and the excellent moral effect produced, are, I firmly believe, doing all that reformatory influences can do to reclaim a most depraved class of young female criminals.

The house arrangements are generally good. The only improvements I have to suggest are the introduction of perforated panes in some of the dormitories to improve the ventilation, and some means of giving the teacher more immediate inspection of the dormitory which adjoins her room. I think it essential that a superintendent should either sleep in each bedroom or have the means of seeing every part of it at any time without opening any door or shutter, and be able also to overhear conversation. The plan adopted at Kingswood of partitioning off each bed from the next is, however, also desirable, and I trust will soon be adopted in all reformatories.

The mental instruction of the girls is, on the whole, very satisfactory; and their intelligence and animation evince the pains that have been taken to improve their faculties as well as to instruct their minds. The chief defect is in arithmetic. None could cast money sums, and the mental arithmetic was capable of improvement.

The industrial employment consists of needlework, extremely good, and all kinds of household work, together with instruction in washing and ironing. Miss Carpenter is desirous of increasing the industrial employment, and, I think it may be advantageously done.

I have recommended that a careful entry be made in a register kept for that purpose of the mental, moral, and industrial progress of each girl, together with a record of any relapse or serious offences. I think that such a register, of which the inmates were made fully cognizant, would answer all the purposes of the marks of honor adopted at Mettray.

DEAR SIR, *Bristol*, 9 *October* 1856.

I TRANSMIT, at your request, the daily routine. You will perceive that there are employed at the Lodge a matron, a schoolmistress, a laundress, and two young persons of about eighteen years of age, whom I have apprenticed to myself as assistants, that they may be trained to give efficient help, both in industrial and school instruction. I do not consider this staff larger than is necessary for girls of so low and untrained a nature, especially as it is a fact well known to all persons of experience that girls of this class are far more difficult to manage than boys. Until I am able to devise some plan for a greater amount of *laborious* industrial work than I have at present, I do not require any additional apparatus; but I hope that the usual aid will be granted towards salaries and rent. I would also beg to apply for the 50*s*. per annum promised in the Minute of 2 June for children *not* paid for by the Treasury. I have had during the year thirteen such girls; there are now six in the school; the average number is nine and a half.

I remain, &c.

Jelinger C. Symons, Esq., H.M. Inspector of Schools. (Signed) MARY CARPENTER, Superintendent.

Red Lodge Girls' Reformatory.—Daily Routine.

The twelve older girls are employed in monthly rotation in the laundry and washhouse five days in the week, six at a time. Two girls are employed in the kitchen the greater part of every day, and one as house girl to answer the door, &c. Besides the above, and the hours occupied in the general clearing of the premises by all the girls every day, the scrubbing of all the rooms is performed by girls.

The girls walk out with the teachers three times a week, and attend the place of worship which is nearest to the school twice every Sunday.

The present number of girls is thirty-eight; three more were sentenced to come during this month, making the number requisite to receive a candidate into the school for training. The whole number for which the school is calculated is fifty.

Shelsley Reformatory (Worcestershire).

The building occupied by the school is an old farm-house healthily and beautifully situated, distant from any town locality, a mile from Shelsley Rectory, to which additions are about to be made in order to render it efficient for its purposes, and for the reception of more inmates. At present it is not adequate in my judgment to the requirements of a reformatory, even for eighteen boys (the present number), six of whom were over fourteen years of age.

The dormitories are in the attic, without ceiling, and are rather crowded and insufficiently ventilated, there being no sufficient egress for foul air aloft.

Spade husbandry and road-making form at present the only industrial occupations, the former being limited by the small quantity of garden ground now in occupation. It is, however, being well double-dug. Twenty-three acres are about to be rented, and cultivated by the inmates. They were reported to me as working on the whole cheerfully and well.

The moral influences can alone be effectually ascertained by the results. It is premature to form any judgment on this subject. The discipline of the heart, mind, and morals is chiefly entrusted to the Rev. Mr. Griffiths, a clergyman who who resides in the house. He spoke modestly, but hopefully of the prospect of success. I suggested a more descriptive and graduated record in the conduct-book, of the moral progress, character, industry, offences, and merits of each lad. I deem this an essential requisite in all reformatories; it is not sufficiently done in any I have yet inspected. It is due to the trainer, the managers, the inspectors, and especially to the inmates themselves,

The mental instruction was exceedingly good; it is always difficult to discriminate between what the lads knew before they came and what they have since learned. They had all entered very lately, and some knew but little; the others answered intelligently, both on religious and secular subjects, and the amount of instruction in the mechanical branches of reading, writing, &c., was above an average.

I look upon this establishment as prematurely commenced. I should have felt less anxious as to its success had it been delayed till the completion of the building. The fitting up of at least carpenters' and shoe shops, the possession of adequate land, cows, and pigs, and above all the securing of a sufficient staff, already increased. One boy has already absconded; I attach no weight to this as against the existing establishment. Such mishaps will sometimes occur; but it might have been prevented in all probability had the managers more appliances in land.

This reformatory receives convicted boys from the counties of Worcester and Hereford, and is in all respects an important experiment, and one to which I cannot but desire that a fair trial should be given.

Stokes Croft Training and Reformatory Institution.

This is a refuge for lads who have been convicted after they are discharged. It was established by a benevolent lady, Mrs. Reynolds, who has since left Bristol and resides in Liverpool. I found eight lads of an advanced age at the institution chiefly employed in carpentering. As this refuge does not receive a grant from the Committee of Council, it is not requisite to report specially upon it.
